Preface	lxv

I. BASIC BEHAVIOR AND SITE CHARACTERIZATION 1

1. Introduction 3

R. K. Rowe

- 1.1 Geotechnical and geoenvironmental engineering 3
- 1.2 Objectives and organization of the book 3
- 1.3 Limitations 5

2. Basic Soil Mechanics 7

P. V. Lade

- 2.1 Introduction 7
- 2.2 Soil types: geologic formation and classification 7
 - 2.2.1 Basic elements, soil forming minerals and types of rock 7
 - 2.2.2 The geologic cycle, soil forming processes and types of soil 8
 - 2.2.3 Soil fabric and structure 9
 - 2.2.3.1 Clay fabric 10
 - 2.2.3.2 Fabric of granular soils 10
- 2.3 Definitions and relationships between basic soil properties 11
- 2.4 Seepage through saturated soil 11
 - 2.4.1 Basic head equations 11
 - 2.4.2 Darcy's law and hydraulic conductivity 13
- 2.5 Basic mechanics 13
 - 2.5.1 Analyses of stress: Mohr's circle 13
 - 2.5.2 Analyses of strain: Mohr's circle 15
 - 2.5.3 Other stress representations and stress paths 16
 - 2.5.3.1 $s-t$ diagram 16
 - 2.5.3.2 $p-q$ diagram 17
- 2.6 State of stress in the ground 17
 - 2.6.1 Effective stress principle 17
 - 2.6.2 Total vertical (overburden) stress 17
 - 2.6.3 Groundwater table and porewater pressure 18
 - 2.6.4 Effective vertical stress 18
 - 2.6.5 Horizontal stress and K_0 19
- 2.7 Compressibility and consolidation 19
 - 2.7.1 Elasticity 19
 - 2.7.2 Modulus variation 20
 - 2.7.3 Compression and expansion 21
 - 2.7.4 One-dimensional consolidation 23
 - 2.7.5 Creep 26

2.8	Stress–Strain and strength behavior	28
2.8.1	Drained behavior of sand	28
2.8.2	Undrained behavior of sand	31
2.8.3	Undrained behavior of normally consolidated clay	31
2.8.4	Undrained behavior of overconsolidated clay	31
2.8.5	Drained behavior of clay	33
2.9	Shear strength	34
2.9.1	Effective strength characterization	34
2.9.2	Total strength characterization	35
2.10	Elasto-plasticity, critical state soil mechanics and models for soil stress–strain behavior	36
2.10.1	Critical state soil mechanics	36
2.10.2	Modified Cam Clay model	37
2.10.3	Other models	39
2.11	Dynamic soil behavior	40
2.11.1	Determination of modulus and damping	40
2.11.2	Seismic stability of soil structures	41
3.	Engineering Properties of Soils and Typical Correlations	43
	<i>P. V. Lade</i>	
3.1	Engineering properties and parameters required for characterization	43
3.2	Index tests	43
3.2.1	Grain-size distribution	43
3.2.1.1	Coefficients of uniformity and curvature	43
3.2.2	Particle shape	45
3.2.3	Maximum and minimum void ratios	45
3.2.4	Density index	45
3.2.5	Relative compaction	46
3.2.6	Relative density	46
3.2.7	Atterberg limits	46
3.2.7.1	Liquid limit	46
3.2.7.2	Plastic limit	47
3.2.7.3	Plasticity index	47
3.2.7.4	Liquidity index	48
3.2.7.5	Activity	48
3.2.7.6	Shrinkage limit	48
3.2.8	Expansion index	48
3.2.9	Sensitivity	49
3.2.10	Content of organic material	49
3.2.11	Soil classification	51
3.3	Hydraulic conductivity	51
3.3.1	Laboratory hydraulic conductivity (permeability) tests	51
3.3.2	Typical hydraulic conductivity values and correlations	54
3.4	At rest stress state, K_0	54
3.4.1	Normally consolidated soils	54
3.4.2	Overconsolidated soils	54
3.5	Compressibility and consolidation	55
3.5.1	Elastic properties	55
3.5.1.1	Young's modulus	55
3.5.1.2	Poisson's ratio	55
3.5.2	Compressibility	56
3.5.2.1	Preconsolidation pressure	56
3.5.2.2	Virgin compression	56
3.5.2.3	Swelling and recompression	57
3.5.3	Coefficient of consolidation	57

3.5.4	Creep	58
3.5.5	Remolded or disturbed soils	58
3.6	Swelling and shrinkage	58
3.7	Shear strength	59
3.7.1	Laboratory determination of soil behavior	59
3.7.2	Effective strength parameters	60
3.7.2.1	Granular materials: cohesionless soils	60
3.7.2.2	Clays: cohesive soils	61
3.7.3	Undrained shear strength	62
3.7.3.1	Normally consolidated clays	62
3.7.3.2	Overconsolidated clays	63
3.8	Dynamic properties	64
3.8.1	Shear modulus and damping: low strain level excitation	64
3.8.2	Shear modulus and damping: high strain level excitation	67
4.	Site Characterization	69
	<i>D. E. Becker</i>	
4.1	Introduction	69
4.1.1	The need for site characterization	69
4.1.2	Objectives of site characterization	70
4.2	Site characterization process: an integrated approach	70
4.2.1	Site characterization flowchart	72
4.2.2	Reporting	73
4.3	Planning and design of characterization study	74
4.3.1	Role of codes of practice and guidelines	75
4.3.2	Quality management of site investigation	75
4.3.3	Scope of investigation	75
4.3.4	Selection of field equipment and test methods	78
4.3.5	Cost considerations	79
4.3.6	Offshore investigations	79
4.3.7	Contractual aspects	80
4.4	Investigation components and methods	80
4.4.1	Review of background and existing information	80
4.4.2	Aerial photographs and remote sensing	80
4.4.3	Field reconnaissance and mapping	81
4.4.4	Geophysical surveys	81
4.4.5	Borehole drilling and sampling methods	84
4.4.5.1	Backfilling and sealing of boreholes	86
4.4.6	Field and <i>in situ</i> testing	87
4.4.6.1	Standard penetration test (SPT)	89
4.4.6.2	Dynamic cone-penetration test (DCPT)	91
4.4.6.3	Dynamic probing (DP)	91
4.4.6.4	Becker penetration test (BPT)	91
4.4.6.5	Field vane test (FVT)	92
4.4.6.6	Piezo-cone penetration test (CPTU)	92
4.4.6.7	Pressuremeter test (PMT)	93
4.4.6.8	Dilatometer test (DMT)	94
4.4.6.9	Plate-load and screw-plate tests	94
4.4.6.10	Other tests to measure <i>in situ</i> horizontal stress	94
4.5	Interpretation of engineering characteristics and properties based on <i>in situ</i> tests	96
4.5.1	Use of statistical methods	97
4.6	Observational approach and monitoring	97
4.6.1	Field instrumentation and monitoring	100

