Author's Preface	9
Contents	13
Introduction	17

## PART ONE

### THEORY OF SEDIMENT MOVEMENT

Chapter 1.1. Investigations on sediment and its movement	23
1.1.1. Sediment in alluvial streams	23
1.1.1.1. Sources of sediment	23
1.1.1.2. The movement of sediment	33
1.1.2. Characteristics of sediment and bed material	36
1.1.2.1. Size, shape, specific gravity and granulometry of sediment	36
1.1.2.2. The mineralogical composition of sediment	49
1.1.2.3. The fall velocity of sediment particles	55
1. The fall velocity of spherical particles	55
2. The fall velocity of particles other than spherical	70
1.1.3. Earlier theories on sediment transport in streams	80
1.1.3.1. The tractive-force formula of Du Boys	80
1.1.3.2. Earlier theories of major significance	84
1. The critical tractive force	84
2. Critical velocities	89
3. Bed load transport	96
4. Abrasion of bed load	98
5. Suspension of sediment	103
6. Suspended-sediment transport	103
1.1.3.3. Research into sediment transport	105
1.1.4. Advances in the theory of sediment transport	109
1.1.4.1. Theoretical relationships in sediment transport	109
1.1.4.2. The introduction of theoretical relations	115
1.1.5. Trends, methods and means of contemporary research	127
1.1.5.1. Recent trends in sediment research	127
1.1.5.2. Methods and means of research	129
1. Methods and devices of bed load measurements	129
a) Bed load traps	129
b) Bed load noise detectors	133
c) Tracers	133
(i) Heavy mineral tracers	134
(ii) Luminescent tracers	134
(iii) Radioactive tracers	135
(iv) Magnetic tracers	138
(v) Measuring structures	139

2. Methods and equipment for measuring suspended load	139
a) Suspended-sediment samplers	139
b) Nuclear concentration meters	141
c) Automatic samplers	142
3. Bed material samplers	142
4. Methods and means of measuring deposited sediment	143
 Chapter 1.2. Bed load	 144
1.2.1. The movement of bed load	144
1.2.2. The boundary conditions of movement	152
1.2.2.1. Initial movement and variations of the stream bed	152
1.2.2.2. The boundary conditions of movement and no movement	154
1.2.3. Criteria for the boundary conditions of bed load movement	157
1.2.4. Introduction of the variable critical tractive forces	178
1.2.4.1. Variation of the critical tractive forces	178
1.2.4.2. The law of variable critical tractive forces	186
1.2.5. The law of variable critical velocities	211
1.2.5.1. The variation of critical velocities	211
1.2.5.2. The law of variable critical velocities	223
1.2.6. Rate of bed load transport	242
1.2.6.1. Classification of bed load transport formulas	242
1.2.6.2. Theoretical relations	244
1.2.6.3. Experimental relations	257
1.2.7. Examination of transport relationships	274
1.2.7.1. Comparison of different transport relationships	274
1.2.7.2. Bed load transport parameters	286
1.2.7.3. Physical quantities controlling the rate of bed load transport	290
1.2.8. Rate of transport at given particles sizes, at constant depth, slope or discharge	291
1.2.9. Recent efforts to determine universal bed load transport formulas	299
1.2.9.1. Relationships concerning the total rate of sediment transport	299
1.2.9.2. Relationships concerning the rate of bed load transport	314
1.2.10. The wearing of bed load	328
1.2.10.1. Wearing of bed load particles in movement and at rest	328
1. Wearing of moving particles	330
a) Wearing of prismatic particles	330
b) Wearing of spherical particles	331
2. Wearing of stationary particles	332
a) Wearing of prismatic particles	332
b) Wearing of spherical particles	334
1.2.10.2. Laboratory experiments on the wearing of bed load particles in movement and at rest	336
1.2.10.3. Field observations on the wearing of bed load particles in movement and at rest	343
 Chapter 1.3. Suspended sediment	 346
1.3.1. The movement of suspended sediment	346
1.3.2. Sediment concentration and its description	348
1.3.3. Balance equations of suspended-sediment transport	351
1.3.3.1. The general transport theory	351
1.3.3.2. Balance equations of suspended-sediment transport	357
1.3.4. The theory of turbulent sediment transport	366

