

Revetment systems against wave attack

A design manual

Kirsty McConnell

Supervising Editor, William Allsop

 Thomas Telford

Contents

PREFACE	III
ACKNOWLEDGEMENTS	V
GLOSSARY	VII
NOTATION	IX
CONTENTS	XIII
ILLUSTRATIONS	XVII
1. INTRODUCTION	1
1.1. Structure of the manual, 3	
1.2. Terms of reference, 4	
1.3. Purpose of the manual, 4	
1.4. Definitions, 4	
2. REVETMENT FUNCTION AND PERFORMANCE	7
2.1. Revetment functions & types, 9	
2.2. Design life / performance, 9	
3. REVETMENT COMPONENTS	13
3.1. Cover layer, 15	
3.2. Filter layer, 16	
3.2.1. Granular filters, 16	
3.2.2. Geotextile filters, 16	
3.3. Other layers, 17	
3.4. Toe protection, 18	
3.5. Crest protection, 18	
3.6. Landward face of embankments, 18	
4. MATERIALS FOR REVETMENT CONSTRUCTION	19
4.1. Rock, 21	
4.2. Concrete blocks and slabbing, 23	

4.3.	Concrete mattresses, 30	
4.4	Asphalt, 32	
4.4.1.	Asphaltic concrete, 33	
4.4.2.	Mastic & grouting mortars, 34	
4.4.3.	Dense Stone Asphalt, 35	
4.4.4.	Open Stone Asphalt, 35	
4.4.5.	Lean Sand Asphalt, 36	
4.5.	Gabions, 38	
5.	IDENTIFICATION OF LIKELY FAILURE MODES	39
5.1.	Uplift pressures, 41	
5.2.	Sliding, 42	
5.3.	Wave impacts, 42	
5.4.	Scour, 42	
5.5.	Overtopping, 43	
5.6.	Geotechnical failure, 43	
6.	DESIGN PROCESS	45
6.1.	Methodology, 47	
6.2.	Information required for design, 50	
6.2.1.	Hydraulic conditions, 50	
6.2.2.	Geotechnical conditions, 50	
6.2.3.	Geometry, 51	
6.2.4.	Structure performance, 52	
6.2.5.	Constraints, 52	
7.	HYDRAULIC BOUNDARY CONDITIONS	53
7.1.	Water levels, 55	
7.1.1.	Mean water level, 55	
7.1.2.	Tides, 55	
7.1.3.	Storm surge, 56	
7.1.4.	Water level prediction, 56	
7.2.	Prediction of waves in coastal locations, 58	
7.2.1.	Deep water wave conditions, 58	
7.2.2.	Wave prediction methods, 59	
7.2.3.	Shallow water waves, 60	
7.3.	Prediction of waves on inland waters, 63	
7.3.1.	Derivation of wind speed, 63	
7.3.2.	Derivation of fetch length, 65	
7.3.3.	Wave prediction, 65	
8.	GEOTECHNICAL BOUNDARY CONDITIONS	67
8.1.	General considerations, 69	
8.2.	Grain size distribution, 69	
8.3.	Angle of internal friction, 70	
8.4.	Permeability, 71	

9. DESIGN OF INITIAL CROSS-SECTION	73
9.1. Slope, 75	
9.2. Crest elevation, 76	
9.3. Cover layer thickness, 78	
9.4. Filter, 78	
9.5. Permeability, 79	
10. DESIGN METHODS	81
10.1. Overtopping, 83	
10.2. Scour, 85	
10.3. Rock and rip-rap armour, 87	
10.3.1. Thin armour layers, 90	
10.3.2. Influence of armour grading, 91	
10.4. Concrete blockwork, 91	
10.4.1. General design method, 91	
10.4.2. Slabs, 92	
10.4.3. Cellular blockwork, 94	
10.4.4. Gravel blinding, 95	
10.4.5. Sliding, 96	
10.5. Concrete mattresses, 98	
10.6. Asphalt, 100	
10.6.1. Impermeable asphaltic revetments – uplift & sliding, 100	
10.6.2. Calculation of layer thickness for Open Stone Asphalt, 102	
10.6.3. Wave impact pressures for all asphaltic revetment types, 103	
10.6.4. Grouting of rock armour layers, 106	
10.7. Safety factors, 107	
11. DETAILED DESIGN	109
11.1. Filter, 111	
11.1.1. Granular filter design, 112	
11.1.2. Geotextile filter design, 113	
11.2. Toe protection, 114	
11.3. Crest protection, 116	
11.4. Termination details, 118	
11.5. Landward face protection, 119	
12. OTHER CONSIDERATIONS	121
12.1. Construction aspects, 123	
12.2. Specifications, 124	
12.3. Preparation of slope, 124	
12.4. Typical tolerances, 126	
13. INSPECTION, MAINTENANCE AND REPAIR	127

REVTMENT SYSTEMS AGAINST WAVE ATTACK

Appendix 1	Typical specifications, 131
Appendix 2	Example design calculations, 141
Appendix 3	Summary of design methods, 151
