TABLE OF CONTENTS

Abstract	
Acknowledgements	1
Table of Contents	ii
List of Figures	vii
List of Tables	x
1. INTRODUCTION	1
2. THE GOVERNING EQUATIONS	
2.1 Derivations and Assumptions	8
2.1.1 General Comment	8
2.1.2 The Equation of Fluid Continuity	9
2.1.3 The Equation of Momentum Conservation	11
2.1.4 The Equation of Conservation of Sediment Mass	13
2.1.5 Closure Relations	14
2.1.6 The Significance of Individual Terms	21
2.1.7 Summary of Assumptions Associated with the Governing Equations	23
2.1.8 Concluding Comment	24
2.2 Determination of the Characteristic Wave Speeds	24
2.2.1 The Full System of Equations	24
2.2.2 First Order Explicit Expressions	29
2.2.3 A Perturbation Solution for the Characteristic Speeds	30

3. METHODS OF SOLVING THE GOVERNING EQUATIONS	
3.1	Coupled and Decoupled Solutions 36
3.2	Linear and Nonlinear Solutions 39
3.3	Typical problems Encountered in Sediment Flood Routing 40
3.4	Current Techniques for Solving the Equations 41
3.4.1	General Comment 41
3.4.2	HEC-6 42
3.4.3	Constant Discharge Model 43
3.4.4	FLUVIAL-II 44
3.4.5	IALLUVIAL 46
3.4.6	Full Coupled System 47
3.5	Concluding Remark 47
4. AN ALTERNATIVE ALGORITHM FOR THE NUMERICAL SOLUTION OF THE GOVERNING EQUATIONS	
4.1	An Outline of the Technique 50
4.2	Arrangement of the Equations in Characteristic Form 51
4.3	Riemann Invariants and the Physical Interpretation of Characteristics 56
4.4	Boundary and Initial Conditions 59
4.4.1	General Requirements 59
4.4.2	The Upstream Boundary Condition 61
4.4.3	The Downstream Boundary Condition 63
4.5	Concluding Remarks 64
5. EXPERIMENTAL INVESTIGATION OF UNSTEADY SEDIMENT TRANSPORT	

5.1 Purpose of Experimental Work	67
5.2 Previous Unsteady Sediment Transport Experiments	68
5.3 Experimental Apparatus	69
5.3.1 The Flume	69
5.3.2 Inlet Conditions	73
5.3.3 Outlet Conditions	73
5.3.4 The Sand Feeder	73
5.3.5 Water Discharge Measurement	74
5.3.6 Sediment Discharge Measurement	76
5.3.7 Settling Tank	78
5.3.8 Measurement of Water Surface Elevations	78
5.3.9 Bed Leveller	81
5.3.10 Measurement of Slope	83
5.3.11 Choice of Sand	83
5.4 Development of a Bed Profiler for Transient Flows	84
5.4.1 General Comment	84
5.4.2 Point Gauge Bed Profiles	84
5.4.3 Sonic and Ultrasonic Depth Sounders	87
5.4.4 Electronic Profile Indicator (EPI)	87
5.4.5 Considerations for Alternative Means of Measuring Bed Profiles	88
5.4.6 A New Bed Profiler Design	89
5.4.6.1 Basic Components	89
5.4.6.2 Electronic Amplifier and Filter Circuits	93

5.4.6.3 Calibration of Bed Profiler	94
5.4.7 Concluding Remarks	97
5.5 Data Acquisition System	98
5.6 Summary of Accuracy in Measured Parameters	99
5.7 Sidewall Correction Procedure	101
5.8 Experimental Procedure: Equilibrium Conditions (Series I)	103
5.9 Experimental Procedure: Bed Wave Propagation (Series II)	104
5.10 Experimental Procedure: Temporal Resistance Variation (Series III)	105
6. ANALYSIS AND DISCUSSION OF RESULTS ..	
6.1 Experimental Results: Equilibrium Conditions (Series I)	107
6.1.1 Concentration Predictor	107
6.1.2 Change in Regime	109
6.2 Experimental Results: Bedwave Propagation (Series II)	113
6.3 Experimental Results: Temporal Resistance Variation (Series III)	127
6.3.1 General Comment	127
6.3.2 Presentation of Results	130
6.3.3 Primary Variation in Depth	130
6.3.4 Secondary Depth Variation	146
6.4 Concluding Comments	150
7. CONCLUSION	151
References	155
List of Symbols	163
Appendix I: Experimental Results, Steady Equilibrium Conditions	168

Appendix II: Experimental Results, Bed Wave Propagation	170
Appendix III: Experimental Results, Temporal Variation of Friction Factor	181
Appendix IV: Analysis of Noise in the Transducer System	194
Appendix V: Stability and Convergence of Algorithms	200
V.1 General Comment	201
V.2 Order of Accuracy, Consistency and Convergence	202
V.3 Fourier Mode Analysis	204
V.4 Applications and Limitations of the Fourier Mode Analysis	210
V.5 The Matrix Method	215
V.6 Necessary and Sufficient Stability Conditions	220
V.7 Summary of Stability Analyses	221
Appendix VI: The Phase Shift between Surface and Bed Waves	223