4.7	Characterization of groundwater	101
4.7.1	Water levels, piezometric pressures and sampling	102
4.7.2	<i>In situ</i> hydraulic conductivity tests	103
4.8	Environmental site characterization	104
4.8.1	Investigation of landfills and contaminated land	104
5.	Unsaturated Soil Mechanics and Property Assessment	107
	<i>D. G. Fredlund, G. W. Wilson and S. L. Barbour</i>	
5.1	Introduction	107
5.1.1	Basic concepts in unsaturated soil mechanics	109
5.2	Soil-water characteristic curve	110
5.2.1	Stages of the soil-water characteristic curve	111
5.2.2	Residual conditions for a soil	113
5.2.3	Mathematical form for the soil-water characteristic curve	114
5.2.4	Laboratory measurement of the soil-water characteristic curve	116
5.2.5	Estimation of the soil-water characteristic curve	117
5.3	Stress state variables of unsaturated soils	120
5.3.1	Measurement of soil suction: matric, osmotic and total suction	121
5.4	Boundary conditions	122
5.4.1	Evaporation, evapotranspiration, and the prediction of the flux boundary condition	124
5.5	Seepage through unsaturated soils	125
5.5.1	Hydraulic conductivity function	126
5.5.2	The water storage function	128
5.5.3	Measurement of the hydraulic conductivity function	128
5.5.4	Estimation of the hydraulic conductivity function and the water storage function from the soil-water characteristic curve	130
5.5.5	Estimation of the water storage function from the soil-water characteristic curve	133
5.5.6	Formulation of the steady state and unsteady state seepage analysis	133
5.6	Shear strength of unsaturated soils	134
5.6.1	Shear strength function with respect to soil suction	134
5.6.2	Measurement of the shear strength function with respect to soil suction	135
5.6.3	Estimation of the shear strength function from the soil-water characteristic curve	136
5.6.4	Formulation for bearing capacity problems	140
5.6.5	Formulation for lateral earth pressure problems	140
5.6.6	Formulations for slope stability problems	140
5.7	Volume change in unsaturated soils	142
5.7.1	Measurement of the volume change function	143
5.7.2	Estimation of the volume change moduli	144
5.7.3	Formulation for the prediction of heave of an expansive soil	144
6.	Basic Rock Mechanics and Testing	147
	<i>K. Y. Lo and A. M. Hefny</i>	
6.1	Introduction	147
6.2	Types of rocks and their classification	147
6.2.1	Rock-forming minerals	147
6.2.2	Rock classification	147
6.2.2.1	Geological classification	148
6.2.2.2	Engineering classification	150
6.3	Laboratory measurements of strength and deformation properties of intact rock	154
6.3.1	Uniaxial compression test	155

6.3.2	Deformation parameters for cross-anisotropic rocks	155
6.3.2.1	Stress-strain relationships in cross-anisotropic rocks	155
6.3.2.2	Evaluation of parameters	157
6.3.2.3	Results of uniaxial compression test	157
6.3.3	Tensile strength tests	157
6.3.3.1	Brazilian test (indirect tension test)	157
6.3.3.2	Direct tension test	159
6.3.4	Triaxial compression test	159
6.3.5	Triaxial extension test	159
6.4	Time-dependent deformation	159
6.4.1	Free swell test	161
6.4.2	Semi-confined swell test	162
6.5	Failure criteria of a brittle material	163
6.5.1	Griffith criterion	164
6.5.2	Hoek-Brown failure criterion	164
6.6	Shear strength of discontinuities	166
6.6.1	Description and measurement of discontinuities	166
6.6.2	Determination of basic friction angle	166
6.6.3	Typical results of tests on rock joints	168
6.7	Measurements of <i>in situ</i> horizontal stresses in rock	168
6.7.1	The United States Bureau of Mines (USBM) method	168
6.7.1.1	Example of calculations	170
6.7.2	Hydraulic fracturing method	171
7.	Geosynthetics: Characteristics and Testing	173
	<i>R. M. Koerner and Y. G. Hsuan</i>	
7.1	Introduction	173
7.2	Geotextile properties and test methods	174
7.2.1	Physical properties	174
7.2.2	Mechanical properties	174
7.2.3	Hydraulic properties	176
7.2.4	Endurance properties	177
7.3	Geogrid properties and test methods	179
7.3.1	Physical properties	180
7.3.2	Mechanical properties	180
7.3.3	Endurance properties	180
7.4	Geonet properties and test methods	180
7.4.1	Physical and mechanical properties	181
7.4.2	Hydraulic properties	181
7.4.3	Endurance properties	181
7.5	Geomembrane properties and test methods	181
7.5.1	Physical properties	182
7.5.2	Mechanical properties	183
7.5.3	Endurance properties	185
7.6	Geosynthetic clay liner properties and test methods	185
7.6.1	Physical properties	186
7.6.2	Hydraulic properties	186
7.6.3	Mechanical properties	186
7.6.4	Endurance properties	187
7.7	Geocomposite properties and test methods	187
7.7.1	Separation geocomposites	187
7.7.2	Reinforcement geocomposites	187
7.7.3	Filtration geocomposites	188

7.7.4	Drainage geocomposites	188
7.7.5	Containment (barrier) geocomposites	188
7.8	Degradation mechanisms for polymers	188
7.8.1	Oxidation degradation	188
7.8.1.1	Oxidation degradation mechanisms of polyolefins	189
7.8.1.2	Accelerated tests and lifetime predictions	190
7.8.2	Ultraviolet degradation	190
7.8.3	Biological degradation	191
7.8.4	Hydrolytic degradation	191
7.9	Allowable versus ultimate geotextile and geogrid properties	192
7.9.1	Strength related applications	193
7.9.1.1	Allowable strength approach	193
7.9.1.2	Limit state approach	193
7.9.2	Liquid flow related applications	194
7.10	Summary	194

