Preface	xiii
Notation	xv
Introduction	xxiii
PART I ELECTRICAL AND ELECTROMAGNETIC LOGS	1
1 Electromagnetic Field	3
1.1 Fundamental Equations of the Electromagnetic Field	3
1.2 Direct-current Electric Field	6
1.3 Alternating-current Electromagnetic Field	9
2 Petrophysical Basis for Electrical and Electromagnetic Logs	17
2.1 Resistivity of Rocks	17
2.2 Naturally Occurring Polarization of Rocks	20
2.2.1 <i>Diffusion-Adsorption Activities of Rocks</i>	20
2.2.2 <i>Electrofiltration Activity of Rocks</i>	23
2.2.3 <i>Redox Activity of Rocks</i>	23
2.3 Induced Polarization of Rocks	24
2.4 Magnetic Properties of Rocks	25
3 Non-focused Electrical Logs	29
3.1 Apparent Resistivity Sondes	29
3.2 Methods for Direct Problem Solution	32
3.2.1 <i>Analytical Methods</i>	32
3.2.2 <i>Approximate Analytical Methods (Al'pin-Kashik's Method)</i>	41
3.2.3 <i>Electrolytic Modelling</i>	45
3.2.4 <i>Physical Lattice-point Modelling</i>	45
3.2.5 <i>Mathematical Lattice-point Modelling</i>	45
3.3 Apparent Resistivity Data Interpretation	47
3.3.1 <i>Apparent Resistivity Log Processing</i>	47
3.3.2 <i>Geophysical Interpretation of Apparent Resistivity Data</i>	48
3.3.3 <i>Geological Interpretation of Apparent Resistivity Data</i>	50

3.4	Apparent Resistivity Micromodifications	50
3.4.1	<i>Microresistivity Measurement</i>	50
3.4.2	<i>Mud Resistivity Log</i>	51
3.5	Current Log	51
3.5.1	<i>Single-electrode Current Log</i>	51
3.5.2	<i>Sliding-contact Log</i>	52
4	Focused Electrical Logs	53
4.1	Divergent Log	53
4.2	Laterolog	54
4.2.1	<i>Laterolog Versions</i>	54
4.2.2	<i>Control Conditions</i>	57
4.2.3	<i>Approximate Solution of the Direct Laterolog Problem</i>	58
4.2.4	<i>Influence of Borehole, Invaded Zone, and Surrounding Beds</i>	59
4.2.5	<i>Laterolog Responses</i>	60
4.2.6	<i>Microlaterolog</i>	60
4.2.7	<i>Applications of the Laterolog</i>	61
5	Electromagnetic Logs	63
5.1	Induction Log	63
5.1.1	<i>Physical Basis for the Induction Log</i>	63
5.1.2	<i>Theoretical Background for the Induction Log</i>	65
5.1.3	<i>Influence of Borehole, Invaded Zone, and Surrounding Beds</i>	67
5.1.4	<i>Applications of the Induction Log</i>	70
5.2	Electromagnetic Wave Logs	70
5.2.1	<i>Physical Basis for the Electromagnetic Wave Logs</i>	70
5.2.2	<i>Wave Conductivity Log</i>	71
5.2.3	<i>Dielectric Log</i>	71
5.2.4	<i>Propagation of Electromagnetic Waves Through Inhomogeneous Media</i>	72
5.2.5	<i>Wave Conductivity Log Responses</i>	73
5.3	Borehole Radiowave Method	73
5.3.1	<i>Physical Basis for the Borehole Radiowave Method</i>	73
5.3.2	<i>Borehole Radiowave Data Interpretation</i>	76
5.3.3	<i>Borehole Radiowave Equipment</i>	76
5.3.4	<i>Applications of the Borehole Radiowave Method</i>	77
6	Methods Based on the Electrochemical Activities of Rocks	79
6.1	Spontaneous Potential Measurement	79
6.1.1	<i>Physical and Chemical Bases for Spontaneous Potential Measurement</i>	79
6.1.2	<i>True SP Log</i>	81
6.1.3	<i>Applications of the SP Log</i>	83

