# Contents

Preface	xi
Units and Symbols	xiii
<b>Part A: Illustrative worked examples — Questions and answers</b>	
<b>1 Introduction</b>	<b>3</b>
1.1 The subject of engineering rock mechanics	3
1.2 Questions and answers: introduction	5
1.3 Additional points	8
<b>2 Geological setting</b>	<b>13</b>
2.1 Rock masses	13
2.2 Questions and answers: geological setting	19
2.3 Additional points	26
<b>3 Stress</b>	<b>27</b>
3.1 Understanding stress	27
3.2 Questions and answers: stress	30
3.3 Additional points	37
<b>4 <i>In situ</i> rock stress</b>	<b>39</b>
4.1 The nature of <i>in situ</i> rock stress	39
4.2 Questions and answers: <i>in situ</i> rock stress	42
4.3 Additional points	56
<b>5 Strain and the theory of elasticity</b>	<b>57</b>
5.1 Stress and strain are both tensor quantities	57
5.2 Questions and answers: strain and the theory of elasticity	60
5.3 Additional points	68
<b>6 Intact rock: deformability, strength and failure</b>	<b>71</b>
6.1 Intact rock	71
6.2 Questions and answers: intact rock	74
6.3 Additional points	87

<b>7 Fractures and hemispherical projection</b>	<b>89</b>
7.1 Natural, pre-existing fractures	89
7.2 Questions and answers: fractures and hemispherical projection	100
7.3 Additional points	115
<b>8 Rock masses: deformability, strength and failure</b>	<b>117</b>
8.1 The nature of rock masses	117
8.2 Questions and answers: rock masses	122
8.3 Additional points	138
<b>9 Permeability</b>	<b>141</b>
9.1 Permeability of intact rock and rock masses	141
9.2 Question and answers: permeability	144
9.3 Additional points	157
<b>10 Anisotropy and inhomogeneity</b>	<b>159</b>
10.1 Rock masses: order and disorder	159
10.2 Questions and answers: anisotropy and inhomogeneity	161
10.3 Additional points	172
<b>11 Testing techniques</b>	<b>175</b>
11.1 Rock properties	175
11.2 Questions and answers: testing techniques	176
11.3 Additional points	192
<b>12 Rock mass classification</b>	<b>193</b>
12.1 Rock mass parameters and classification schemes	193
12.2 Questions and answers: rock mass classification	194
12.3 Additional points	212
<b>13 Rock dynamics and time dependency</b>	<b>215</b>
13.1 Strain rates	215
13.2 Questions and answers: rock dynamics and time dependency	217
13.3 Additional points	228
<b>14 Rock mechanics interactions and rock engineering systems</b>	<b>231</b>
14.1 Interactions	231
14.2 Questions and answers: rock mechanics interactions and rock engineering systems	234
14.3 Additional points	244
<b>15 Excavation principles</b>	<b>247</b>
15.1 Rock excavation	247
15.2 Questions and answers: excavation principles	250
15.3 Additional points	262
<b>16 Rock reinforcement and rock support</b>	<b>265</b>
16.1 The stabilization system	265
16.2 Questions and answers: rock reinforcement and rock support	267
16.3 Additional points	281

<b>17 Foundation and slope instability mechanisms</b>	<b>285</b>
17.1 Near-surface instability	285
17.2 Question and answers: foundation and slope instability mechanisms	288
17.3 Additional points	309
<b>18 Design of surface excavations</b>	<b>311</b>
18.1 The project objective	311
18.2 Questions and answers: design of surface excavations	314
18.3 Additional points	337
<b>19 Underground excavation instability mechanisms</b>	<b>339</b>
19.1 Underground instability	339
19.2 Questions and answers: underground excavation instability mechanisms	343
19.3 Additional points	369
<b>20 Design of underground excavations</b>	<b>373</b>
20.1 The project objective	373
20.2 Question and answers: design of underground excavations	375
20.3 Additional points	397

## **Part B: Questions only**

*The Questions in Part A are reproduced here without the answers for those who wish to attempt the questions without the answers being visible.*

<b>Questions 1.1–1.5: introduction</b>	<b>401</b>
<b>Questions 2.1–2.10: geological setting</b>	<b>403</b>
<b>Questions 3.1–3.10: stress</b>	<b>407</b>
<b>Questions 4.1–4.10: <i>in situ</i> rock stress</b>	<b>409</b>
<b>Questions 5.1–5.10: strain and the theory of elasticity</b>	<b>413</b>
<b>Questions 6.1–6.10: intact rock</b>	<b>417</b>
<b>Questions 7.1–7.10: fractures and hemispherical projection</b>	<b>421</b>
<b>Questions 8.1–8.10: rock masses</b>	<b>425</b>
<b>Questions 9.1–9.10: permeability</b>	<b>431</b>
<b>Questions 10.1–10.10: anisotropy and inhomogeneity</b>	<b>437</b>
<b>Questions 11.1–11.10: testing techniques</b>	<b>441</b>
<b>Questions 12.1–12.10: rock mass classification</b>	<b>447</b>
<b>Questions 13.1–13.10: rock dynamics and time dependency</b>	<b>451</b>
<b>Questions 14.1–14.10: rock mechanics interactions and rock engineering systems</b>	<b>455</b>
<b>Questions 15.1–15.10: excavation principles</b>	<b>459</b>
<b>Questions 16.1–16.10: rock reinforcement and rock support</b>	<b>465</b>

Questions 17.1–17.10: foundation and slope instability mechanisms	469
Questions 18.1–18.10: design of surface excavations	473
Questions 19.1–19.10: underground excavation instability mechanisms	477
Questions 20.1–20.10: design of underground excavations	481