8. Seepage, Drainage and Dewatering 197

R. W. Loughney

8.1	Introduction	197
8.2	Geology, hydrogeology and hydrology	197
8.2.1	Geology	197
8.2.2	Hydrogeology	197
8.2.3	Hydrology	198
8.2.3.1	Basic flow equations	198
8.2.3.2	Graphical approach	200
8.3	Seepage and drainage	205
8.3.1	Seepage	205
8.3.2	Drainage	205
8.4	Area to be dewatered	206
8.5	Assessment of groundwater conditions	207
8.6	Selection of dewatering systems	208
8.6.1	Dewatering systems	208
8.6.2	Soil stabilization systems	208
8.6.2.1	Vacuum applied to the soil	208
8.6.2.2	Electro-osmosis	213
8.6.3	Cut-off walls: grouting and freezing	214
8.6.4	Open pumping	214
8.6.5	Recharge	214
8.7	Design of the dewatering system	214
8.7.1	Well-screens	215
8.7.2	Filter packs	216
8.7.3	Pump units	217
8.7.4	Piping and fittings	217
8.8	Installation, operation and removal of dewatering systems	218
8.8.1	Installation	218
8.8.2	Operation	218
8.8.3	Removal	218
8.9	Permanent dewatering system	218
8.10	Dewatering specifications	218
8.10.1	Specified end result	219
8.10.2	Specified minimum groundwater control system	219
8.10.3	Specified complete groundwater control system	219
8.10.4	Specialty contractors responsibility	220
8.11	Summary	220

II. FOUNDATIONS AND PAVEMENTS 221

9. Shallow Foundations 223

J. C. Small

- 9.1 Introduction 223
- 9.2 Types of Shallow Foundations 223
 - 9.2.1 Strip footings 223
 - 9.2.2 Pad footings 223
 - 9.2.3 Combined footings 224
 - 9.2.4 Raft or mat foundations 224
 - 9.2.5 Inspection 224
- 9.3 Bearing capacity 224
 - 9.3.1 Uniform soils 225
 - 9.3.1.1 Undrained case 227
 - 9.3.1.2 Drained case 227
 - 9.3.1.3 Accuracy of Terzaghi's factors 228
 - 9.3.1.4 Effect of footing shape 228
 - 9.3.1.5 Net bearing capacity 228
 - 9.3.1.6 General formulae 229
 - 9.3.1.7 Soil layers of finite depth 232
 - 9.3.2 Non-uniform soils 232
 - 9.3.2.1 Strength increasing with depth 234
 - 9.3.2.2 Fissured clays 235
 - 9.3.2.3 Footings on slopes 237
 - 9.3.2.4 Layered soils 238
- 9.4 Settlement 240
 - 9.4.1 Limits of settlement 240
 - 9.4.2 Settlement computation 240
 - 9.4.3 Theory of elasticity 242
 - 9.4.3.1 One-dimensional conditions 242
 - 9.4.3.2 Three-dimensional problems 242
 - 9.4.4 Rate of settlement 244
 - 9.4.5 Numerical approaches 246
 - 9.4.5.1 Layered soil: finite layer approaches 246
 - 9.4.5.2 Non-linear materials 246
 - 9.4.6 Settlement of footings on sand 247
 - 9.4.6.1 Methods based on the standard penetration test (SPT) 247
 - 9.4.6.2 Method based on static cone penetrometer 249
 - 9.4.7 Methods based on settlement and bearing criteria 250
 - 9.4.8 Estimating the soil parameters 252
- 9.5 Raft foundations 252
 - 9.5.1 Strip rafts 253
 - 9.5.2 Circular rafts 253
 - 9.5.3 Rectangular rafts 255
 - 9.5.4 Raft foundations of general shape 256
- 9.6 Reactive soils 257
 - 9.6.1 Rafts on reactive soils 257
- 9.7 Cold climates 257
- 9.8 Limit state design 258

10. Pile Foundations 261

H. G. Poulos

- 10.1 Introduction 261

10.1.1	Design objectives	261
10.1.2	Criteria for design	261
10.1.3	Types of piles and their uses	262
10.2	Pile load capacity	263
10.2.1	Dynamic calculation methods	263
10.2.2	Static calculation methods	264
10.2.2.1	General principles	264
10.2.2.2	Saturated clay soils: α method	264
10.2.2.3	Saturated clay soils: β method	265
10.2.2.4	Non-cohesive soils	266
10.2.2.5	Layered soils	267
10.2.3	Methods using <i>in situ</i> test data	268
10.2.3.1	Static cone penetration (CPT) tests	268
10.2.3.2	Standard penetration test (SPT)	268
10.2.4	Uplift capacity	271
10.2.5	Group effects	271
10.2.6	Effects of cyclic loading	271
10.3	Settlement prediction	273
10.3.1	Analysis methods	273
10.3.2	Design charts and equations for single piles	274
10.3.2.1	Non-linear analysis	275
10.3.3	Pile group settlement	275
10.3.3.1	Methods of analysis	275
10.3.3.2	Rapid practical estimation of group settlements	278
10.3.4	Assessment of parameters	280
10.4	Lateral loading	283
10.4.1	Ultimate lateral capacity	283
10.4.1.1	Single piles	283
10.4.1.2	Pile groups	284
10.4.2	Lateral deflection of single piles	285
10.4.2.1	p - y analysis	285
10.4.2.2	Linear elastic solutions	285
10.4.2.3	Non-linear solutions	287
10.4.3	Group effects	287
10.4.4	Assessment of parameters	288
10.4.5	Effects of cyclic loading	290
10.5	General analysis of pile groups	292
10.5.1	Methods of analysis	292
10.5.2	Some elastic-based computer methods	293
10.6	Pile response to externally imposed ground movements	293
10.6.1	Introduction: sources of ground movement	293
10.6.2	Negative friction	294
10.6.3	Expansive soils	296
10.6.4	Piles subjected to lateral ground movements	296
10.6.5	Specific applications	298
10.6.5.1	Piles in unstable slopes	299
10.6.5.2	Piles near an excavation	299
10.6.5.3	Piles in and near embankments	299
10.7	Pile load testing	299
10.7.1	Introduction	299
10.7.2	Static load testing	300
10.7.3	Dynamic pile testing	300
10.7.4	Statnamic testing	301

