

PHYSICAL AND GEOTECHNICAL PROPERTIES OF SOILS

Second Edition

Preface

Joseph E. Bowles

*Consulting Engineer/Software Consultant
Engineering Computer Software*

1	INTRODUCTION
1-1	Preface
1-2	What is Soil?
1-3	Soil Properties
1-4	Soil Behavior
1-5	Soil Classification
1-6	Soil Failure
1-7	Sources of Information for Geotechnical Engineers
1-8	Elements of Statistics and Probability
1-9	SI Units
2	SOIL PROPERTIES—PHYSICAL PROPERTIES
2-1	Introduction
2-2	Soil Composition and Terms
2-3	Basic Definitions and Mass-Volume Relationships
2-4	Numerical and Graphical Data
2-5	Aterberg for Cohesionless Soils
2-6	Soil Moisture
2-7	Indices of Soil Consistency
2-8	Specific Surface
2-9	Specific Gravity
2-10	Soil Texture
2-11	Soil Phases
2-12	Grain Size
2-13	Dry Weight of Soils

INTERNATIONAL STUDENT EDITION

CONTENTS

1-1	General Introduction	1
1-2	The Study of Soil Mechanics	2
1-3	Text Objectives	4
1-4	Some Typical Soil Problems	4
1-5	Historical Development of Soil Mechanics	5
1-6	Soil Failures	9
1-7	Sources of Information for Geotechnical Engineers	13
1-8	Elements of Statistics and Probability	16
1-9	SI Units	23
Chapter 2	Soil Properties—Physical and Index	26
2-1	Introduction	26
2-2	Soil Composition and Terms	26
2-3	Basic Definitions and Mass-Volume Relationships	27
2-4	Noncohesive and Cohesive Soils	39
2-5	Atterberg (or Consistency) Limits	40
2-6	Soil Moisture	41
2-7	Indices of Soil Consistency	42
2-8	Specific Surface	43
2-9	Specific Gravity	44
2-10	Soil Texture	46
2-11	Soil Phases	46
2-12	Grain Size	48
2-13	Unit Weight of Soils (Dry, Wet, and Submerged)	50
2-14	Effective or Intergranular Pressures	52
2-15	Intergranular Pressures in Partially Saturated Soils	59
2-16	Summary	60

Chapter 3	Geologic Properties, Formations of Natural Soil Deposits, and Groundwater	64	6-4	Determining Subsurface Conditions	174
3-1	Introduction	64	6-5	Location, Spacing, and Depth of Borings	177
3-2	The Earth	65	6-6	Sampling	179
3-3	Physical Properties of Minerals	66	6-7	Water Table	184
3-4	The Rock and Soil Cycle	67	6-8	Sample Quality and Engineering Practice	184
3-5	Igneous Rocks	70	6-9	The Standard Penetration Test (SPT)	185
3-6	Sedimentary Rocks	74	6-10	SPT Correlations	186
3-7	Metamorphic Rocks	79	6-11	Boring Logs	188
3-8	Crustal Movements	80	6-12	Cone Penetration Test (CPT)	189
3-9	Rock Weathering and Soil Formation	85	6-13	Rock Drilling	192
3-10	General Considerations in Rock Weathering	92	6-14	Seismic Exploration	194
3-11	Soil Formations Produced by Weathering	92	6-15	Resistivity Exploration	199
3-12	Running Water and Alluvial Deposits	96	6-16	The Total Stress Cell and Dilatometer	200
3-13	Glacial Deposits	100	6-17	Summary	202
3-14	Wind Deposits	106			
3-15	Gravity Deposits	109			
3-16	Subsurface Water	109			
3-17	Sources of Geologic Information	116			
3-18	Summary	117			
Chapter 4	Soil Classification Tests and Common Systems	119	Chapter 7	Compaction and Soil Stabilization	204
4-1	General	119	7-1	General Concept of Soil Stabilization	204
4-2	Soil Tests for Classification	121	7-2	Soil as a Construction Material	205
4-3	The Unified Soil Classification System	128	7-3	Soil Stabilization	205
4-4	The AASHTO Soil Classification System	135	7-4	Soil Compaction	207
4-5	General Description of AASHTO Soil Classification Subgroups	137	7-5	Theory of Compaction	208
4-6	The AASHTO Group Index	138	7-6	Compaction of Cohesionless Soils	212
4-7	Field Identification Tests	140	7-7	Structure and Properties of Compacted Cohesive Soils	213
4-8	Summary	141	7-8	Stabilization of Expansive Clays	215
Chapter 5	Soil Structure and Clay Minerals	145	7-9	Other Comments on Soil Compaction	216
5-1	Soils and Soil Formation	145	7-10	Excavation and Compaction Equipment	217
5-2	Soil Structure and Fabric	146	7-11	Compaction Specifications	223
5-3	Soil Cohesion and Friction	146	7-12	Field Control of Compaction	225
5-4	Granular Soil Structure	147	7-13	Statistical Field Unit Weight Control	230
5-5	Other Considerations of Granular Soil Structure; Relative Density	149	7-14	Deep Compaction of In Situ Soils	232
5-6	Structure of Cohesive Soils	154	7-15	Static Stabilization	234
5-7	Clay and Clay Minerals	158	7-16	Fabric Stabilization	234
5-8	General Clay Mineral Properties	163	7-17	Soil-Cement and Lime-Fly-Ash Soil Stabilization	236
5-9	Summary	167	7-18	Special Problems in Soil Compaction	238
Chapter 6	Soil Exploration and Sampling	170	7-19	Summary	239
6-1	Introduction	170	Chapter 8	Soil Hydraulics, Permeability, Capillarity, and Shrinkage	241
6-2	Site Investigation	171	8-1	Water in Soil	241
6-3	Site Geology	172	8-2	Permeability	242
			8-3	Soil Water Flow and the Bernoulli Energy Equation	245
			8-4	Determination of the Coefficient of Permeability	249
			8-5	Limitations and Other Considerations in Determining k	252
			8-6	Effective Coefficient of Permeability of Stratified Soils	254
			8-7	Capillarity and Capillary Effects in Soil	257
			8-8	Seepage Forces and Quick Conditions	267
			8-9	Summary	274

