

Structural Foundations Manual for Low-Rise Buildings

M.F. Atkinson,
CEng, FStructE, MICE

E & FN SPON

An Imprint of Chapman & Hall

London · Glasgow · New York · Tokyo · Melbourne · Madras

Contents

Preface	viii	2.7.4 Driven piles	50
Examples	ix	2.7.5 Driving precast piles	53
		2.7.6 Test loading	53
		Bibliography	66
1 Site investigations	1	3 Foundations in cohesive soils	67
1.1 Walk-over survey	1	3.1 Introduction	67
1.2 Desk study	2	3.2 Settlements in cohesive soils	67
1.3 Site investigation: field work	4	3.3 Consolidation settlement	68
1.3.1 Trial pit logs	4	3.3.1 Bearing capacity of cohesive soils	68
1.3.2 Borehole record	4	3.3.2 Vertical stress distribution	70
1.4 Site investigation procedure	4	3.3.3 Construction problems on clay sites	70
1.4.1 Borehole logs	4	3.3.4 Foundation designs on clay soils	71
1.4.2 Trial pit logs	4	3.3.5 Settlements in clay soils	72
1.4.3 Groundwater	4	3.4 Moisture movements	74
1.4.4 Standard penetration tests	4	3.4.1 Liquid limit test	76
1.5 Interpretation of laboratory testing	9	3.4.2 Plastic limit test	77
1.5.1 Chemical tests	9	Bibliography	79
1.6 Solution features	11		
1.6.1 Limestones	11	4 Foundations in sands and gravels	81
1.6.2 Chalk	11	4.1 Classification of sands and gravels	81
1.6.3 Salt	13	4.1.1 Composite sands and gravels	81
1.6.4 Gypsum	14	4.1.2 Dilatant sands	82
Case study 1.1 Investigation of former mining site, Sheffield	14	4.1.3 Calcareous sands	82
Bibliography	21	4.2 Relative densities of granular soils	82
		4.2.1 Field density assessment	82
2 Foundation design	23	4.2.2 Visual observations	82
2.1 Introduction	23	4.2.3 Groundwater levels	83
2.1.1 Width of footing	23	4.2.4 The standard penetration test	83
2.1.2 Soft spots	23	4.2.5 Interpretation of SPT results	84
2.1.3 Stratum variation in excavation	23	4.2.6 Ultimate bearing capacities	84
2.1.4 Firm clays overlying soft strata	25	4.3 Construction problems in granular soils	86
2.1.5 Depth of footings	26	4.4 Foundation design in granular soils	87
2.2 Widened reinforced strip footings	29	4.5 Plate bearing tests	89
2.3 Reinforced strip footings on replacement granular fill	32	4.6 Piling into sands and gravel strata	89
2.4 Trench fill foundations	33	4.6.1 Bored piles	90
2.5 Raft foundations	34	4.6.2 Continuous flight auger piles	90
2.6 Pad and pier foundation	44	4.6.3 Design of bored piles	90
2.6.1 Disused wells	44	4.6.4 Set calculations	92
2.7 Piled foundations	47	4.6.5 Dynamic pile formula	92
2.7.1 Bored piles	47	4.6.6 Re-drive tests	93
2.7.2 Design of a bored pile	48	4.6.7 Base-driven steel tube piles	93
2.7.3 Design of bored and driven piles	48	4.6.8 Top-driven steel piles	93
		Bibliography	94