1.3.5.	The gravitational theory of suspended-sediment transport	385
1.3.6.	The theory of turbulent sediment transport with allowance for the energy of pulsation	399
1.3.7.	Recent sediment transport theories	409
1.3.7.1.	The theory of F. I. Frankl	410
1.3.7.2.	The theory of A. K. Ananyan	414
1.3.7.3.	The theory of I. V. Nagy	415
1.3.7.4.	The theory of V. G. Sanoyan	416
1.3.8.	Determination of the mean sediment concentration	416
1.3.9.	Suspended-sediment transport under unbalanced conditions	427
1.3.10.	Application of the relations on suspended-sediment transport in hydraulic engineering	440
1.3.10.1.	Slurry transport	440
	1. The method of G. N. Roer	448
	2. The method of A. P. Yufin	450
	3. The method of R. Durand	454
	4. The method of A. M. Tsarevsky	458
	5. The graphical method of Gy. Maurer	458
	6. The method of I. G. Haskelberg	460
	7. The method of A. Z. Yevilevicsh	461
	8. The method of S. A. Korzhaev	460
	9. The method of Goryunov	461
	10. Method suggested in a contemplated Soviet Standard Specification	465
	11. Comments on the methods listed above	468
1.3.10.2.	The settling of sediment in flowing water	475

## PART TWO

### SEDIMENT AND WATER COURSES

Chapter 2.1.	Empirical relations	485
2.1.1.	Relations determined on the basis of field measurements	485
2.1.2.	The influence of hydrological factors on sediment transport	486
2.1.3.	Empirical relations of bed load transport	500
2.1.4.	Empirical relations for transport of suspended sediment	522
2.1.5.	The ratio of suspended sediment and bed load	567
2.1.6.	Silting along backwater reaches	577
2.1.6.1.	The influence of river canalization on sediment transport	577
2.1.6.2.	Silting above barrages	580
2.1.6.3.	Control of silting in reservoirs	597
2.1.6.4.	Tailwater scouring	598
Chapter 2.2.	Sediment and the hydraulic factors of streams	600
2.2.1.	Alluvial streams	600
2.2.1.1.	The velocity of flow in alluvial channels	601
2.2.1.2.	Roughness conditions in alluvial channels	609
2.2.2.	The hydraulic geometry of streams	618
2.2.3.	The influence of hydraulic factors on bed load transport	623
2.2.4.	The influence of hydraulic factors on suspended-sediment transport	626
Chapter 2.3.	The regime theory	630
2.3.1.	Review of historical development	630
2.3.1.1.	The concept of the stable channel	630

2.3.1.2.	Historical development	633
2.3.2.	Equations applying to non-silting and non-scouring canals	639
2.3.3.	New trends in the regime theory	652
Chapter 2.4.	Sediment transport and river regulation	654
2.4.1.	Principles and methods in contemporary river regulation	654
2.4.2.	The influence of sediment conditions in selecting regulation methods	657
Chapter 2.5.	Hydraulic similarity in sediment transport	660
2.5.1.	Hydraulic similarity in model tests of sediment-carrying streams	660
2.5.1.1.	The problem of similarity	660
2.5.1.2.	Evolution of model-testing of sediment-carrying water courses	673
2.5.2.	The Einstein—Ning Chien method	681
2.5.3.	The Einstein—Ning Chien method modified by the author	689
2.5.4.	Further methods related to the hydraulic similarity of alluvial streams	708
2.5.4.1.	Yalin's method	708
2.5.4.2.	The investigations of Komura	711
2.5.4.3.	The method of Zwamborn	713
2.5.4.4.	The method of Herbertson	714

### PART THREE

#### PRACTICAL INTERPRETATION OF SEDIMENT OBSERVATIONS

Chapter 3.1.	Data processing and methodology	717
3.1.1.	Examples for processing sediment observation data	717
3.1.1.1.	Observation data on sediment transport	717
3.1.1.2.	Methodology	718
1.	Correlation by graphical and analytical methods	719
2.	Graphical correlation when power functions are grossly misleading	721
3.	Determination of the highest transport rate expected	724
4.	Sediment transport related to stages on other gages. Three-variable relations	727
5.	Sediment transport related to seasons and to the character of stages	733
6.	Determination of the annual mean sediment transport	735
7.	Checks on sediment transport relations by means of hydraulic conditions	735
8.	Variations in sediment concentration and flow velocity with depth and cross-section	752
9.	Formulae describing the variation in sediment concentration with depth	753
3.1.2.	Sediment transport in water courses in Hungary	762
