

GEOTECHNICAL ENGINEERING OF EMBANKMENT DAMS

ROBIN FELL

Professor of Civil Engineering

School of Civil Engineering, University of New South Wales, Sydney

PATRICK MacGREGOR

Chief Engineering Geologist

Snowy Mountains Engineering Corporation, Sydney

DAVID STAPLEDON

Geotechnical Consultant & Professor of Applied Geology

University of South Australia, Adelaide

A.A. BALKEMA / ROTTERDAM / BROOKFIELD / 1992

Contents

PREFACE	IX
1 EMBANKMENT DAMS, THEIR ZONING AND SELECTION	1
1.1 Types of embankment dams, their advantages and limitations	1
1.2 Zoning of embankment dams and typical construction materials	7
1.3 Selection of embankment type	17
2 WEATHERING PROCESSES AND PROFILES IN VALLEYS	23
2.1 High horizontal stresses in rock	23
2.2 Weathering of rocks	33
2.3 Chemical alteration	48
2.4 Rapid weathering	49
2.5 Classification of weathered rock	51
2.6 Landsliding	55
3 GEOTECHNICAL QUESTIONS ASSOCIATED WITH VARIOUS GEOLOGICAL ENVIRONMENTS	73
3.1 Granitic rocks	73
3.2 Volcanic rocks (intrusive and flow)	75
3.3 Pyroclastics	84
3.4 Schistose rocks	88
3.5 Mudrocks	96
3.6 Sandstones and related sedimentary rocks	103
3.7 Carbonate rocks	107
3.8 Alluvial soils	126
3.9 Colluvial soils	130
3.10 Laterites and lateritic weathering profiles	134
3.11 Glacial deposits and landforms	137
4 PLANNING, CONDUCTING AND REPORTING OF GEOTECHNICAL INVESTIGATIONS	154
4.1 The need to ask the right questions	154
4.2 Geotechnical input at various stages of project development	157

VI *Geotechnical engineering of embankment dams*

4.3	An iterative approach to the investigations	157
4.4	Progression from regional to local studies	160
4.5	Reporting	161
4.6	Timing and funding of geotechnical studies	161
4.7	The site investigation team	162
5	SITE INVESTIGATION TECHNIQUES	164
5.1	Topographic mapping and survey	164
5.2	Interpretation of satellite images and aerial photographs	165
5.3	Geotechnical mapping	170
5.4	Geophysical methods	174
5.5	Test pits and trenches	180
5.6	Adits and shafts	183
5.7	Drill holes	183
5.8	Sampling	194
5.9	<i>In situ</i> testing	196
5.10	Groundwater	200
5.11	<i>In situ</i> permeability tests on soil	201
5.12	<i>In situ</i> permeability tests in rock	202
5.13	Common errors and deficiencies in geotechnical investigation	210
6	LABORATORY TESTING TECHNIQUES AND THEIR LIMITATIONS	215
6.1	Shear strength of soils	215
6.2	Shear strength of rock	237
6.3	Permeability of soils	245
7	DESIGN, SPECIFICATION AND CONSTRUCTION OF FILTERS	253
7.1	Basic requirements for filters	253
7.2	Filter design methods	255
7.3	Specification of size and durability of filters	267
7.4	Dimensions, placement and compaction of filters	273
7.5	Use of geotextiles as filters in dams	277
8	CLAY MINERALOGY, SOIL PROPERTIES, DISPERSIVE SOILS AND PIPING FAILURE	288
8.1	Introduction	288
8.2	Clay minerals and their structure	288
8.3	Interaction between water and clay minerals	293
8.4	Identification of clay minerals	300
8.5	Engineering properties of clay soils related to the types of clay minerals present	303
8.6	Identification of dispersive soils	306
8.7	Use of dispersive soils in embankment dams	315
9	DAMS ON HIGHLY PERMEABLE SOIL FOUNDATIONS	318
9.1	General description of the special problems	318

9.2 Control of erosion and 'blowup' or liquefaction of the foundation	320
9.3 Control of underseepage by cutoffs	325
10 STABILITY ANALYSIS	342
10.1 General principles	342
10.2 Estimation of pore pressure	343
10.3 Analysis of stability	356
11 FOUNDATION PREPARATION AND CLEANUP	359
11.1 General requirements	359
11.2 General foundation preparation	359
11.3 Cutoff foundation	361
11.4 Width and batter slopes for cutoff	368
11.5 Selection of cutoff foundation criteria	369
11.6 Slope modification and seam treatment	370
12 FOUNDATION GROUTING	377
12.1 General concepts of grouting dam foundations	377
12.2 Grouting design – Cement grout	378
12.3 Some practical aspects of grouting with cement	401
12.4 Chemical grouts in dam engineering	413
13 EMBANKMENT DETAILS	425
13.1 Freeboard	425
13.2 Embankment crest details	431
13.3 Embankment dimensioning and tolerances	433
13.4 Slope protection	435
13.5 Conduits through embankments	444
13.6 Interface between earthfill and concrete structures	447
13.7 Flood control structures	448
13.8 Design of dams for overtopping during construction	450
14 SPECIFICATION AND QUALITY CONTROL OF EARTHFILL AND ROCKFILL	457
14.1 Specification of rockfill	457
14.2 Specification of earthfill	461
14.3 Quality control	467
14.4 Testing of rockfill	472
14.5 Testing of earthfill	475
15 DESIGN OF DAMS TO WITHSTAND EARTHQUAKES	478
15.1 Effect of earthquake on embankment dams	478
15.2 Assessment of design earthquake	479
15.3 Liquefaction of dam embankments and foundations	488
15.4 Evaluation of liquefaction potential	496
15.5 Analysis of stability and deformations	503
15.6 Design for earthquake	513

VIII *Geotechnical engineering of embankment dams*

16	CONCRETE FACE ROCKFILL DAMS	519
16.1	General arrangement and reasons for selecting this type of dam	519
16.2	Rockfill zones and their properties	523
16.3	Concrete face	534
16.4	Construction aspects	547
16.5	Some non-standard design features	550
17	MINE AND INDUSTRIAL TAILINGS DAMS	555
17.1	General	555
17.2	Tailings and their properties	555
17.3	Methods of tailings discharge and water recovery	565
17.4	Prediction of tailings properties	570
17.5	Methods of construction of tailings 'dams'	580
17.6	Seepage from tailings dams and its control	595
18	MONITORING AND SURVEILLANCE OF EMBANKMENT DAMS	607
18.1	What is monitoring and surveillance?	607
18.2	Why undertake monitoring and surveillance?	608
18.3	What monitoring is required?	613
18.4	How is the monitoring done?	620
18.5	How often should monitoring be carried out?	643