10.7.5	Interpretation of load test results	302
10.7.5.1	Ultimate load	302
10.7.5.2	Load distribution	302
10.7.5.3	Soil stiffness	303
10.7.6	Integrity testing	303
11.	Foundations on Rock	305
	<i>K. Y. Lo and A. M. Hefny</i>	
11.1	Introduction	305
11.2	Foundations for tall buildings	305
11.2.1	Design considerations	305
11.2.1.1	Bearing capacity	305
11.2.1.2	Allowable bearing pressure	305
11.2.1.3	Differential settlement	309
11.2.1.4	Effect of excavations in rock on adjacent structures	309
11.2.1.5	Base heave	310
11.2.2	Field tests for the measurement of rock mass modulus	310
11.2.3	Socketed piles into rock	313
11.2.3.1	End bearing resistance	314
11.2.3.2	Shaft resistance	314
11.2.3.3	Estimation of average side shear resistance using empirical correlations	314
11.2.3.4	Design of piles socketed into rock	316
11.3	Concrete dams on rock foundations	318
11.3.1	Introduction	318
11.3.2	Methodology	319
11.3.3	Methods of field investigation	319
11.3.4	Strength envelopes of bonded and unbonded contacts	323
11.3.5	Extraction of data from records	326
11.3.6	Methods currently used in stability analysis	327
11.3.7	An example of application of methodology: safety assessment of Barrett Chute Dam	329
11.3.7.1	Design provisions and geological conditions	329
11.3.7.2	Field investigation and condition of contact	330
11.3.7.3	Results of laboratory tests and strength parameters for design analysis	330
11.3.7.4	High uplift pressures measured and remedial measures	331
11.3.7.5	Stability study	332
11.3.8	Experience gained and benefits derived from application of the methodology	332
12.	Dynamics of Foundations	337
	<i>M. H. El Naggar</i>	
12.1	Introduction	337
12.1.1	Design objectives	337
12.1.2	Types of dynamic loads	337
12.1.3	Types of foundations	338
12.2	Shallow foundations	338
12.2.1	Impedance functions of shallow foundations	338
12.2.2	Embedment effects	341
12.2.3	Impedance functions of a layer on halfspace	342
12.3	Deep foundations	344
12.3.1	Impedance functions of piles	344
12.3.2	Pile-soil-pile interaction	346

12.3.3	Impedance functions of pile groups	347
12.3.4	Pile batter	348
12.3.5	Non-linear response of piles	348
12.3.6	Seismic response of pile foundations	348
12.3.7	Experimental studies on response of piles	349
12.3.7.1	Full-scale field tests	349
12.3.7.2	Small prototype field tests	349
12.3.7.3	Small-scale laboratory tests	350
12.3.7.4	Centrifugal modeling	350
12.4	Response of machine foundations	350
12.4.1	Response of rigid foundations in one degree-of-freedom	350
12.4.2	Coupled response of rigid foundations	351
12.4.2.1	Direct solution	351
12.4.2.2	Modal analysis	352
12.4.3	Response of rigid foundations in six degrees-of-freedom	353
12.5	Response of hammer foundations	355
12.5.1	Types of hammers and hammer foundations	355
12.5.2	Design criteria	355
12.5.3	Response of one mass foundation	356
12.5.4	Response of two mass foundation	357
13.	Pavement Design	361
	<i>R. Haas and B. L. Rodway</i>	
13.1	Introduction	361
13.2	Geotechnical and environmental considerations	361
13.2.1	Soils investigation and engineering properties	362
13.2.2	Drainage	363
13.2.3	Compaction	364
13.2.3.1	Basic principles	364
13.2.3.2	Compaction of soils	364
13.2.3.3	Construction equipment for soil compaction	365
13.2.3.4	Compaction of asphalt layers	365
13.2.3.5	Specifications for compaction of asphalt layers	366
13.2.3.6	Asphalt compaction equipment	366
13.2.4	Geosynthetics in pavements	366
13.2.5	Environmental considerations	368
13.3	Framework for pavement design	369
13.3.1	Introduction	369
13.3.2	Design objectives and constraints	369
13.3.3	Components of the design framework	369
13.3.4	Categorization of structural design methods	370
13.4	Design inputs and their characterization	371
13.4.1	Material properties and characterization	371
13.4.1.1	Asphalt concrete	371
13.4.1.2	Portland cement concrete	372
13.4.1.3	Granular bases and subbases	372
13.4.1.4	Reinforcement steel	372
13.4.1.5	Traffic loads	374

III. SLOPE, EMBANKMENT AND WALL STABILITY, AND SOIL IMPROVEMENT 395

14. Slopes and Mass Movements 397

S. Leroueil, J. Locat, G. Sève, L. Picarelli and R. M. Faure

14.1	Introduction	397
14.2	Types of movements	399
14.3	Importance of groundwater conditions in slopes	399
14.3.1	Water flow conditions in soil slopes	399
14.3.2	Particular case of excavations in clays	401
14.3.3	Triggering or aggravating factors related to water	402
14.3.4	Flow nets	402
14.3.5	Particular case of rock slopes	403
14.4	Analysis of slope movements: generalities	404
14.4.1	Pre-failure	405
14.4.2	Failure	406
14.4.3	Post-failure	407
14.4.4	Reactivation	408
14.5	Methods of slope stability analysis	409
14.5.1	General remarks	409
14.5.2	Infinite slope	411
14.5.3	Methods of slices	412
14.5.4	Global method: perturbation method	414
14.5.5	Planar failure	415
14.5.6	Wedge failure	416
14.5.7	Toppling failure	418

14.6 Risk assessment associated to slope movements	420
14.6.1 Total risk	420
14.6.2 Elements at risk and their vulnerability	421
14.6.3 Hazard	421
14.6.4 Tolerable risk	422
14.7 Methods of mitigation	423
14.7.1 Generalities	423
14.7.2 Elimination of the problem or reduction of its consequences	423
14.7.2.1 Relocation	423
14.7.2.2 Complete or partial removal of unstable materials	423
14.7.2.3 Bridging	423
14.7.2.4 Protection of the structures against soil or rock movements	423
14.7.3 Earthworks	424
14.7.4 Earth retaining systems	424
14.7.5 Drainage systems	424
14.7.6 <i>In situ</i> reinforcement	426
14.7.7 Anchor systems	427
14.7.8 Vegetation	427
14.7.9 Special techniques	427
14.8 Warning systems	427

