Contents

Preface vii

1 Experimental Foundations **1**
1.1 Introduction 1
1.2 General Remarks 2
1.3 True Triaxial Testing Equipment and Test Procedure 14
1.4 Uniaxial and Triaxial Creep Tests 17

2 Results and Background **1**
2.1 Quasistatic Tests 23
2.2 Creep of Rocks 43
2.2.1 Long Term Creep 43
2.2.2 Relaxation Tests and Stress Drop Tests 55
2.3 Brittle-Ductile Transition and Yield Stress 58

3 Deformation Mechanisms for Creep **63**
3.1 Influence of Stress and Temperature 63
3.2 Water-Enhanced Creep 76

4 Rheological Constitutive Equations for Rocks **81**
4.1 Introduction 81
4.2 How to Choose the Most Appropriate Constitutive Equation 82
4.3 Compressibility/Dilatancy Boundary 106
4.4 Failure Surface 112
4.5 Generalization of the Model for Finite Strains 115
4.6 Conclusions and Historical Notes 115

5 General Constitutive Equation **119**
5.1 General Formulation 119
5.2 Transient Creep 120
5.2.1 The Yield Function 120
5.2.2 The Viscoplastic Potential 129
5.2.3 The Irreversible Strain Rate Orientation Tensor N 136
5.2.4 Examples 138
5.2.5 Simplified Variants of the Constitutive Equation 143
5.2.6 Creep Formula and Comparison with the Data 145
5.3 Steady-State Creep 153
5.3.1 The Steady-State Creep Potential 153
5.3.2 Example for Rock Salt 160
5.3.3 Triaxial Generalization of Uniaxial Creep Laws for Steady State 163
5.3.4 The Creep Formula 167
5.4 Rock Anisotropy 169
5.4.1 Introduction 169
5.4.2 Macroscopic Failure Criteria for Anisotropic Rocks 169
5.4.3 Induced Anisotropy 179

6 Damage and Creep Failure 185
6.1 Experimental Background 185
6.2 Acoustic Emission 189
6.3 Damage Estimation by Dynamic Procedures 192
6.4 Energetic Criteria for Damage 196
6.5 Creep Failure 204
6.6 Historical Note 207

7 Mining and Petroleum Engineering Problems 209
7.1 Stresses *in situ* 209
7.2 Initial Conditions 212
7.3 Boundary Conditions 213

8 Closure and Failure of Vertical Caverns and Boreholes 215
8.1 Formulation of the Problem 216
8.2 Convergence, Dilatancy, Damage and Stability 218
8.3 A More General Primary Stress State 223
8.4 Stress Variation During Creep 228
8.5 Stability and Failure of Wellbore or Cylindrical Caverns 232

9 Creep, Closure and Damage of Horizontal Tunnels 235
9.1 Formulation of the Problem 235
9.2 Domains of Dilatancy, Compressibility and Failure Around the Tunnel 238
9.3 Tunnel Convergence and Creep Failure 246

10 Creep, Damage and Failure Around Rectangular-Like Galleries or Caverns 251
10.1 Formulation of the Problem 252
10.2 Dilatancy, Compressibility and Failure Around a Gallery 258
10.3 Wide Rectangular-Like Gallery 260
10.4 Square-Like Galleries 282
10.5 Tall Rectangular-Like Galleries 291
10.6 Conclusions 296
