| Guneral equations for the Source, problem | |
|--|----------|
| Preface | XIII |
| A aly now lad amounts | VV |
| Acknowledgements | AV |
| Notation and symbols | XVII |
| 1 Numerical simulation of very slow flows: an overview | 1 |
| 1.1 Rationale of modeling | 1 |
| 1.2 Thermo-mechanical models | 2 |
| 1.3 Elasticity and viscosity | 6 |
| 1.4 Cohesive forces versus stresses | 8 |
| 1.5 Relation between t and n: the stress tensor | 9 |
| 1.6 Regular, linearized problems | 11 |
| 1.7 Analytic methods | 13 |
| 1.8 The finite-difference method and the finite-element method | 14 |
| 1.9 Algorithm for computation | 16 |
| 1.10 Programming: some precautions | 16 |
| References | 18 |
| 2 Diffusion and advection of heat with a single space variable | 19 |
| 2.1 The temperature equation | 19 |
| 2.2 Closed form solutions without singular point | 21 |
| 2.3 Closed form solutions with a singular point at the origin | 22 |
| 2.4 Source functions | 24 |
| 2.5 Use of Laplace transforms | 27 |
| 2.6 Numerical computation | 28 |
| 2.7 Moving medium, steady regime | 31 |
| 2.8 Ice-sheet without bottom melting, sine oscillations of surface | |
| temperature | 32 |
| 2.9 Response to a Dirac impulse in the surface temperature References | 33 36 |
| | |

V

| 3 Rotation and strain. Invariants of stress and of strain rates | 37 |
|--|-----|
| 3.1 The finite rotation matrix | 37 |
| 3.2 Angular velocity vector | 40 |
| 3.3 Lagrangian and Eulerian descriptions | 41 |
| 3.4 Finite strain | 43 |
| 3.5 Strain rates | 44 |
| 3.6 Compatibility conditions | 46 |
| 3.7 Transformation of a tensor when the coordinate system is changed | 47 |
| 3.8 Dilatation. The case of an incompressible fluid | 49 |
| 3.9 Stress equations | 52 |
| 3.10 Inertia forces and Coriolis forces. Scale models | 53 |
| 3.11 Principal stresses and principal directions | 55 |
| 3.12 The stress deviator | 57 |
| 3.13 Invariants of stress and strain rate | 58 |
| 3.14 Shear stress on any plane | 60 |
| References | 62 |
| 4 Microscopic processes of creep | 63 |
| 4.1 The meanagenic point of view work hardening and green | 62 |
| 4.1 The inacroscopic point of view. work-nardening and creep | 67 |
| 4.2 The different space scales | 68 |
| 4.4 Displacement and multiplication of dislocations | 70 |
| 4.4 Displacement and multiplication of dislocations | 71 |
| 4.5 Distocation creep 4.6 Vacancies and self-interstitials | 73 |
| 4.7 Diffusional climb of edge dislocations | 75 |
| 4.8 Stacking faults and cross-slip | 77 |
| 4.9 Secondary creen of a polycrystal | 78 |
| 4.10 Crystal orientation and fabrics | 79 |
| 4 11 Kinking and twinning | 83 |
| 4.12 Diffusional creep | 85 |
| 4.13 Chalmers' microcreep and Harper–Dorn creep | 88 |
| 4.14 Pressure solution deformation | 89 |
| References | 90 |
| 5 Viscosity as a model for rocks creeping at high temperature | 93 |
| 5.1 Principles of continuum mechanics | 03 |
| 5.2 Most general viscous behavior, either isotropic or anisotropic | 94 |
| 5.3 Isotropic viscosity | 96 |
| 5.4 Field structure of rocks | 98 |
| 5.5 Pore pressure in rocks tectonic stresses and earthquakes | 100 |
| 5.6 Data for rock salt | 101 |
| 5.7 Data for Yule marble | 103 |
| 5.8 Data for quartzites | 103 |
| 5.0 Data for qualizities | 105 |

| 0 | | | 41.5 | | 400 |
|---|---|-----|------|----|-----|

| - | υ | 11 | 10 | 11 | 1.5 |
| | | | | | |

| 5.9 Hydrolytic weakening of quartz and silicates 10 | 5 |
|--|----|
| 5.10 Data for granite 10 | 6 |
| 5.11 Data for peridotites 10 | 7 |
| 5.12 Rheology of the Earth's upper mantle 10 | 9 |
| 5.13 Different kinds of polar ices 11 | 2 |
| 5.14 Data for mineral ice Ih, and for isotropic rock ice | 9 |
| 5.15 Textures in glaciers and recrystallization creep of multi-maxima ice 12 | 2 |
| References 12 | 5 |
| | |
| 6 Stokes' problems solved with Fourier transforms: isostatic rebound, | |
| glacier sliding | 1 |
| | |
| 6.1 Overview on viscous flows 13 | 1 |
| 6.2 General equations for the Stokes' problem | 2 |
| 6.3 Plane flow 13 | 4 |
| 6.4 Biharmonic functions 13 | 5 |
| 6.5 Fourier transforms | 7 |
| 6.6 Isostatic rebound with an isoviscous asthenosphere 13 | 8 |
| 6.7 Application to the glacio-isostatic uplift of Fennoscandia | 2 |
| 6.8 Sliding with melting-refreezing on a sine profile | 6 |
| 6.9 Sliding with melting refreezing on any microrelief | 0 |
| 6.10 Discussion of Nye's sliding theory | 12 |
| 6.11 Sliding without cavitation of power-law viscous ice 15 | 15 |
| 6.12 Temperatures at the microscopic scale, and permeability of | |
| temperate ice 16 | 0 |
| 6.13 A sliding theory which takes wetness and permeability into account 16 | 12 |
| References and moduling approval and to not root and tong the distance of 16 | 64 |
| 7 Open flow in a cylindrical channel of a power-law viscous fluid, and | |
| application to temperate valley glaciers | 57 |
| eferences | |
| 7.1 General equations for steady flow, when stresses and strain rates are | |
| x-independent 16 | 57 |
| 7.2 Is secondary flow possible? 16 | 59 |
| 7.3 Power-law viscosity: governing equation for the stress function, and | |
| analytical solutions | 11 |
| 7.4 Governing equation for the velocity, and singularities at the edges 17 | 13 |
| 7.5 Numerical computation 17 | 14 |
| 7.6 The inverse problem. Von Neumann's stability criterion 17 | 17 |
| 7.7 Kinematic waves on glaciers 18 | 30 |
| 7.8 Mathematical developments of the theory, and real facts 18 | 32 |
| 7.9 Empirical sliding laws | 34 |
| 7.10 Subglacial hydraulics | 36 |
| 7.11 Sliding law with cavitation | 39 |
| 7.12 Stability of a temperate glacier 19 | 2 |
| References 19 |)3 |