15. Soil Improvement 429

R. D. Holtz, J. Q. Shang and D. T. Bergado

15.1 Introduction	429
15.2 Foundation soil improvement techniques	432
15.2.1 Lightweight fill	432
15.2.2 Removal and replacement	433
15.2.3 Consolidation	434
15.2.3.1 Dewatering and groundwater control	434
15.2.3.2 Preloading by surcharge	434
15.2.3.3 Preloading by vacuum	436
15.2.3.4 Consolidation with vertical drains	437
15.2.3.5 Prefabricated vertical drains	441
15.2.4 Chemical, thermal and electrical stabilization	443
15.2.4.1 Stabilization by chemical admixtures	444
15.2.4.2 Lime and lime-cement columns	444
15.2.4.3 Deep soil mixing	445
15.2.4.4 Intrusion and permeation grouting	445
15.2.4.5 Jet grouting	447
15.2.4.6 Thermal treatment	447
15.2.4.7 Artificial ground freezing	448
15.2.4.8 Electro-osmotic and electro-kinetic stabilization	449
15.2.5 Physical stabilization and densification	452
15.2.5.1 Preloading	452
15.2.5.2 Compaction grouting	452
15.2.5.3 Dynamic compaction	453
15.2.5.4 Blast densification	454
15.2.5.5 Vibro-compaction and vibro-replacement	454
15.2.5.6 Inundation (hydromechanical compaction)	456
15.2.5.7 Compaction piles	456
15.2.5.8 Reinforcement of embankments and foundations	457
15.3 Stabilization of slopes	457
15.3.1 Dewatering and groundwater control	458
15.3.2 Ground anchors and tiebacks	458

15.3.3	Soil nailing	458	
15.3.4	Micropiles, root piles and pin piles	458	
15.3.5	Biotechnical stabilization	459	
15.4	Verification and evaluation of soil improvement	460	
15.4.1	Inspection during construction	460	
15.4.2	Verification of foundation improvement	460	
15.4.3	Instrumentation	461	
	15.4.3.1 Instrumentation and monitoring during construction	461	
	15.4.3.2 Post-construction monitoring	461	
16.	Embankments Over Soft Soil and Peat	463	
	<i>S. Leroueil and R. K. Rowe</i>		
16.1	General behavior of clay foundations under embankments	463	
	16.1.1 Behavior during construction	463	
	16.1.2 Clay behavior after the end of construction	466	
	16.1.3 Stage construction	467	
	16.1.4 Pore pressures	467	
16.2	General behavior of reinforced embankments on clay foundations	468	
16.3	General behavior of peat deposits under embankments	470	
	16.3.1 Peat characteristics	470	
	16.3.2 Pore pressures	471	
	16.3.3 Behavior during and after construction	472	
16.4	Settlements	473	
	16.4.1 Stress distribution under embankments	473	
	16.4.2 Construction settlement	474	
	16.4.3 Long-term settlement	475	
	16.4.3.1 Primary consolidation settlement	475	
	16.4.3.2 Contribution of the viscosity of clay to total settlement	475	
	16.4.4 Effect of embankment reinforcement on settlement	477	
	16.4.5 Settlement of embankments on peat	478	
16.5	Lateral displacements	480	
16.6	Consolidation	481	
	16.6.1 Primary consolidation	481	
	16.6.2 Consideration of viscous and structuring effects	483	
16.7	Stability	484	
	16.7.1 General remarks	484	
	16.7.2 Embankments constructed in one stage	484	
	16.7.2.1 Evaluation of mobilized shear strength, s_u	484	
	16.7.2.2 Strength of the weathered crust	486	
	16.7.2.3 Estimation of stability	486	
	16.7.3 Choice of strength for embankments constructed in several stages	487	
16.8	Solutions to problems of stability and settlement	487	
	16.8.1 General	487	
	16.8.2 Berms	488	
	16.8.3 Reinforced embankments on soft clay	488	
	16.8.3.1 General considerations	488	
	16.8.3.2 Bearing capacity limits on reinforced embankment height	489	
	16.8.3.3 Selecting reinforcement properties	492	
	16.8.4 Reinforced embankments on peat	495	
	16.8.4.1 Problem definition	495	
	16.8.4.2 Peat underlain by a firm base	495	
	16.8.4.3 Peat underlain by a soft clay/marl layer	496	
16.9	Practical considerations: construction, instrumentation and observation analysis	496	
	16.9.1 Design and construction	497	

- 16.9.2 Instrumentation 498
 16.9.3 Observation analysis 498

17. Earth Retaining Structures and Reinforced Slopes 501

R. J. Bathurst and C. J. F. P. Jones

- 17.1 Introduction 501
- 17.1.1 Types of earth retaining structures 501
 - 17.1.2 Selection of type of retaining wall 504
 - 17.1.3 Reinforced slopes 506
 - 17.1.4 Soil reinforcement concepts 506
 - 17.1.4.1 Reinforcement 506
 - 17.1.4.2 Soil 506
 - 17.1.5 Global factor design approach 507
 - 17.1.6 Limit states design approach 508
- 17.2 Earth pressure theory 508
- 17.2.1 Earth pressure at rest 508
 - 17.2.2 Rankine earth pressure theory 508
 - 17.2.3 Compaction stresses 511
 - 17.2.4 Coulomb wedge methods 513
 - 17.2.5 Other 515
- 17.3 Conventional retaining walls 516
- 17.3.1 Gravity and cantilever walls 516
 - 17.3.2 Sheet pile walls (cantilever and anchored) 517
 - 17.3.3 Braced excavations 518
 - 17.3.4 Other types of retaining structures (diaphragm walls and cut-offs) 520
- 17.4 Reinforced soil walls 522
- 17.4.1 Current design methods 522
 - 17.4.2 Tie-back method 524
 - 17.4.2.1 Limit mode 1: sliding 524
 - 17.4.2.2 Limit mode 2: bearing and tilting 524
 - 17.4.2.3 Limit mode 3: reinforcement layer rupture 525
 - 17.4.2.4 Limit mode 4: pull-out capacity 526
 - 17.4.2.5 Limit mode 5: wedge/slip circle stability 526
 - 17.4.2.6 Limit mode 6: deflections 527
 - 17.4.3 Coherent gravity method 528
 - 17.4.3.1 Limit mode 1: sliding 529
 - 17.4.3.2 Limit mode 2: bearing/tilt 529
 - 17.4.3.3 Limit mode 3: element rupture 529
 - 17.4.3.4 Limit mode 4: element pull-out 529
 - 17.4.3.5 Limit mode 5: wedge/slip circle stability 530
 - 17.4.3.5 Limit mode 6: deflections 530
 - 17.4.4 Soil nailing 530
- 17.5 Reinforced slopes 531
- 17.5.1 General 531
 - 17.5.2 Two-part wedge analysis with reinforcement 532
 - 17.5.3 Modified circular slip method 533
 - 17.5.4 Design charts 534
- 17.6 Reinforcement over voids 535
- 17.6.1 Analytical methods 535
 - 17.6.1.1 Tension membrane theory 536
 - 17.6.1.2 Arching 536
 - 17.6.1.3 Combined arching and tension membrane theory 536
 - 17.6.1.4 BS 8006 method 537
 - 17.6.2 Reinforcement on embankment piles 537