Chapter 9	Seepage and Flow Net Theory	277	11-5	Preconsolidation and Estimation of the Preconsolidation Pressure	365
9-1	Introduction	277	11-6	The Compression Parameters	367
9-2	Seepage Flow through Soil—The LaPlace Equation	278	11-7	Compression Parameters for Arithmetic Plots	369
9-3	Flow Nets	280	11-8	Empirical Approximations for C_c and C'_c	370
9-4	Flow Nets for Sheet-Pile Cut-Off Walls	282	11-9	Soil Structure and Consolidation	372
9-5	Flow Nets for Earth Dams	286	11-10	Settlement Computations	373
9-6	Methods for Obtaining the Phreatic Line for Earth Dams	289	11-11	Secondary Compression (Creep) Settlements	374
9-7	Flow Net Construction	293	11-12	Illustrative Examples	376
9-8	Direct Computation of Seepage Quantity	296	11-13	Controlling Consolidation Settlements	382
9-9	The Flow Net When $k_x \neq k_y$	297	11-14	Reliability of Consolidation Settlement Computations	382
9-10	Control of Seepage through Dams	299	11-15	Summary	383
9-11	Sudden Drawdown and Seepage Forces	301	Chapter 12	Rate of Consolidation	387
9-12	Piping and Control of Piping	302	12-1	The Coefficient of Consolidation	387
9-13	Other Methods for Seepage Quantities	304	12-2	Percent Consolidation	391
9-14	Elements of Well Hydraulics	305	12-3	Methods of Obtaining the Time of Interest for Computing c_v	393
9-15	Summary	307	12-4	Rate of Consolidation Based on Strain	396
Chapter 10	Stresses, Strains, and Rheological Concepts	310	12-5	Illustrative Examples	402
10-1	General Considerations	310	12-6	Consolidation Rates for Layered Media	410
10-2	General Stresses and Strains at a Point	312	12-7	Three-Dimensional Consolidation	411
10-3	Theory of Elasticity Concepts Used in Soil Mechanics Problems	313	12-8	Summary	411
10-4	Octahedral Stresses	314	Chapter 13	Shear Strength of Soils	414
10-5	Stress-Strain Modulus and Hooke's Law	320	13-1	Introduction	414
10-6	Anisotropic Soil	325	13-2	Shear Strength Parameters c and ϕ	416
10-7	Two-Dimensional Stresses at a Point	326	13-3	Soil Failure, Critical Void Ratio, and Residual Strength	418
10-8	Mohr's Stress Circle	328	13-4	Soil Tests to Determine Shear Strength Parameters	420
10-9	Mohr's Circle for Inclined Principal Axes	332	13-5	Stress Paths	435
10-10	Boussinesq Stresses in an Elastic Half Space	333	13-6	Shear Strength of Cohesionless Soil	440
10-11	Boussinesq Solution for Round Plates	335	13-7	Shear Strength of Cohesive Soils	442
10-12	Numerical Integration of the Boussinesq Equations	336	13-8	Pore Pressure Effects in Consolidated-Drained Tests	455
10-13	Other Solutions for the Boussinesq Equations	337	13-9	Sensitivity of Cohesive Soils	455
10-14	Pressure Bulbs and Stress Concentration Factors	341	13-10	Empirical Methods for Shear Strength	456
10-15	The Vertical Pressure Profile	342	13-11	In-Situ Direct Measurement of Shear Strength	459
10-16	The Average Pressure	344	13-12	Factors Affecting Shear Strength	462
10-17	The Newmark Influence Chart	345	13-13	Normalized Soil Parameters	463
10-18	Westergaard's Stress	348	13-14	The s_u/p_o Ratio	464
10-19	Soil Deformation or Settlement	349	13-15	Pore Pressure Parameters	466
10-20	Rheological Models	351	13-16	Summary	471
10-21	Summary	353	Chapter 14	Static and Dynamic Stress-Strain Characteristics	476
Chapter 11	Consolidation and Consolidation Settlements	356	14-1	Stress-Strain Data	476
11-1	Soil Consolidation and Settlement Problems	356	14-2	The Stress-Strain Modulus	476
11-2	Soil Consolidation	358	14-3	Poisson's Ratio	479
11-3	Interpreting the Consolidation Test	360			
11-4	Correction of the Compression Curve for Disturbance	365			

