**Salmonid spawning gravels: A geomorphic perspective on their size
distribution, modification by spawning fish, and criteria
for gravel quality**

Kondolf, George Mathias, Ph.D.

Table of Contents

Title Page.....	i
Abstract.....	ii
Acknowledgements.....	iv
Table of Contents.....	viii
List of Tables.....	xi
List of Figures.....	xiv
List of Appendices.....	xviii
Chapter 1: Introduction.....	1
Purpose of this study.....	1
Attributes of gravel size distributions and their measures.....	4
Background information on salmonids.....	10
Chapter 2: Role of gravel in salmonid life histories.....	15
Spawning in salmonid life histories.....	15
Gravel requirements at spawning, incubation, and emergence.....	24
The problem of fine sediment in spawning gravels.....	31
Influence of stream-groundwater interactions.....	34
Other effects of fine sediment.....	39
Chapter 3: A geomorphic perspective on fine sediment in spawning gravels.....	40
Geomorphic controls on the distribution of spawning gravels.....	40
The geologic perspective	41
Infiltration of fine sediment into gravel beds.....	45
Laboratory experiments.....	45
Field observations.....	50
Winnowing of fine sediment from stable gravel beds.....	52
Depositional explanations for fine sediment in gravel.....	53
Bimodality of gravel size distributions.....	54
The infiltration school.....	55
Open-work gravel.....	58
Armor and pavement.....	59
Segregation of sand and gravel sheets.....	61
Simultaneous gravel and sand bedload transport and deposition.....	61
Flushing fine sediments from spawning gravels.....	65
Chapter 4: Methods of sampling spawning gravels.....	68
Surface methods of sampling spawning gravels.....	69
Visual estimates.....	70
Photographic methods.....	71
Grid sampling.....	73
Subsurface sampling.....	80
Analysis of bulk gravel samples.....	83

Adequate sample weight and exclusion of large particles.....	87
Comparison of surface methods.....	92
Comparison of subsurface methods.....	94
Recommended sampling procedures.....	102
Chapter 5: Reporting the results of gravel size analyses...	105
The problem of single-variable descriptors.....	105
Reporting of spawning gravel size in the fisheries literature.....	106
Percent fines.....	107
The geometric mean and the fredle index.....	109
Chapter 6: The size distribution of salmonid spawning gravels.....	116
Problem statement.....	116
Methods.....	118
Limitations of the data.....	140
Definition of tails.....	140
Spatial and temporal variability.....	142
Influence of study site selection.....	144
Results and discussion.....	146
Presentation of data.....	146
General properties of spawning gravel size distributions.....	154
Comparison of spawning gravels with fluvial gravels reported in the geological literature.....	158
Modality of gravels.....	160
Influence of mean size on other properties.....	161
Influence of fine sediment content on other properties.....	164
Influence of fish size on redd characteristics.....	165
Implications of results for indices of gravel quality.....	178
Chapter 7: Size Modification by Spawning Fish.....	184
Introduction.....	184
Methods.....	185
1985-1986 Studies: general procedure.....	189
Selection of redds.....	189
Velocity and depth measurements.....	191
Gravel sampling.....	192
Gravel size analysis.....	194
Channel surveys.....	196
1953 Studies (Chambers et al. 1954).....	197
Procedures.....	197
Data available for analysis.....	198
Conversion of data to standard form.....	201
Computation of variables.....	203
Statistical analysis.....	204

Results and discussion.....	205
Overview of gravel size modification.....	205
Results of field studies.....	216
Relation between initial and spawned conditions.....	221
Size modification related to initial size and flow conditions	226
Conclusions.....	228
Chapter 8: Application of Criteria for Gravel Quality.....	231
Introduction.....	231
Assessment of framework size.....	232
Assessment of fine sediment content.....	235
Adjustment for modification during spawning.....	248
Exclusion of large rocks.....	249
Assessment of potential spawning gravels: Examples.....	250
Owens River tributaries.....	250
Nantahala River, NC	259
Discussion.....	264
Chapter 9: Conclusions	266
References Cited.....	274
Appendices.....	294
Vita.....	396