IV. SPECIAL TOPICS 539

18. Buried Pipes and Culverts 541

I. D. Moore

- 18.1 Introduction 541
 - 18.1.1 The buried pipe system 541
 - 18.1.2 Pipe types and limit states 541
 - 18.1.3 Analysis of buried pipes 542
 - 18.1.4 Design standards 545
- 18.2 Loads 545
 - 18.2.1 Static loads: embankments 545
 - 18.2.2 Static loads: trench installation 546
 - 18.2.3 Construction loading 548
 - 18.2.4 Surface live loads 548
 - 18.2.5 Fluid loading 548
 - 18.2.6 Other loading sources 548
- 18.3 Response 550
 - 18.3.1 Pipe and soil properties 550
 - 18.3.1.1 Pipe modules and wall properties 550
 - 18.3.1.2 Pipe stiffness 550
 - 18.3.1.3 Soil properties 551
 - 18.3.2 Soil-pipe interaction solutions 551
 - 18.3.3 Positive and negative arching 553
 - 18.3.4 Classification for flexible and rigid pipes 553
 - 18.3.5 Thrust and moment 555
 - 18.3.5.1 General expressions 555
 - 18.3.5.2 Limiting values 555
 - 18.3.5.3 Non-circular pipes and culverts 556
 - 18.3.5.4 Empirical limits 556
 - 18.3.6 Deflection 556
 - 18.3.6.1 Deflection limits 556
 - 18.3.6.2 Deflection resulting from static earth pressures: elastic theory 557
 - 18.3.6.3 Deflection resulting from static earth pressures: limiting values 558
 - 18.3.6.4 Deflection resulting from static earth pressures: Spangler's equation 558
 - 18.3.6.5 Pipe stiffness and flexibility 558
 - 18.3.7 Stress and strain 559
 - 18.3.8 Buckling 559
- 18.4 Backfill selection and pipe installation 560
- 18.5 Design examples 561
 - 18.5.1 Concrete storm sewer 562
 - 18.5.1.1 Structural design to limit crack width 562
 - 18.5.1.2 Indirect design 563
 - 18.5.1.3 Direct design 563
 - 18.5.1.4 Trench versus embankment loading 564
 - 18.5.2 Large diameter corrugated steel culvert 564
 - 18.5.3 High density polyethylene drainage pipe 566

19. Trenchless Technology 569

G. W. E. Milligan and C. D. F. Rogers

- 19.1 Introduction 569
- 19.2 Techniques involving excavation 570
 - 19.2.1 Principles of operation 570
 - 19.2.2 Pipe jacking and microtunneling 570
 - 19.2.3 Auger boring 573

19.2.4	Directional drilling	573
19.2.5	Geotechnical engineering considerations	574
19.2.5.1	Introduction	574
19.2.5.2	Face stability, excavation method and shield thrust force	574
19.2.5.3	Tunnel stability and pipeline friction	576
19.2.5.4	Calculation of ground movements	579
19.2.5.5	Use of lubrication	580
19.2.5.6	Jacking shafts	581
19.2.5.7	Geotechnical considerations for other techniques	581
19.3	Techniques involving ground displacement	582
19.3.1	Principles of operation	582
19.3.2	Moling and guided drilling	582
19.3.3	Pipe bursting	583
19.3.4	Pipe ramming	584
19.3.5	Geotechnical engineering considerations	584
19.3.5.1	Factors influencing void creation	584
19.3.5.2	Void stability and pipeline friction	585
19.3.5.3	Calculation of ground movements	586
19.3.5.4	Influence on the buried infrastructure and adjacent structures and services	588
19.4	Pipeline rehabilitation techniques	588
19.5	Practical application	591
20.	Cold Region Engineering	593
	<i>J.-M. Konrad</i>	
20.1	Introduction	593
20.2	Thermal considerations	593
20.2.1	Heat flow through soils	593
20.2.1.1	Steady state	593
20.2.1.2	Transient state	594
20.2.2	Thermal properties of soils and other materials	595
20.2.2.1	Thermal conductivity	595
20.2.2.2	Heat capacity	595
20.2.2.3	Latent heat	596
20.2.2.4	Thermal resistance	596
20.2.3	Thermal boundary conditions	596
20.2.3.1	Generality	596
20.2.3.2	Freezing and thawing indices at ground surface	598
20.3	Ice formation in freezing soils	600
20.3.1	Unfrozen water content	600
20.3.2	Water migration and ice lens formation	601
20.3.3	Segregation potential of freezing soils for laboratory conditions	602
20.3.4	Segregation potential for field conditions	603
20.3.4.1	SP_{field} from laboratory freezing tests	604
20.3.4.2	SP_{field} from field observations	605
20.3.4.3	SP_{field} from empirical correlations	606
20.3.5	Prediction of frost depth in frost-susceptible soils	606
20.3.6	Frost heave prediction	608
20.3.7	Thaw weakening	609
20.4	Frost susceptibility of soils	609
20.4.1	Limitations of existing frost-susceptibility criteria	609
20.4.2	Rational evaluation of frost susceptibility	610
20.5	Frost action in civil-engineering works	610
20.5.1	Design considerations	610

20.5.2	Foundations	611
20.5.3	Earth retaining structures and excavations	611
20.5.4	Buried structures	611
20.5.5	Highways	612
20.5.5.1	Frost heave	612
20.5.5.2	Thaw-weakening	613
20.5.5.3	Trends in pavement design	613
21.	Earthquake Engineering	615
	<i>W. D. L. Finn</i>	
21.1	Introduction	615
21.2	Seismological aspects	615
21.2.1	Earthquake occurrence	615
21.2.2	Wave type	616
21.2.3	Earthquake magnitude	617
21.2.4	Earthquake statistics	618
21.2.5	Discrete frequency occurrence	618
21.2.6	Earthquake source zones	619

21.13.1	Seismic risk assessment for dams	654
21.13.2	Approaches to risk assessment	654
21.13.3	Some contentious issues	656
21.13.4	Framework for risk assessment	657
21.13.4.1	Example: risk assessment for Keenleyside Dam	657

V. GEOENVIRONMENTAL ENGINEERING 661

22. Geoenvironmental Problem Identification and Risk Management 663

M. Whittaker, J. G. Sprenger and D. D. DuBois

22.1	Introduction	663
22.1.1	Framework for risk-based site management	664
22.1.2	Defining goals	664
22.1.3	Regulatory and societal issues	665
22.2	Site assessment for risk-based site management	667
22.2.1	Scope and objectives	667
22.2.2	Site assessment procedural components	667
22.2.2.1	Stage 1: non-intrusive phase I investigations	667
22.2.2.2	Stage 2: intrusive site assessment	668
22.2.3	Sampling strategies and methods	669
22.2.4	Common difficulties encountered during the site assessment process	670