6.2	Electrode Potential Log and Galvanic Couple Potential Log	84
6.2.1	<i>Electrode Potential Log</i>	84
6.2.2	<i>Galvanic Couple Potential Log</i>	84
6.3	Induced Potential Log	85
7	General Aspects of the Electrical and the Electromagnetic Logging Methods	87
7.1	Basis for Computer-assisted Geophysical Interpretation of the Apparent Resistivity, the Induction Log, and the Laterolog	87
7.2	Overcoming Solution Instability	89
PART II	SEISMOACOUSTIC LOGS	91
8	Elastic Wave Propagation Through Media of Infinite Extent	93
8.1	Equations of Acoustics	93
8.2	Elastic Waves in Single-phase Rocks	96
8.3	Elastic Waves in Multi-phase Rocks	99
9	Acoustic Waves in a Borehole	109
9.1	Methods for Solving the Direct Problem in Borehole Acoustics	109
9.2	Application of the Operator Method	110
9.3	Fluid Waves and Surface Waves in a Borehole	113
9.4	Head Waves in a Borehole	116
9.5	Influence of Inhomogeneities Close to the Borehole on the Head-wave Parameters	120
10	Acoustic Logging	123
10.1	Acoustic Logging Tools	123
10.1.1	<i>Two-component Acoustic Logging Tool</i>	123
10.1.2	<i>Three-component Acoustic Logging Tools</i>	124
10.1.3	<i>Four-component Acoustic Logging Tool</i>	125
10.1.4	<i>Multi-component (Array) Acoustic Logging Tools</i>	126
10.2	Recording Format for the Acoustic Log	127
10.3	Applications of the Acoustic Log	129
10.3.1	<i>Acquisition of Data Necessary for Seismic Data Interpretation</i>	129
10.3.2	<i>Lithological Acoustic Log</i>	133
10.3.3	<i>Elastic Moduli Evaluation</i>	134
10.3.4	<i>Reservoir Identification, Evaluation of Porosity and Type of Pore Space</i>	134
10.3.5	<i>Cement-bond Evaluation</i>	135
10.3.6	<i>Identification of Ore-bearing Zones</i>	136
10.4	Major Components of Acoustic Log Equipment	136
10.4.1	<i>Electroacoustic Loop</i>	136
10.4.2	<i>Transmitters and Receivers</i>	137
10.4.3	<i>Acoustic Isolators</i>	137

11	Acoustic Reflection Logging	139
11.1	Acoustic Caliper Log	139
11.2	Acoustic Borehole Cross-section Log	139
11.3	Borehole Televiewer	140
11.4	Reflection Cement-bond Log	140
12	Borehole Seismic Acoustic Logging	141
12.1	Seismic Logging	141
12.2	Vertical Seismic Profiling	142
12.2.1	<i>Physical Basis for Vertical Seismic Profiling</i>	142
12.2.2	<i>Methods for Processing Vertical Seismic Profiling Data</i>	143
12.2.3	<i>Vertical Seismic Profiling Equipment</i>	144
12.3	Cross-borehole Sounding	145
12.3.1	<i>Physical Basis for Cross-borehole Sounding</i>	145
12.3.2	<i>Propagation of Elastic Waves Through a Fast Formation</i>	145
12.3.3	<i>Propagation of Elastic Waves Through a Thin Slow Formation</i>	145
12.3.4	<i>Influence of Arbitrarily-shaped (Isomeric) Inhomogeneities</i>	146
12.3.5	<i>Cross-borehole Sounding Procedures</i>	146
PART III NUCLEAR PHYSICAL LOGS		149
13	Interactions of Ionizing Radiations With Matter	151
13.1	Basic Definitions	151
13.2	Interactions of Gamma Rays With Matter	154
13.3	Neutron Interactions With Matter	157
14	Methods for Direct Problem Solutions for Nuclear Physical Logs	161
14.1	Kinetic Equation	161
14.2	Approximate Analytic Methods in Neutron and Photon Transport Theory	163
14.2.1	<i>Build-up Factor Method</i>	163
14.2.2	<i>Diffusion Approximation</i>	163
14.2.3	<i>Age Approximation</i>	168
14.2.4	<i>Group Method</i>	169
14.3	Modelling of Nuclear Physical Log Problems	170
14.3.1	<i>Experimental Modelling</i>	171
14.3.2	<i>Numerical Modelling</i>	171
15	Major Components of Nuclear Logging Equipment	173
15.1	Types of Nuclear Logging Equipment	173
15.2	Sources of Gamma Rays and Neutrons	174
15.3	Radiation Detectors	176
15.3.1	<i>Gas-ionization Detectors</i>	176
15.3.2	<i>Scintillation Counters</i>	176
15.3.3	<i>Semiconductor Detectors</i>	177
15.4	Counting Ratemeters	178

16	Gamma-ray Log	181
16.1	Radioactivity of Rocks	181
16.2	Approximate Solution to the Direct Problem in the Integral Gamma-ray Log	182
16.2.1	<i>Homogeneous Media</i>	182
16.2.2	<i>Piecewise Homogeneous Media</i>	184
16.3	Gamma-ray Log Data Processing and Interpretation	186
16.4	Application of the Gamma-ray Log	187
16.5	Spectral Gamma-ray Log	188
17	Gamma–Gamma Log	191
17.1	Density Gamma–Gamma Log	191
17.1.1	<i>Physical Basis for the Density Gamma–Gamma Log</i>	191
17.1.2	<i>Direct Problem for the Density Gamma–Gamma Log</i>	193
17.1.3	<i>Applications of the Density Gamma–Gamma Log</i>	195
17.2	Selective Gamma–Gamma Log	196
18	X-ray Radiometric Log	199
18.1	Physical Basis for the X-ray Radiometric Log	199
18.2	Applications of the X-ray Radiometric Log	201
19	Neutron Log	203
19.1	Types of Neutron Log	203
19.2	Petrophysical Basis for the Neutron Log	204
19.3	Results of the Solution of Direct Problems with the Neutron Log	206
19.3.1	<i>Spatial Distributions of Epithermal Neutrons, Thermal Neutrons, and Capture Gamma Rays in Homogeneous Media</i>	206
19.3.2	<i>Spatial Distributions of Epithermal Neutrons, Thermal Neutrons, and Capture Gamma Rays in the Borehole–Formation System</i>	208
19.3.3	<i>Single-spaced Neutron Log Responses</i>	211
19.4	Porosity Evaluation from the Single-spaced Neutron Log Response	211
19.5	Physical Basis for Multiple-spaced Neutron Logs	212
19.6	Spectral Neutron–Gamma Log	214
19.7	Applications of Neutron Log	215
20	Pulsed Neutron Logs	219
20.1	Physical Basis for the Pulsed Neutron–Neutron Log and the Pulsed Neutron–Gamma Log	219
20.2	Applications of the Pulsed Neutron Log	222
20.3	Pulsed Neutron–Inelastic Scattering Gamma Log	223
21	Gamma–Neutron and Neutron-activation Logs	225
21.1	Gamma–Neutron Log	225
21.2	Activation Log	226

