

# Powders & Grains 93

Edited by

**C. THORNTON**

*Aston University, United Kingdom*

1. Introduction

1.1. The second approach to granular media

M. J. Collins

1.2. The mechanical properties of 3D packings of particles

C. G. Callias, J. G. Gasiot, J. P. Rivet & J. Gasiot

1.3. An experimental study of granular packing structure changes

J. L. Johnson & C. D. Oso

2. Particle interactions

2.1. The contact of two particles from a powder bed

K. Johnson

2.2. A plastic contact of two particles with a surface

J. L. Johnson, K. Johnson & J. G. Gasiot

2.3. The contact of two particles from a powder bed: a review of the contact physics of granular media

J. L. Johnson & C. D. Oso

2.4. The contact of two particles from a powder bed: a review of the contact physics of granular media

J. L. Johnson & C. D. Oso

2.5. The contact of two particles from a powder bed: a review of the contact physics of granular media

J. L. Johnson & C. D. Oso

2.6. The contact of two particles from a powder bed: a review of the contact physics of granular media

J. L. Johnson & C. D. Oso

2.7. The contact of two particles from a powder bed: a review of the contact physics of granular media

J. L. Johnson & C. D. Oso

2.8. The contact of two particles from a powder bed: a review of the contact physics of granular media

J. L. Johnson & C. D. Oso

## Table of contents

Preface	XI
Opening address by Professor Sir Sam Edwards FRS	XIII
<b>1 Packing geometry</b>	
Discrete-mechanical approach to granular media <i>M.Satake</i>	3
Geometrical properties of 2d packings of particles <i>C.Annic, D.Bideau, J.Lemaître, J.P.Trodec &amp; A.Gervois</i>	11
An experimental study of granular packing structure changes under load <i>X.Lee &amp; W.C.Dass</i>	17
<b>2 Particle interactions</b>	
Significance of interparticle forces to powder behaviour <i>K.Kendall</i>	25
Elastic-plastic impact of fine particles with a surface <i>Z.Ning &amp; C.Thornton</i>	33
Rotational stiffness of cylindrical particle contacts <i>J.P.Bardet &amp; Q.Huang</i>	39
Mathematical modelling of normal collision of smooth elastic spheres in liquid <i>J.C.Wells</i>	45
Constitutive model for unsaturated granular media <i>J.Biares, J.M.Fleureau &amp; S.Taibi</i>	51
Effect of liquid bridge forces on agglomerate collisions <i>G.Lian, C.Thornton &amp; M.J.Adams</i>	59
Thermal conductivity of granular media <i>C.Argento &amp; D.Bouvard</i>	65

### 3 Quasi-static deformation

From global to local variables in granular materials <i>B.Cambou</i>	73
Co-operative motion of grains in a discrete model <i>D.Harris &amp; P.Solberg</i>	87
Inter-granular friction and the mechanical and acoustical properties of granular media <i>R.E.Slade &amp; K.Walton</i>	93
Entropy methods in the constitutive modeling of granular material <i>C.B.Brown</i>	99
Dislocation and plasticity of granular materials with frictional contacts <i>C.S.Chang</i>	105
Analytical estimates for constitutive relations of assemblies of particles in elasto-frictional contact <i>M.A.Koenders</i>	111
On the definition of stress and strain in granular assemblies through the relation between micro- and macro-level characteristics <i>K.Bagi</i>	117
A micromechanics model for consolidated granular solids <i>A.Misra</i>	123
Axisymmetric compression of 3D polydisperse systems of spheres <i>C.Thornton &amp; G.Sun</i>	129
Studies of the behavior of granular material and its fabric evolution <i>Y.-C.Chen &amp; G.-C.Hwang</i>	135
Three dimensional analysis for effect of particle arrangement on cyclic deformation of a granular material <i>M.Kawamura, H.Hajouta &amp; Y.Ohashi</i>	141
Micromechanical response of simulated granular materials under principal stress rotations <i>L.Rothenburg, R.J.Bathurst &amp; A.A.Berlin</i>	147
A microscopic study on shear mechanism of granular materials by DEM and experiments <i>H.Matsuoka &amp; S.Yamamoto</i>	155
Micro-fabric and couple stress in shear bands of granular materials <i>M.Oda</i>	161
Distribution of the contact forces inside a granular material <i>M.Gherbi, R.Gourvès &amp; F.Oudjehane</i>	167
Evidence of local 'seisms' of microscopic and macroscopic stress fluctuations during the deformation of a packing of grains <i>W.Meftah, P.Evesque, J.Biarez, D.Sornette &amp; N.E.Abriak</i>	173
Dissipative behaviour of granular soils <i>M.P.Luong</i>	179