22.3	Contaminant identification	670
22.3.1	Requirements and objectives	670
22.3.2	Typical contaminants and associated hazards	670
22.3.2.1	Inorganic contamination	670
22.3.2.2	Organic contamination	671
22.3.3	The link between contaminant behavior and risk	671
22.3.3.1	Contaminant partitioning	672
22.3.3.2	Contaminant weathering	672
22.3.4	Selection of analytical parameters	673
22.4	Problem formulation	674
22.4.1	Contaminants	675
22.4.2	Receptors	675
22.4.3	Pathways	675
22.4.4	Conceptual pathway model	679
22.5	Exposure assessment	679
22.5.1	Objectives and link to risk assessment process	679
22.5.2	Basic elements of exposure assessment	680
22.6	Toxicity assessment	681
22.6.1	Objectives and link to risk assessment process	681
22.6.2	Basic elements of toxicity assessment	681
22.6.3	Derivation of exposure limits	682
22.7	Risk characterization	684
22.7.1	Objectives and link to risk assessment process	684
22.7.2	Basic elements of risk characterization	684
22.7.3	Risk description	685
22.7.4	Reporting of uncertainty	685
22.8	Risk communication	686
22.8.1	The need for effective communication	686
22.8.2	External communication	686
22.8.3	Internal communication	686
22.9	Risk management	687
22.9.1	Selection of risk management options	687
22.9.2	Monitoring risk management success	689
22.9.3	Summary	690
23.	Physicochemistry of Soils for Geoenvironmental Engineering	691
	<i>J. K. Mitchell</i>	
23.1	Introduction	691
23.2	Soil mineralogy and composition	691
23.2.1	Mineral compositions and structures	691
23.2.2	Silicate minerals	691
23.2.3	Non-clay minerals in soils	692
23.2.4	Clay mineral structures	692
23.2.5	Clay mineral characteristics	694
23.2.6	Organic matter in soils	694
23.3	Soil water	695
23.3.1	Ice and water structure	695
23.3.2	The influence of dissolved ions	696
23.3.3	Water adsorption by soils	696
23.3.4	Properties of adsorbed water	696
23.4	Clay-water-electrolyte system	697
23.4.1	Ion distributions: the double layer	698
23.4.2	Double layer interactions	699
23.4.3	Factors influencing double layer repulsion	700

- 23.5 Ion exchange 701
- 23.6 Soil fabric and its relation to properties 702
 - 23.6.1 Particle associations and fabric scale 703
 - 23.6.2 Single-grain fabrics 703
 - 23.6.3 Multigrain fabrics 703
 - 23.6.4 Fabric-property interrelationships 704
- 23.7 Physicochemical effects on soil properties and their importance in environmental geotechnics 705
 - 23.7.1 Volume change properties 705
 - 23.7.2 Deformation and strength properties 706
 - 23.7.2.1 Strength 706
 - 23.7.2.2 Stress-strain behavior 707
 - 23.7.2.3 Stress-strain-time behavior 707
 - 23.7.3 Conductivity properties 708
 - 23.7.3.1 Direct flows 708
 - 23.7.3.2 Coupled flows 709
 - 23.7.3.3 Effects of flows on properties 710
- 24. Contaminant Hydrogeology 711
 - R. A. Schincariol and R. K. Rowe*
 - 24.1 Hydrogeological environments 711
 - 24.1.1 Saturated and unsaturated zones 711
 - 24.1.2 Aquifers and aquitards 711
 - 24.1.3 Hydrogeologic parameters: porosity, hydraulic conductivity and permeability, transmissivity, storativity and specific yield 712
 - 24.1.4 Hydrogeologic variables: hydraulic head, flux and velocity, aquifer recharge and discharge 714
 - 24.1.5 Hydrogeologic controls: lithology, stratigraphy and structure 716
 - 24.1.6 Fractured and karst systems: fracture flow 717
 - 24.2 Contaminants and sources 719
 - 24.2.1 Physical and chemical properties of contaminants 719
 - 24.2.2 Hydraulic characteristics of sources 720
 - 24.2.3 Point and non-point sources 720
 - 24.2.4 Loading history 720
 - 24.3 Principles of contaminant transport 721
 - 24.3.1 Mass transport processes: advection, diffusion and dispersion of solutes 721
 - 24.3.1.1 Advection 721
 - 24.3.1.2 Diffusion 721
 - 24.3.1.3 Dispersion 723
 - 24.3.2 Multiphase flow 724
 - 24.3.3 Attenuation of dissolved solutes: biogeochemical processes 729
 - 24.3.3.1 Acid-base reactions 730
 - 24.3.3.2 Solution, volatilization and precipitation reactions 731
 - 24.3.3.3 Sorption 733
 - 24.3.3.4 Oxidation-reduction reactions 736
 - 24.3.3.5 Hydrolysis 737
 - 24.3.3.6 Complexation reactions 737
 - 24.3.4 Facilitated transport of contaminants: cosolvation and colloidal transport 737
- 25. Barrier Systems 739
 - R. K. Rowe*
 - 25.1 Applications, mechanisms and scope 739
 - 25.2 Transmissive layers 739
 - 25.2.1 Hydraulic capacity of drainage layers 741