PART IV	TEMPERATURE, MAGNETIC, AND GRAVITY LOGS	229
22	Temperature Log	231
22.1	Thermophysical Parameters of Rocks and Their Relationships with Thermal Field Parameters	231
22.2	Thermal Fields in and around the Borehole	234
22.2.1	<i>Regional Geothermal field</i>	234
22.2.2	<i>Local Thermal Fields</i>	236
22.2.3	<i>Steady-state and Transient Thermal Fields</i>	237
22.3	Temperature Measurement Procedures, Instruments, and Applications	237
22.3.1	<i>Temperature Measurement Procedures</i>	237
22.3.2	<i>Major Components of Downhole Thermometers</i>	238
22.3.3	<i>Applications of the Temperature Log</i>	239
23	Magnetic Logs	241
23.1	Magnetic Field Log	241
23.1.1	<i>Geomagnetic Field</i>	241
23.1.2	<i>Magnetic Field of a Magnetized Body</i>	242
23.1.3	<i>Major Components of the Magnetic Field Log Equipment</i>	246
23.1.4	<i>Applications of the Magnetic Field Log</i>	246
23.2	Magnetic Susceptibility Log	247
23.3	Nuclear Magnetic Log	248
24	Borehole Gravimetry	253
24.1	Physical Basis for Borehole Gravimetry	253
24.2	Downhole Gravity Equipment	258
24.3	Downhole Gravity Measurements and Data Interpretation	259
24.4	Applications of Borehole Gravimetry	260
PART V	MEASUREMENT WHILE DRILLING	263
25	Methods Involving the Use of Drilling Equipment	265
25.1	Drill-transported Log	265
25.2	Analysis of Drilling Parameters	267
25.2.1	<i>Drilling Time Log</i>	267
25.2.2	<i>Energy Consumption Log</i>	268
25.2.3	<i>Dynamic Filtration Log</i>	269
25.3	Acoustic Log while Drilling	269
26	Hydrocarbon Mud Log	273
26.1	Physical and Chemical Bases for the Hydrocarbon Mud Log	273
26.2	Hydrocarbon Mud Log Practice and Equipment	274
26.2.1	<i>Hydrocarbon Mud Log Practice</i>	274
26.2.2	<i>Hydrocarbon Mud Log Equipment</i>	275
26.3	Applications of the Hydrocarbon Mud Log	276

PART VI APPLICATIONS	277
27 Inspection of the Technical Condition of Boreholes	279
27.1 Directional Surveying	279
27.2 Caliper Log	280
27.3 Cement-bond Evaluation	281
27.4 Fluid Movement in and around a Borehole	282
28 Oil and Gas	283
28.1 Prospection and Exploration for Oil and Gas	283
28.1.1 <i>Lithology Distinction</i>	283
28.1.2 <i>Reservoir Identification</i>	288
28.1.3 <i>Nature of Reservoir Saturation</i>	289
28.1.4 <i>Hydrocarbon Saturation</i>	290
28.1.5 <i>Porosity</i>	291
28.1.6 <i>Effective Thickness</i>	292
28.1.7 <i>Typical and Normal Geology–Geophysical Sections</i>	293
28.1.8 <i>Borehole-to-borehole Correlation of Log Data and Cross-borehole Sections</i>	293
28.2 Control of Hydrocarbon Development	294
28.2.1 <i>Oil–Water, Gas–Oil, and Gas–Water Contacts</i>	294
28.2.2 <i>Control of Injection Water</i>	294
29 Coal and Ore	297
29.1 Coal	297
29.1.1 <i>Physical Properties</i>	297
29.1.2 <i>Applications of Logs in the Prospecting and Exploration Phases for Coal</i>	298
29.2 Ore	300
29.2.1 <i>Ferrous Metal Ores</i>	301
29.2.2 <i>Non-ferrous Metal Ores</i>	302
30 Conclusions	305
Appendix	307
A.1 Vector Algebra Elements	307
A.2 Elements of the Theory of Elasticity	309
A.3 Operator Method for Solving Partial Differential Equations	311
References	313
Index	317