<i>4 Powder compacts</i>	
Effect of interparticle potentials on particle packing for ceramic processing <i>F.F.Lange</i>	187
Effective viscosities and sintering rates of composite random packings of spheres <i>A.Jagota</i>	201
Interfacial chemistry and pressure filtration of silicon nitride suspensions <i>C.-W.Hong, M.Kulig &amp; P.Greil</i>	207
Mechanical properties of random packings of spheres <i>T.Lachhab &amp; C.Weill</i>	213
Variation of superficial energy with pressure <i>G.Thomas</i>	219
<i>5 Vibrating beds</i>	
New computation methods in granular dynamics <i>J.J.Moreau</i>	227
Dynamics and structural relaxation in powders <i>A.Mehta, G.C.Barker &amp; R.J.Needs</i>	233
Discrete element modeling of vibrating granular beds <i>A.D.Rosato &amp; Y.Lan</i>	241
Vertical oscillation of a bed of granular material <i>C.E.Brennen, S.Ghosh &amp; C.Wassgren</i>	247
Segregation phenomena in vibrated powders <i>G.C.Barker, M.J.Grimson &amp; A.Mehta</i>	253
<i>6 Rapid granular flow</i>	
Steady states in granular dynamics <i>L.V.Woodcock</i>	261
Perturbation amplification in rapid granular shear flows <i>T.M.Mello, P.H.Diamond &amp; H.Levine</i>	269
Measurements of velocity fluctuations in a granular flow <i>E.D.Taylor &amp; M.L.Hunt</i>	275
Transition from quasi-static to rate dependent shearing of concentrated suspensions <i>H.K.Kytömaa &amp; D.Prasad</i>	281
The transition from fluid-like to solid-like behavior in granular flows <i>C.S.Campbell</i>	289
Rapid granular shear flows driven by identical, bumpy, frictionless boundaries <i>J.T.Jenkins &amp; E.Askari</i>	295

Computer simulation of simple shear flow of inelastic, frictional spheres <i>C.K.K.Lun &amp; A.A.Bent</i>	301
New approach to the constitutive rheological relations for rapid granular flow <i>M.C.Turner &amp; L.V.Woodcock</i>	307
<b>7 Avalanches</b>	
Avalanches in real sandpiles: The role of disorder <i>G.C.Barker &amp; A.Mehta</i>	315
Grain shape and size influence on low stress behaviour observing discrete avalanches in a rotating cylinder <i>J.De Jaeger</i>	321
Density is a controlling parameter of sandpile avalanches <i>P.Porion &amp; P.Evesque</i>	327
Velocity measurements on a bidimensional powder <i>J.Rajchenbach, E.Clément &amp; J.Duran</i>	333
Flow of particles on an inclined plane <i>F.X.Riguidel, M.Ammi, D.Bideau, A.Hansen, &amp; J.C.Messenger</i>	337
<b>8 Hopper flow</b>	
Using a cellular automaton for the simulation of flow of granular material <i>D.Désérable &amp; J.Martinez</i>	345
Analysis of the formation of arches plugging the flow of granular materials <i>H.Sakaguchi &amp; E.Ozaki</i>	351
Continuous potential model of particle flow in hoppers <i>P.A.Langston, U.Tüzün &amp; D.M.Heyes</i>	357
Bidimensional flow behaviour of granular material <i>J.C.Roth &amp; A.Khelil</i>	363
Experimental investigation of the horizontal pressure distribution in a silo <i>C.Dahmane &amp; Y.Molodtsov</i>	369
<b>9 General flow problems</b>	
Positron-based studies of powder mixing <i>T.D.Beynon, J.Bridgwater, C.J.Broadbent, P.Fowles, M.R.Hawkesworth, P.A.McNeil &amp; D.J.Parker</i>	377
Non-invasive measurements of granular flows by magnetic resonance imaging <i>M.Nakagawa, S.A.Altobelli, A.Caprihan &amp; E.Fukushima</i>	383
Particulate transport in consolidated granular systems <i>C.Ghidaglia, E.Guazzelli, L.de Arcangelis &amp; L.Oger</i>	389

