Contents

1	INTRODUCTION	1
2	BASIC PHYSICS	15
	Pulse Testing,	15
	Transmission Line Parameters,	17
	TDR Reflection Type,	22
	Resistive Terminations and the Reflection Coefficient,	22
	Reactive Terminations,	24
	Reactances along Cable,	25
	Rise Time,	26
	Electric Field in Coaxial Cable,	27
	Cable Geometry and Capacitance,	30
	Measurement of Dielectric with Parallel Rods,	32
	Propagation Velocity and Dielectric Constant,	34
	Electric Field Distribution and Sampling Volume around Parallel Rods,	35
	Measurement of Conductivity with Parallel Rods,	38
	Attenuation in Conductive Media,	40
	Attenuation of Multiple Reflections,	43
	Variety of TDR Waveforms,	46
3	MONITORING SOIL MOISTURE	49
	Soil Moisture Terminology,	49
	Probe Design,	51
	Site-Specific Calibration Methods,	54
	Topp's Calibration Equation—the "Yardstick,"	57
	Calibration Coefficients for General Relationships,	58
	Dielectric Properties and Absolute Water Content,	60
	Influence of soil type,	60

- Influence of soil density and shrinkage, 66
- Influence of temperature, 68
- Frequency considerations, 72
- Alternative Soil Moisture Calibration Equations, 75

4 FIELD EXPERIENCE AND VERIFICATION OF SOIL MOISTURE MEASUREMENT 81

- Lysimeter and Bowen Ratio, 81
- Neutron Probe, 82
- Nuclear Density Moisture Gauge, 86
- Applications and Installation Considerations, 87
 - Agriculture-irrigation control, 88
 - Landfill cover performance, 91
 - Infiltration and wetting fronts, 94
 - Soil sampling, 94
 - Road and embankment construction on expansive clay, 96
 - Freeze-thaw behavior of soils, 99
 - Freeze-thaw pavement performance, 102

5 MONITORING LOCALIZED DEFORMATION IN ROCK 107

- General Installation Considerations, 107
 - Reference crimps improve location accuracy, 109
- Interpretation of Reflections, 109
 - Simple shearing, 110
 - Effect of shear zone width, 116
 - Simple extension, 122
 - Combined shear and extension, 124
- Resolution and Attenuation, 127
 - Resolution, 127
 - Attenuation, 129
 - Influence of distance, 132
 - Influence of multiple deformations, 134

- Crimp optimization and resolution, 136
- Noise, 137

6 FIELD EXPERIENCE AND VERIFICATION OF ROCK DEFORMATION MEASUREMENT **139**

- Comparison with Inclinometer, 139
- Comparison with Observation Holes, 144
- Comparison with Elastic Beam Theory, 149
- Installation Details, 152
 - Deep holes, 152
 - Up holes (mine roof), 153
- Applications, 154
 - Continuous Monitoring—strata movement over active mines, 154
 - Multiplexing—strata movement over an abandoned mine, 161
 - Production Well Deformation—*in situ* sulphur mine, 165

7 MONITORING SOIL DEFORMATION **169**

- Localized Shearing Deformation of Soil, 169
- Advantages of TDR Measurement of Localized Shearing in Soil, 170
- Required Grout and Cable Compliance, 174
- Localized vs. General Shear, 178
- Applications, 181
 - Highwall slope and tailings embankment, 181
 - Relative stiffness revisited, 190
 - Landslide monitoring, 194
- Comparative Performance and Costs, 196
- Gravel Pack Alternative, 198
 - Magnitude vs. displacement, 202
 - Low sensitivity of cable with gravel backfill, 204

8 MONITORING STRUCTURAL DEFORMATION 207

MTDR versus OTDR for Structural Monitoring, 207

Internal Structural Deformation—Installation and

Performance, 208

Masonry wall on spread footing, 209

Installation, 210

Performance, 210

Reinforced concrete column, 212

Installation, 212

Performance, 214

External Structural Deformation—Installation, 218

Scour depth measurement during flood, 219

Bridge pier or abutment movement, 221

OTDR and Elastic Structural Deformation, 222

Fiber optic component of a system, 223

OTDR component of a system, 225

Other optical measurement techniques, 227

Measurement of Stress, 227

Candidate fibers, 228

Direct transverse strain and embedded stress

tests, 229

Measurement of Longitudinal Strain, 231

9 AIR-LIQUID INTERFACES 235

Background, 235

TDR Reflection at the Air-Liquid Interface, 236

Correction for the presence of residual water drops, 239

Coaxial cable offers advantages over twisted pair
wire, 241

Applications and Case Histories, 244

Standpipe piezometer, 244

Retrofit of dam piezometer, 245

Water levels above and within an abandoned mine, 248

Water level while drilling, 251

Comparison with Other Technology, 252

- Detection of Leaking Liquids, 259
 - Sensor cable, 260
 - Sensor string components, 260
 - Application of leak detection, 264

10 ELECTRONICS **267**

- Moisture Probes and Transmission Line Transformers, 267
- Properties of Coaxial Cables, 271
- Transducer Cables, 271
- Baluns or Transmission Line Transformers, 278
- Connectors, 280
- Low Loss Lead Cable, 281
- Multiplexer, 282
- Pulser/Sampler, 282
- Memory, 287
- Viewing TDR Waveforms, 289
- Packaged Systems for Soil Moisture, 289
- Computer Control or Serial Communication, 290
- Telemetry/Cellular Data Acquisition, 291
- Modem/Phone Line Data Acquisition, 294
- Battery Power for Remote Monitoring, 294
 - Case history—dam monitoring, 295
- Detailed Examples, 297
 - Rock deformation, 297
 - Soil moisture, 297
- Pending Developments, 300

11 SOFTWARE **301**

- General Control/Acquisition Software, 301
 - SP232—Laptop Computer Control, 301
 - Acquisition settings, 306
 - Remote use, 308
 - CSI PC208—Datalogger Control and Multiplexing, 310
 - Acquisition parameters, 310

Example interrogation of multiple transducer cables, 312

Specialized Software, 314

 Soil Moisture—Acquire and Interpret Waveforms, 314

 Parallel rod probes: WinTDR and PYELAB, 314

 Segmented probes: ViewPoint, 316

 Diode switching control, 317

 Types of scans, 319

 Deformation—Analyze Changes in Raw Waveforms, 319

 NUTSA, 320

 Waveform data formats, 321

 Creation of scratch files and concatenation of datablocks, 323

 Identification of waveform changes, 323

 Quantifying waveform changes, 326

 Storing waveforms as ASCII files, 329

 Requirements and limitations, 331
