Principles of Glacier Mechanics

Roger LeB. Hooke

Adjunct Professor
Department of Geology and Institute for Quaternary Studies
University of Maine, Orono

Professor
Department of Geology and Geophysics
University of Minnesota, Minneapolis

A textbook for upper division and graduate students with an interest in the flow of glaciers and the origins of landforms produced by glaciers

Prentice Hall, Upper Saddle River, New Jersey 07458

BIBLIOTECA

Contents

Preface vii

Chapter 1: Why Study Glaciers? 1

Chapter 2: Some Basic Concepts 4

A Note on Units 4
Glacier Size, Shape, and Temperature 4
The Condition of Incompressibility 6
Stresses and Strain Rates 8

Chapter 3: Mass Balance 13

The Transformation of Snow to Ice 13
Snow Stratigraphy 15
Mass-Balance Principles 18
Causes of Mass-Balance Fluctuations 19
The Budget Gradient 22
Effect of Weather Patterns on Mass-Balance Fluctuations 24
Summary 26

Chapter 4: Flow of a Crystalline Material 27

Crystal Structure of Ice 27
Dislocations 28
Rate-Limiting Processes 32
Internal Stresses 35
Recrystallization 36
Deformation Mechanism Maps 38
A Flow Law for Glacier Ice 41
Summary 44

Chapter 5: The Velocity Field in a Glacier 46

Balance Velocity 47
Shear-Stress Distribution 47
Horizontal Velocity at Depth in an Ice Sheet 48
Horizontal Velocity in a Valley Glacier 50
Mean Velocity and Ice Flux 53
Vertical Velocity 54
Submergence and Emergence Velocities 55
Flow Field 56
Transverse Profiles of Surface Elevation on a Valley Glacier 56
Effect of Drifting Snow on the Velocity Field 58
Inhomogeneities in the Flow Field in Large Ice Sheets: Ice Streams 61
Summary 64

Chapter 6: Temperature Distribution in Polar Ice Sheets 65

Energy Balance in an Ice Sheet 65
Dependence of κ on Temperature 69
The Steady-State Temperature Profile at the Center of an Ice Sheet 70
Temperature Profiles in the Ablation Zone 77
Temperature Profiles Near the Surface of an Ice Sheet 77
Temperature Distributions Far from a Divide 79
Basal Temperatures in Antarctica: Comparison of Solutions Using the Column and Flowline Models 82
Englacial and Basal Temperatures Along a Flowline Using the Column Model 88
Geomorphic Implications 90
Summary 90

Chapter 7: The Coupling Between a Glacier and Its Bed 92

Sliding 92
Deformation of Subglacial Till 106
Ploughing and Decoupling 116
Summary 117

Chapter 8: Water Flow in and under Glaciers: Geomorphic Implications 119

The Upper Part of the Englacial Hydraulic System 119
Equipotential Surfaces in a Glacier 122
Melt Rates in Conduits 125
Water Pressures in Englacial and Subglacial Conduits 127
Shapes of Subglacial Conduits 132
The Linked-Cavity Drainage System 134
Transitions Between Conduit and Linked-Cavity Systems 136
Multibranched Aborescent System of Individually Braided Conduits 138
Surges 139
Subglacial Conduits on Deforming Till 140
Subglacial Drainage Paths and the Formation of Eskers 142
Water Pressure Fluctuations and Glacier Quarrying 148

Origin of Cirques and Overdeepenings 149
Summary 150

Chapter 9: Stress and Deformation 152

Stress 152
Stress Equilibrium 159
Deformation 159
Condition that Principal Axes of Stress and Strain Rate Coincide 164
Summary 165

Chapter 10: Stress and Velocity Distribution in an Idealized Glacier 167

Solutions for Stresses and Velocities in Plane Strain 167
Comparison with Real Glaciers 179
Summary 180

Chapter 11: Applications of Stress and Deformation Principles to Classical Problems 181

Collapse of a Cylindrical Hole 181
Calculating Basal Shear Stresses Using a Force Balance 191
Creep of Floating Ice Shelves 196
Analysis of Borehole-Deformation Data 200
Summary 208

Chapter 12: Response of Glaciers to Changes in Mass Balance 209

Positive Feedback Processes 209
Response of a Temperate Glacier 210
Elementary Kinematic Wave Theory 211
Analysis of the Effect of a Small Change in Mass Balance Using a Perturbation Approach 214
Effect of Diffusion 217
The Problem at the Terminus 217
Further Study of the Response Time 218
Numerical Modeling of Glacier Responses 221
Comparison with Observation 221
Summary 227

Appendix: Problems 229
