Boca Raton, Florida

Contents

| | |
|---|-----------|
| 1 Vibro techniques | 1 |
| M.P. MOSELEY and H.J. PRIEBE | |
| 1.1 Introduction | 1 |
| 1.2 Vibro techniques | 1 |
| 1.3 Vibro equipment | 4 |
| 1.4 The vibro compaction process | 6 |
| 1.5 The vibro replacement process | 7 |
| 1.6 Vibro design concepts | 8 |
| 1.7 Control and verification of the vibro techniques | 14 |
| 1.8 Vibro systems and liquefaction | 15 |
| 1.9 Conclusions | 19 |
| 2 Dynamic compaction | 20 |
| B.C. SLOCOMBE | |
| 2.1 Introduction | 20 |
| 2.2 History | 20 |
| 2.3 Plant and equipment | 20 |
| 2.4 Terminology | 22 |
| 2.5 How dynamic compaction works | 23 |
| 2.5.1 Granular soils | 23 |
| 2.5.2 Cohesive soils | 26 |
| 2.6 Depth of treatment | 28 |
| 2.7 Environmental considerations | 30 |
| 2.8 Practical aspects | 32 |
| 2.9 Induced settlement | 33 |
| 2.10 Additional comments | 34 |
| 2.11 Testing | 35 |
| 2.12 Case histories | 37 |
| 2.13 Concluding remarks | 39 |
| 3 Band drains | 40 |
| S. HANSBO | |
| 3.1 Introduction | 40 |
| 3.2 Development | 41 |
| 3.2.1 From cardboard wick to band drains | 41 |
| 3.2.2 Proprietary drains | 43 |
| 3.3 Design of drain installations | 44 |
| 3.3.1 Background | 44 |
| 3.3.2 Comparison with rigorous solutions | 46 |
| 3.3.3 Multilayer systems | 47 |
| 3.3.4 Consolidation equation based on non-Darcian pore water flow | 47 |
| 3.3.5 Influence of vertical pore water outflow between the drains | 48 |
| 3.3.6 Partially penetrating drains | 49 |

| | | |
|----------|--|------------|
| 3.4 | Construction and plant | 49 |
| 3.4.1 | Construction | 49 |
| 3.4.2 | Plant | 52 |
| 3.5 | Application and limitations | 54 |
| 3.5.1 | General aspects | 54 |
| 3.5.2 | Well resistance | 55 |
| 3.5.3 | Filter characteristics | 56 |
| 3.5.4 | Equivalent diameter of band drains | 57 |
| 3.5.5 | Coefficient of consolidation | 57 |
| 3.5.6 | Zone of smear | 58 |
| 3.6 | Checking the rate of consolidation | 58 |
| 3.7 | Case histories | 59 |
| 3.7.1 | Pilot test at Porto Tolle, Italy | 59 |
| 3.7.2 | Pilot test at Örebro, Sweden | 61 |
| 3.7.3 | Pilot test at Tianjin harbour, China | 62 |
| 4 | Lime stabilization | 65 |
| | B.B. BROMS | |
| 4.1 | Introduction | 65 |
| 4.2 | Applications of the lime column method | 67 |
| 4.3 | Stabilization of soft clay or silt with lime | 71 |
| 4.4 | Bearing capacity of lime columns | 73 |
| 4.5 | Lime columns as the foundation of structures | 76 |
| 4.6 | Settlements of lime columns | 80 |
| 4.7 | Stabilization of embankments with lime columns | 89 |
| 4.8 | Slope stability | 89 |
| 4.9 | Stability of trenches | 90 |
| 4.10 | Laboratory and field investigations | 94 |
| 4.11 | Control methods | 97 |
| 5 | Chemical grouting | 100 |
| | G.S. LITTLEJOHN | |
| 5.1 | Historical introduction | 100 |
| 5.2 | Ground investigation | 105 |
| 5.3 | Principles of injection | 106 |
| 5.3.1 | Permeation of porous ground | 106 |
| 5.4 | Grout systems | 109 |
| 5.4.1 | Grout selection | 109 |
| 5.4.2 | Viscosity | 113 |
| 5.4.3 | Setting time | 114 |
| 5.4.4 | Stability | 115 |
| 5.4.5 | Strength of grouted formation | 116 |
| 5.4.6 | Creep of grouted formation | 118 |
| 5.4.7 | Resistance of grout to extrusion | 118 |
| 5.4.8 | Permeance | 119 |
| 5.4.9 | Health and safety aspects | 120 |
| 5.5 | Grouting operations | 121 |
| 5.6 | Applications | 123 |
| 5.6.1 | Dams | 124 |
| 5.6.2 | Tunnels | 124 |
| 5.6.3 | Drifts and shafts | 124 |
| 5.6.4 | Excavations | 128 |