The onset of deterministic chaos in gas-solids fluidization <i>J.C.Schouten, M.L.M.van der Stappen &amp; C.M.van den Bleek</i>	395
Computer simulated impact of agglomerates <i>K.D.Kafui &amp; C.Thornton</i>	401
Development of a two-dimensional transient code for simulating particle behavior in hoppers and fluidized beds – Models and code verifications <i>Y.Yabushita, K.Shibata, K.Saido &amp; Y.Tsuji</i>	407
Efficient computer modelling of the motion of arbitrary grains <i>C.Hogue &amp; D.E.Newland</i>	413
A numerical model for the mechanical behavior of particulate media containing non-circular shaped particles <i>G.G.W.Mustoe &amp; G.L.DePoorter</i>	421
Stochastic model of transient compression in granular media <i>P.L.Bourdeau</i>	429
 <i>10 Miscellaneous (Posters)</i>	
Fluid-sediment interactions and dynamic shear stress in fine sediment suspensions <i>S.Aijaz &amp; S.A.Jenkins</i>	437
Oedometric compaction of a very deformable binary mixture of expanded graphite and salt <i>S.Mauran &amp; F.L'Haridon</i>	439
Shear test and microscopic approach of granular material by image analysis <i>F.Ganiou &amp; N.E.Abriak</i>	441
Study of the samples made of soldered glass balls by acoustic emission <i>M.C.Reymond, M.Gomina &amp; C.Gauthier</i>	443
Discrete element method (D.E.M.) analysis of the origin of processing induced flaws in advanced ceramics <i>G.L.DePoorter, G.G.W.Mustoe &amp; D.R.Greening</i>	445
Handling of bulk products: Application to flow in a hopper <i>P.Adamiec</i>	447
Influence of the nature of walls on the flow of granular material <i>N.E.Abriak &amp; R.Gourvès</i>	449
Measurement of discharge rates from a hopper through rectangular orifices <i>L.Benmansour, Y.Molodtsov, N.E.Abriak &amp; F.Parsy</i>	451
A new theoretical analysis of particle flow in a discharge cone <i>Y.Molodtsov &amp; A.Ould-Dris</i>	453
Experimental and theoretical modelisation of bidimensional flow <i>N.E.Abriak &amp; F.Parsy</i>	455
The mechanics of granular mixtures <i>T.Schanz</i>	457

Fine wet grinding of an alumina hydrate in a tumbling ball mill <i>C.Frances &amp; C.Laguerie</i>	459
The abrasion resistance of a fluidised bed catalyst support <i>P.J.Denny &amp; F.King</i>	461
Contribution to the rheometry of powders <i>F.Blaszczyk &amp; D.Sigli</i>	463
Study of the dispersion of alumina by turbidimetry <i>H.Saint-Raymond, F.Gruy, G.Crawley, M.Cournil, F.Valdivieso &amp; P.Goeriot</i>	465
Fracture mechanics of lactose compacts <i>O.Saint-Raymond, D.Bortzmeyer, D.Chulia &amp; G.Thomas</i>	467
Analytical solutions for the prediction of loads in silos during filling and emptying stages <i>E.Ragneau &amp; J.M.Aribert</i>	469
<b>Author index</b>	<b>471</b>