25.2.2	Particulate clogging of drainage layers	742
25.2.3	Biologically induced clogging of leachate collection systems	743
25.2.4	Geotextile "filters" in leachate collection systems	745
25.2.5	Granular drainage material in leachate collection systems	747
25.2.6	Service life of leachate collection drainage material	748
25.2.7	Leachate collection pipes	750
25.3	Low permeability liners	751
25.3.1	Geological barriers	751
25.3.2	Compacted clay liners (CCLs)	752
25.3.2.1	Material selection	752
25.3.2.2	Compaction water content and density	753
25.3.2.3	Estimating the hydraulic conductivity of CCLs	755
25.3.2.4	Construction of CCLs	756
25.3.2.5	Required thickness of CCLs	758
25.3.2.6	Construction quality control and assurance	759
25.3.3	Soil-bentonite liners	761
25.3.4	Geosynthetic clay liners (GCLs)	762
25.3.4.1	Hydration of GCLs and hydraulic conductivity	762
25.3.4.2	Effect of holes in GCLs	765
25.3.4.3	Desiccation and frost action	765
25.3.5	Hydraulic containment	765
25.3.6	Geomembrane liners	768
25.3.7	Single composite liners	768
25.3.8	Double composite liners	769
25.3.9	Vertical cut-off walls	769
25.3.9.1	Slurry trench walls	769
25.3.9.2	Geomembranes	770
25.3.9.3	Sheet pile walls	770
25.4	Liner compatibility with leachate	771
25.4.1	Clay-permeant interaction	771
25.4.2	GCL-permeant interaction	773
25.4.3	Geomembrane-permeant interaction	774
25.5	Diffusion through barriers	776
25.5.1	Dissolved-phase diffusion through porous media	776
25.5.1.1	Diffusion through intact and compacted clays	777
25.5.1.2	Diffusion through GCLs	778
25.5.1.3	Diffusion through unsaturated soil	780
25.5.2	Gaseous-phase diffusion through porous media	781
25.5.3	Diffusion through geomembranes	782
25.5.3.1	Factors affecting diffusion through a geomembrane	783
25.5.3.2	Diffusion of water through HDPE geomembrane	785
25.6	Liner temperature	785
25.7	Contaminant impact assessment and equivalence of liner systems	787
25.7.1	Impact assessment	787
25.7.2	Equivalence of GCL and CCL systems	787
25.8	Liner stability	788
26.	Geosynthetics in Liquid-containing Structures	789
	<i>J. P. Giroud and R. Bonaparte</i>	
26.1	Introduction	789
26.1.1	Types of liquid-containing structures	789
26.1.2	Uses of geosynthetics in liquid-containing structures	789
26.1.3	Geosynthetic liner systems	789
26.1.4	Design considerations	790

26.2	Design of liquid collection layers	790
26.2.1	Introduction to liquid collection	790
26.2.1.1	Liquid collection	790
26.2.1.2	Characteristics of liquid collection layers	791
26.2.1.3	Materials used in liquid collection layers	791
26.2.1.4	Hydraulic head, depth and thickness of liquid	791
26.2.1.5	Design of liquid collection layers	792
26.2.2	Design of primary liquid collection layers	792
26.2.2.1	Analysis of liquid flow in a primary liquid collection layer	792
26.2.2.2	Design of a primary liquid collection layer	794
26.2.2.3	Average head of liquid on top of the primary liner for liquid migration evaluation	794
26.2.3	Design of secondary liquid collection layers	794
26.2.3.1	Analysis of liquid flow in a secondary liquid collection layer	794
26.2.3.2	Design of a secondary liquid collection layer	795
26.2.3.3	Average head of liquid on top of the secondary liner for liquid migration evaluation	796
26.3	Design of filters	796
26.3.1	Introduction of filtration	796
26.3.1.1	Use of filters in liquid-containment structures	796
26.3.1.2	Types of filters	796
26.3.1.3	Functions of filters	796
26.3.1.4	Importance of intimate contact between filter and soil	797
26.3.1.5	Clogging of filters	797
26.3.2	Relevant characteristics of soils and filters	797
26.3.2.1	Characteristics of soils relevant to filter design	797
26.3.2.2	Characteristics of granular filters	798
26.3.2.3	Characteristics of geotextile filters	798
26.3.3	Design of filters	798
26.3.3.1	Filter criteria	798
26.3.3.2	Permeability criterion	799
26.3.3.3	Retention criterion	800
26.3.3.4	Non-clogging criterion	801
26.4	Liquid migration through liners	801
26.4.1	Introduction to liquid migration through liners	801
26.4.1.1	Types of liners	801
26.4.1.2	The low permeability soil component of a composite liner	801
26.4.1.3	Geomembranes	802
26.4.1.4	Liquid migration evaluation	802
26.4.2	Liquid migration through composite liners	803
26.4.2.1	Ideal case: perfect contact	803
26.4.2.2	Description of liquid migration through a composite liner	803
26.4.2.3	Quality of contact between the two components of a composite liner	803
26.4.2.4	Parameters and units used in equations for liquid migration rate evaluation	804
26.4.2.5	General equations for liquid migration rate	805
26.4.2.6	Equations for liquid migration rate for the case of small hydraulic heads	805
26.4.2.7	Limitations of the equations for liquid migration through composite liners	806
26.4.2.8	Leakage through a wrinkle	806
26.4.3	Geomembrane liner	808
26.4.3.1	Geomembrane overlain and underlain by highly permeable media	808

26.4.3.2	Geomembrane overlain by a permeable medium and underlain by a highly permeable medium	808
26.4.3.3	Geomembrane overlain by a permeable medium and underlain by a semi-permeable medium	809
26.5	Stability and deformations of liner systems	810
26.5.1	Introduction	810
26.5.1.1	Types of mechanical actions applied on liner systems	810
26.5.1.2	Instability of soil or waste in contact with linear system	810
26.5.1.3	Deformation of soil in contact with the liner system	811
26.5.1.4	Differential settlement between the soil supporting the liner system and a structure to which the liner system is connected	811
26.5.1.5	Uplift of liner system by fluids	811
26.5.1.6	Concentrated stresses applied on the geosynthetic component of liner system by the materials in contact	811
26.5.2	Geosynthetic strain due to settlement of the supporting medium	812
26.5.2.1	Relationships between geosynthetic deflection and strain	812
26.5.2.2	Relationships between geosynthetic deflection and tension	813
26.5.2.3	Evaluation of the pressure applied on the geosynthetic	814
26.5.2.4	Use of the equations	814
26.5.3	Differential settlement at connection of liner system to rigid structures	815
26.5.3.1	Tension and strain in the geomembrane	815
26.5.3.2	Assumptions	816
26.5.3.3	Presentation of the method	816
26.5.3.4	Practical recommendations	816
26.5.4	Action of wind on geomembranes	817
26.5.4.1	Introduction	817
26.5.4.2	Suction due to wind	817
26.5.4.3	Resistance to wind uplift due to geomembranes self weight	818
26.5.4.4	Prevention of geomembrane uplift	819
26.5.4.5	Analysis of geomembrane uplift	821
26.5.4.6	Anchorage of a geomembrane subjected to wind uplift	824

27. Covers for Waste 825

R. Bonaparte and E. K. Yanful

27.1	Introduction	825
27.2	Types of cover systems	825
27.2.1	Classification of cover systems	825
27.2.2	Examples of cover systems	828
27.2.3	Gas generation and management	828
27.3	Components of hydraulic-barrier cover systems	831
27.3.1	Typical components	831
27.3.2	Surface layer	831
27.3.3	Protection layer	831
27.3.4	Internal drainage layer	832
27.3.5	Hydraulic-barrier layer	833
