Contents

Chapter 1: Cavitation.....	1
What is Cavitation?	
How is Cavitation Damage Repaired?	
Leading Edge Cavitation Damage in Conventional Turbines (Zone I)	
Trailing Edge Cavitation Damage in Conventional Turbines (Zone II)	
Leading Edge Cavitation Damage in Conventional Pumps	
Inner-Diameter Edge Cavitation Damage in Pump-Turbines	
Alternate Methods for Reducing Cavitation Damage during Pumping	
Chapter 2: Fractures.....	23
Why Do Hydroturbine Wheels Crack?	
When Should Cracks Be Repaired?	
How Can the Cause of Cracking Be Identified?	
How Sould Cracks Be Repaired?	
Can Future Cracking Be Prevented?	
Chapter 3: Wheel Inspection Procedures.....	37
How to Perform a Water Wheel Inspection	
Post Welding Inspections	
Summary of Procedures	
Chapter 4: Coatings	45
The Need for Coatings	
Corrosion Prevention	
Cavitation Assessment	
Cavitation Prevention	
Maintenance Research	
Chapter 5: Lubrication Systems	53
Introduction	
Wicket Gate Lubrication Systems	
General Plant and Unit Oil Systems	
Inspecting and Testing of Lubrication Systems	
Maintaining the Lubricating Oil	
Filters	
Guide and Thrust Bearings	

Chapter 6: How to Enhance Your Maintenance Programs65

- Overview
- Predictive Maintenance
- Adding Predictive Maintenance to Hydro

Chapter 7: New and Upgraded Hydro Turbines71

- Design and Specification Tips
- Selecting Materials
- Runners
- Wicket Gates and Operating Mechanisms
- Shaft Seals

Appendices85

- Appendix 1: Troubleshooting Procedures
- Appendix 2: Tools, Filler Material, Gas Cover
- Appendix 3: Turbine Wheel Seal Ring Rebuild: A Case Study
- Appendix 4: Cavitation Repair on a Francis Turbine: A Case Study
- Appendix 5: Cavitation Repair on a Francis Turbine: A Case Study
- Appendix 6: Inspection Analysis
