	Page
Preface	
<b>1. Introduction</b>	<b>1</b>
1.1. Importance of inlet conditions	1
1.2. Cavitation	1
1.3. Effects of inadequate suction conditions	2
<b>2. The concept of NPSH</b>	<b>5</b>
2.1. Pressure profile along the streamline	5
2.2. Definition of NPSH	5
2.3. Practical definition of NPSHR	8
2.4. Other qualifying criteria for NPSH	10
<b>3. Governing parameters</b>	<b>13</b>
3.1. Effect of speed and capacity	13
3.2. Effect of pump geometry	14
3.3. Effect of impeller trim	15
3.4. Effect of pumped liquid	16
3.5. Effect of inlet piping	17
3.6. Effect of pump material	18
<b>4. Suction specific speed</b>	<b>21</b>
<b>5. Safety margins between NPSHR and NPSHA</b>	<b>25</b>
<b>6. Practical determination of NPSHR</b>	<b>31</b>

<b>7. Determination of NPSHA</b>	<b>33</b>
7.1. Atmospheric pressure	34
7.2. Reference level	35
7.3. Temperature and vapour pressure	36
7.4. Velocity head	36
7.5. Measurements from Bourdon gauges	36
7.6. Conversion from pressure to head	37
<b>8. Examples of calculation of NPSHA</b>	<b>39</b>
8.1. Pump under positive head and liquid under atmospheric pressure	39
8.2. Pumps under negative head and liquid under atmospheric pressure	40
8.3. Liquid level under positive pressure and pump below the liquid level	41
8.4. Liquid level under positive pressure and pump above the liquid level	42
8.5. Liquid level under negative pressure and pump below the liquid level	42
8.6. Liquid level under negative pressure and pump above the liquid level	44
8.7. Liquid level under the vapour pressure of the liquid	45
<b>9. Other phenomena</b>	<b>47</b>
9.1. Suction recirculation	47
9.2. Corrosion	48
9.3. Submergence under a free surface	48
9.4. Air or gas entrainment	49
9.5. Dissolved gases	50
<b>10. Conclusions</b>	<b>51</b>
<b>11. Terms, symbols and units</b>	<b>53</b>
<b>Appendices</b>	
Appendix A	57
Appendix B	59
Appendix C	63
Appendix D	67
Appendix E	71
