

PROCEEDINGS OF THE INTERNATIONAL WORKSHOP ON ADVANCES IN
UNDERSTANDING AND MODELLING THE MECHANICAL BEHAVIOUR OF PEAT
DELFT / NETHERLANDS / 16-18 JUNE 1993

Advances in Understanding and Modelling the Mechanical Behaviour of Peat

Edited by

EVERT DEN HAAN

Delft Geotechnics, Netherlands

RUUD TERMAAT

Rijkswaterstaat, Netherlands

TUNCER B. EDIL

University of Wisconsin, Madison, Wis., USA

A. A. BALKEMA / ROTTERDAM / BROOKFIELD / 1994

Table of contents

Preface	IX
Organisation	XI
1 One-dimensional behaviour	
Stress-induced one-dimensional creep of peat <i>T.B.Edil, P.J.Fox & L.-T.Lan</i>	3
Changes in the mechanical properties of soils with variations in organic content <i>E.R.Farrell, C.O'Neill & A.Morris</i>	19
Temperature-induced one-dimensional creep of peat <i>P.J.Fox & T.B.Edil</i>	27
A simple formula for final settlement of surface loads on peat <i>E.J.den Haan & L.S.F.El Amir</i>	35
Secondary and tertiary compression of peat <i>E.J.den Haan & T.B.Edil</i>	49
One-dimensional consolidation with special reference to peat <i>E.T.Hanrahan</i>	61
Some results concerning the development of K_0 during one-dimensional creep of peat <i>S.Krieg & M.Goldscheider</i>	71
Empirical model of peat consolidation <i>Z.Meyer</i>	77
Residual peat settlement under decreasing load <i>Z.Meyer & R.Krok</i>	83
Non-linear model of terminal settlement of peat <i>Z.Meyer & M.Dereczenik</i>	89

General Report Session 1: One-dimensional behaviour <i>E.J.den Haan</i>	95
Summary of Session 1: One-dimensional behaviour <i>E.J.den Haan</i>	131
 2 Stress-strain and strength behaviour	
Constitutive aspects of an embankment widening project <i>R.B.J.Brinkgreve, P.A.Vermeer & E.Vos</i>	143
Micromechanics model for peat compression <i>P.J.Fox & T.B.Edil</i>	159
An evaluation of the increase in shear strength of organic soils <i>Z.Lechowicz</i>	167
Investigation of requirements for plane strain element tests on peat <i>F.Molenkamp</i>	181
Application of Kondner's nonlinear model in describing stress-strain relation in peat, considering consolidation <i>J.Przystański</i>	203
Anisotropic peat model <i>J.B.Sellmeijer</i>	211
The use of constitutive soil models in consolidation analysis of organic subsoil under embankment <i>A.Szymański</i>	231
Biaxial tests with natural and artificial peat <i>R.Termaat & M.Topolnicki</i>	241
Numerical simulation of stress-strain behaviour of peat for biaxial deformations at plane strain <i>M.Topolnicki & A.Niemunis</i>	253
Comparison of numerical analysis with field data of a road widening project on peaty soil <i>E.Vos, J.F.Couvreur & M.Vermaut</i>	267
Changes in pore size distributions due to consolidation stress histories and dilatancy of peat <i>H.Yamaguchi</i>	275
Evaluation of experimental data of undisturbed peat in triaxial test <i>H.Yamaguchi</i>	289

Large strain cyclic behaviour of peat <i>K.Yasuhara, H.Oikawa & S.Noto</i>	301
General Report Session 2: Stress-strain and strength behaviour <i>R.J.Termaat</i>	311
Summary of Session 2: Stress-strain and strength behaviour <i>M.Topolnicki & B.A.N.Koehorst</i>	327
 3 Immediate issues in engineering practice	
Experience of peat preloading in the Varna West Harbour <i>B.Kirov</i>	341
The influence of strip drains on the consolidation performance of organic soils <i>E.Koda & W.Wolski</i>	347
Settlement performance of the central Hokkaido expressway built on peat <i>N.Kurihara, T.Isoda, H.Ohta & H.Sekiguchi</i>	361
Construction on peat: State of the art in France <i>J.P.Magnan</i>	369
Friction piles for a walkway on a peat bog <i>T.L.L.Orr & T.McEnaney</i>	381
Some aspects of the engineering practice regarding peat in small polder dikes <i>B.F.Vonk</i>	389
General Report Session 3: Immediate issues in engineering practice <i>T.B.Edil</i>	403
Summary of Session 3: Immediate issues in engineering practice <i>A.A.M.Venmans</i>	415
List of participants	425
Author index	428