| | | |
|----------|---|------------|
| 5.6.5 | Underpinning | 128 |
| 5.7 | Conclusions | 129 |
| 6 | Compaction grouting | 131 |
| | R. RUBRIGHT and J. WELSH | |
| 6.1 | Introduction | 131 |
| 6.2 | History and development | 132 |
| 6.3 | Applications and limitations | 133 |
| 6.3.1 | How compaction grouting works | 137 |
| 6.3.2 | Applicable soil conditions | 137 |
| 6.4 | Design and construction | 139 |
| 6.4.1 | Design methods and parameters | 139 |
| 6.4.2 | Construction procedure | 142 |
| 6.4.3 | Quality assurance testing | 143 |
| 6.5 | Plant | 144 |
| 6.5.1 | Compaction grouting pumps | 144 |
| 6.5.2 | Mixing | 144 |
| 6.5.3 | Drilling | 145 |
| 6.5.4 | Extraction equipment | 146 |
| 6.5.5 | Miscellaneous equipment | 146 |
| 6.6 | Case histories | 146 |
| 6.6.1 | Office building, Kalamazoo, Michigan | 146 |
| 6.6.2 | Bolton hill tunnels, Baltimore, Maryland | 147 |
| 7 | Jet grouting | 149 |
| | A.L. BELL | |
| 7.1 | Introduction | 149 |
| 7.2 | The jet grouting process | 150 |
| 7.3 | Geometry and properties of soils treated | 155 |
| 7.4 | Properties of treated ground | 160 |
| 7.5 | Applications of jet grouting | 161 |
| 7.5.1 | Groundwater control | 161 |
| 7.5.2 | Underpinning | 163 |
| 7.5.3 | Tunnels and shafts | 166 |
| 7.6 | Case histories | 169 |
| 7.6.1 | Sizewell 'B' cofferdam | 169 |
| 7.6.2 | Birmingham, Alabama | 171 |
| 7.6.3 | Deutscher Herold Building, Bonn, Germany | 172 |
| 8 | Soilfracturing techniques for terminating settlements and restoring levels of buildings and structures | 175 |
| | A.W. RAABE and K. ESTERS | |
| 8.1 | Introduction | 175 |
| 8.2 | Injection technology and its effects | 177 |
| 8.3 | Soil stabilization | 179 |
| 8.4 | Raised buildings | 180 |
| 8.5 | Planning and monitoring | 182 |
| 8.6 | Case example for stabilization using soilfracturing | 184 |
| 8.7 | Example of a stabilization and raising project | 186 |
| 8.8 | Conclusions | 190 |

| | | |
|----------|------------------------------------|------------|
| 9 | <i>In situ</i> soil mixing | 193 |
| | P.S. TÓTH | |
| 9.1 | Introduction | 193 |
| 9.2 | History and development | 193 |
| 9.3 | Design | 195 |
| | 9.3.1 Ground conditions | 195 |
| | 9.3.2 Stabilizing agents | 197 |
| | 9.3.3 Properties of improved soils | 198 |
| 9.4 | Applications and limitations | 199 |
| 9.5 | Construction | 201 |
| | 9.5.1 The SMW and TSP method | 201 |
| | 9.5.2 The swing method | 201 |
| | 9.5.3 The dry jet mixing method | 201 |
| 9.6 | Testing procedure | 204 |
| 9.7 | Applications | 204 |
