

Ground Movements and Structures

Proceedings of the 4th International Conference
held at The University of Wales College of Cardiff,
8–11 July 1991

Edited by
Emeritus Professor James D Geddes
The University of Wales College of Cardiff

Sponsored by
The Division of Civil Engineering, UWCC
in association with
The Institution of Civil Engineers

PENTECH PRESS
London

CONTENTS

SESSION I

- *The causes, magnitudes and control of ground movements in fills
J A Charles Invited Paper 3
- A large scale in-situ test to investigate the mechanical characteristics of the backfilled soil and rock from a surface mining operation
I Luker and J A Wates 29
- Land reclamation by opencasting - case study of ground movement within development areas
N J Waite and C V Knipe 42
- Long term performance of houses built on opencast ironstone mining backfill at Corby, 1975-1990
D Burford and J A Charles 54
- Investigation of hydraulically placed PFA as a foundation for buildings
C Humpheson, B Simpson and J A Charles 68

SESSION II

- Ground movements associated with trenchless pipelaying operations
D N Chapman and C D F Rogers 91
- A stress estimation method for town gas pipelines
Y Ogawa and S Oka 108
- An experiment on the circumferential deformation of buried steel pipelines subjected to vehicle loads
N Takagi 123
- Modelling surface impulse loading on buried structures
M C R Davies 138

Analysis of traffic influence on underground shallow gas pipelines R Ciesielski and A Zieba	156
Monitoring flood defences using satellite positioning systems A H Dodson and C V Cleasby	168
The monitoring of ground movements and their effects on surface structures - a series of case histories P M Wilde and J M Crook	182

SESSION III

Ground movement due to the mining of thick coal seams at shallow depths and its effect on surface structures L Holla	193
The law governing dynamic subsidence, tilts and curvatures over a working face during mining H Leting	209
Subsidence prediction over room and pillar mining systems I Wilson	223
The asymmetry of movements produced at the ground surface by the mining of a horizontal seam J Zych	243
Evaluation of the parameters for use with statistic-integral theories of predicting the influence of mining extraction based on Zych's method P Strzalkowski	255
Identification of the model and parameters of mining subsidence and their practical use Z Yulun, C Shu, S Guanghan and W Ge	266
Deformation analysis of embankments in mining areas L Litwinowicz	280
Don Valley stadium, Sheffield, UK A B Hawkins, S Morley, T S Swainson and D M Tyson	283

SESSION IV

*Dynamic mining influences on surface structures - analysis and methods of evaluation R Ciesielski	Invited Paper 305
---	-------------------

Computer program for use in designing masonry buildings in a subsidence region Z Jian and L Monglin	338
The protection of existing buildings subjected to large ground movements M Kawulok	344
Study of deformation resistant structural systems for buildings in coal mining areas C Jixian and H Leting	356
Wall structures affected by the static effects of mining operations L Fedorowicz and J Fedorowicz	370
The establishment and analysis of a three-dimensional finite element model for brick buildings subjected to ground deformation due to mining Y Shunchen and Z Jishou	383
Mining ground movements and tied portal frames J D Geddes and D Kennedy	396
Safeguarding structures in subsidence areas J Jung and H H Jung	411
Research on sliding layers for buildings subjected to mining subsidence Y Gang, Z Guoquan and C Jixian	430
Ground conditions at Lion Salt Works site, Marston, Cheshire S Adams, P A Hart and P W McDowell	443

SESSION V

*Prediction of ground movements in partially saturated soils A Gens, E E Alonso, F Batlle and A Lloret Invited Paper	461
Seasonal foundation movements in London clay T J Freeman, D Burford and M S Crilly	485
Soil moisture studies and buried pipes R C Owen, S W Rees and H R Thomas	502
The lateral extension of structures built on shrinkable clay D W Cox	519
Moisture induced collapse effects on earth embankments T D Smith, C E Deal, M Denham and R Jacobson	535

SESSION VI

Deformation of subaqueous reinforced embankments G E Bauer	553
Ground induced loading of a bored pile T J Freeman, G Price and M S Crilly	568
Pile failure due to downdrag caused by collapse settlements B P Wrench and A J Barrett	587
In situ testing to estimate foundation performance in difficult soils G E Bauer, S J Kennedy and A Tanaka	598
Load-settlement behaviour of the Fairtower (Messturm) in Frankfurt/Main H Sommer and H Hoffmann	612
Designing foundations on clay to limit immediate movements M D Bolton and H W Sun	628
Long term observations of surface vibrations for evaluation of their influence on structures R Ciesielski and M Pieronek	642
The effects of ground movement and seismic and dynamic forces on the design, construction and behaviour of reinforced earth structures G T Boot	660

SESSION VII

*Tunnelling induced ground movements; predicting their magni- tude and effects B M New and M P O'Reilly	Invited Paper 671
Grouting to reduce ground settlements due to shield tunnelling Y S Fang, M D Pan and G J Lin	698
Ground movements around tunnels excavated in Milwaukee, USA, using slurry shield and earth pressure balance methods R C Ilsley, S H Hunt, V E Komurka, B R Doyle and J Ramage	714
Shoring systems and performance, BCE Place, Toronto, Canada T G Orpwood	738
Landslide stabilization using drilled shaft walls K M Rollins and R L Rollins	755

Stability of excavation slopes in surface lignite mining at Visonta, Hungary I Kabai, L Madai and I Molnar	771
Case history of stability in spoil heaps of opencast lignite mines I Kabai, L Madai and I Molnar	786
DISCUSSION	799