5 Building in mining localities	95	7.3.2 Cantilever walls: reinforced concrete or brickwork	142
5.1 Coal mining, past and present	95	7.3.3 Gabions, crib walling, reinforced earth	143
5.2 Coal shafts	96	7.3.4 Steel sheet piling	144
5.3 Shallow mineworkings	97	7.4 Designing retaining walls	144
5.4 Drilling investigations	99	7.4.1 Active pressure on walls	144
5.5 Stabilizing old workings	99	7.4.2 Surcharge loading	145
5.5.1 Collapsed workings	99	7.4.3 Passive resistance (granular soils)	146
5.5.2 Special conditions	100	7.5 Cantilevered retaining walls	146
5.6 Foundations in areas with shallow workings	100	7.5.1 Mass brick or block walls	146
5.7 Active mining	100	7.5.2 Reinforced cavity walls	150
5.8 Future mining	100	7.5.3 Pocket-type walls	150
5.9 Mitigating the effects of mining subsidence	101	7.6 Damp-proofing to retaining walls	160
5.9.1 Longwall mining (advancing system)	101	7.6.1 Type A structures: tanked protection	160
5.9.2 Designing buildings for future mining subsidence	101	7.6.2 Type C structures: drained cavity construction	163
5.9.3 CLASP system of construction	102	Bibliography	164
5.9.4 Mining rafts	103		
5.9.5 Irregular-shaped units	104	8 Building on filled ground	165
5.9.6 Designing strip footings in active mining areas	107	8.1 Opencast coal workings	167
5.9.7 Movement joints	109	8.2 Foundations	168
Bibliography	112	8.2.1 Stiff raft foundations	168
		8.2.2 Piled foundations	168
6 Sites with trees	113	8.3 Suspended ground-floor construction	169
6.1 Foundation design	113	8.4 Compaction of fills to an engineered specification	171
6.2 Building on wooded sites	118	8.4.1 Procedure	171
6.2.1 Piled foundations	118	8.4.2 Site testing before backfilling	171
6.2.2 Trench-fill concrete foundations	118	8.4.3 Foundations	172
6.2.3 Deep strip footings with loose backfill	119	8.4.4 Roads and drainage	172
6.2.4 Raft foundations on a thick cushion of granular fill	119	8.4.5 Groundwater	172
6.3 Precautions to take when there is evidence of clay desiccation	121	8.5 Ground improvement techniques	172
6.3.1 Suspended floors	121	8.5.1 Dynamic consolidation	172
6.3.2 Drainable and services	121	8.5.2 Surcharge loading	172
6.3.3 Protection to drainage	121	8.6 Compaction of structural fills	172
6.4 Foundations in granular strata overlying shrinkable clays	130	8.6.1 Materials specification	173
Bibliography	130	8.6.2 Definitions	173
		8.6.3 Suitable fill materials	173
7 Developing on sloping sites	131	8.6.4 Unsuitable materials	173
7.1 Stability of slopes	131	8.6.5 Compaction	173
Case Study 7.1 Sloping site with clay fills over boulder clay	135	8.6.6 Testing on site	174
7.2 Developing on sloping sites	140	Bibliography	174
7.2.1 Additional weight of dwellings	140		
7.2.2 Additional weight of regrade fill	141	9 Ground improvement	175
7.2.3 Changes in the groundwater level or surface runoff	141	9.1 Vibro-compaction techniques	176
7.2.4 Excavations for deep drainage	141	9.1.1 Types of treatment	176
7.2.5 Removal of trees and vegetation	141	9.1.2 Ground conditions	177
7.2.6 Split-level housing	142	9.1.3 Engineering supervision	180
7.3 Retaining systems	142	9.1.4 Design of vibro-compaction stone columns	183
7.3.1 Gravity type retaining systems	142	9.1.5 Foundations on vibro-compaction sites	187
		9.2 Dynamic consolidation	188
		9.2.1 Testing	191
		9.3 Preloading using surcharge materials	191
		9.4 Improving soils by chemical or grout injection	192
		Bibliography	193

10 Building up to existing buildings	195	11.1.6 Gasworks	224
10.1 Site investigation	195	11.1.7 Scrapyards	224
10.2 Foundation types	195	11.1.8 Metal smelting works	224
10.3 Underpinning	202	11.1.9 Timber yards	224
10.3.1 Beam and pad solution	206	11.1.10 Railway marshalling yards	224
10.3.2 Pile and needle beam solution	206	11.1.11 Sewage works, farms	224
Case study 10.1 Investigation and underpinning of detached house on made ground, York	208	11.1.12 Old mineworkings	225
Case study 10.2 Differential settlement, Leyburn	209	11.1.13 Phytotoxic guidelines	226
Case study 10.3 House on made ground, Beverley	212	11.2 Desk study	226
Case study 10.4 House founded on sloping rock formation, Scarborough	213	11.2.1 Local geological study	226
10.4 Shoring	216	11.2.2 Industrial history of the site	226
Bibliography	217	11.2.3 Mining investigation	226
		11.2.4 Site reconnaissance	226
11 Contaminated land	219	11.3 Site investigation	226
11.1 Contaminated sites	219	11.3.1 Trial pits	226
11.1.1 Landfill sites	220	11.3.2 Boreholes	226
11.1.2 Gas migration	221	11.3.3 Testing for toxic gases	226
11.1.3 Gas monitoring	221	11.3.4 Chemical analysis	227
11.1.4 Carbon dioxide	222	11.3.5 Safety	228
11.1.5 External measures	223	11.3.6 Conclusion	228
		Case study 11.1	228
		Bibliography	231
		Index	233