14-4	Factors Affecting the Stress-Strain Modulus and Approximations	482
14-5	Resilient Modulus	482
14-6	Dynamic Soil Stress-Strain Modulus	483
14-7	Cyclic Modulus of Deformation and Liquefaction	486
14-8	Summary	496
Chapter 15 Lateral Pressures, Bearing Capacity, and Settlement		
15-1	Introduction	498
15-2	Soil Stresses at a Point- K_0 Conditions	498
15-3	Active and Passive Earth Pressures	501
15-4	Pressures against Walls	506
15-5	Inclined Cohesionless Ground	507
15-6	Lateral Earth Pressure for Cohesive Soils	510
15-7	The Trial Wedge Solution	513
15-8	Logarithmic Spiral and ϕ -Circle Methods for Passive Pressure in Cohesionless Soil	514
15-9	Bearing Capacity—Theoretical	517
15-10	Bearing Capacity by Empirical Methods	522
15-11	Other Bearing Capacity Problems	524
15-12	Deep Foundations	525
15-13	Immediate Settlement Computations	529
15-14	Summary	533
Chapter 16 Stability of Slopes		
16-1	General Considerations in Stability of Slopes	536
16-2	Infinite Slopes	536
16-3	Stability of Infinite Cohesive Slopes	537
16-4	Circular Arc Analysis	539
16-5	The ϕ -Circle Method	540
16-6	Slope Stability Charts	542
16-7	Slope Analysis by Method of Slices	544
16-8	Wedge Block Analysis	551
16-9	Validity of Slope Stability Analyses	555
16-10	Summary	558
Bibliography		
Indexes		
13-1	Name Index	563
13-2	Subject Index	571

BIBLIOGRAPHY

- 16-1 A soil has a cohesion of 10 kips/ft and a friction angle of 30°. If the slope of a cut is 10°, what is the factor of safety? (Ans. 1.28)
- 16-2 A soil has a cohesion of 10 kips/ft and a friction angle of 30°. If the slope of a cut is 15°, what is the factor of safety? (Ans. 1.61)
- 16-3 A soil has a cohesion of 10 kips/ft and a friction angle of 30°. If the slope of a cut is 20°, what is the factor of safety? (Ans. 1.81)
- 16-4 A soil has a cohesion of 10 kips/ft and a friction angle of 30°. If the slope of a cut is 25°, what is the factor of safety? (Ans. 1.96)
- 16-5 A soil has a cohesion of 10 kips/ft and a friction angle of 30°. If the slope of a cut is 30°, what is the factor of safety? (Ans. 2.06)
- 16-6 A soil has a cohesion of 10 kips/ft and a friction angle of 30°. If the slope of a cut is 35°, what is the factor of safety? (Ans. 2.14)
- 16-7 What value of c in Fig. 16-4 will give $F = 1.0$ if $\phi = 30^\circ$? (Ans. 10 kips/ft)
- 16-8 Draw a graph similar to Fig. 16-4 for a soil with a cohesion of 10 kips/ft and a friction angle of 30°. (Ans. $c = 10 \tan 30^\circ$)
- 16-9 Make a plot of F versus ϕ , for example, $c = 10$ kips/ft and $\phi = 30^\circ$. Use values from Fig. 16-4 and 16-6.
- 16-10 For Fig. 16-4, what is the maximum value of R for $F = 1.25$ if $c = 10$ kips/ft? You must find it by trial.
- Figure 16-4 shows a graph of Factor of Safety (F) versus Slope Angle (ϕ). The vertical axis is labeled F and ranges from 0 to 2.0. The horizontal axis is labeled ϕ and ranges from 0 to 90° . A curve starts at the origin (0,0) and increases monotonically, approaching a horizontal asymptote at $F = 2.0$ as ϕ approaches 90° .
- Figure 16-6 shows a graph of Factor of Safety (F) versus Slope Angle (ϕ). The vertical axis is labeled F and ranges from 0 to 2.0. The horizontal axis is labeled ϕ and ranges from 0 to 90° . A curve starts at the origin (0,0) and increases monotonically, approaching a horizontal asymptote at $F = 2.0$ as ϕ approaches 90° . The curve is steeper than in Figure 16-4.
