

Piling Engineering

SECOND EDITION

W.G.K. FLEMING, BSc, PhD, MICE
Chief Engineer
Cementation Piling and Foundations Ltd
Rickmansworth

A.J. WELTMAN, MSc, DIC, MIMM, FGS
Consulting Geotechnical Engineer
Stroud

M.F. RANDOLPH, MA, PhD
Professor of Civil Engineering
University of Western Australia

W.K. ELSON, Dip. CE, PhD, MICE
Senior Lecturer in Civil Engineering
Brighton Polytechnic

Contents

<i>List of symbols</i>	ix
1 Introduction	1
2 Site investigation for piling	8
2.1 Planning	8
2.2 Depth of exploration	9
2.3 Groundwater conditions	11
2.4 Sampling, in-situ testing and laboratory testing	13
2.5 Methods of exploration for various soil types	14
2.5.1 Stiff fissured clays	14
2.5.2 Cohesive glacial till	17
2.5.3 Fine-grained granular deposits	20
2.5.4 Medium- and coarse-grained granular deposits	22
2.5.5 Normally consolidated clays	25
2.5.6 Weak rocks	26
2.6 Backfilling site investigation boreholes	27
3 Basic piling methods	28
3.1 Pile types	28
3.2 Displacement piles	29
3.2.1 Totally preformed displacement piles	29
3.2.2 Precast reinforced concrete piles	31
3.2.3 Jointed piles	31
3.2.4 Shoes for concrete piles	32
3.2.5 Hollow tubular-section concrete piles (cylinder piles)	34
3.2.6 Preformed steel piles	34
3.2.7 Timber piles	38
3.2.8 Driven cast-in-place displacement piles	40
3.2.9 Helical (screw) cast-in-place displacement piles	43
3.3 Methods of pile driving	45
3.3.1 Drop hammers	45
3.3.2 Pile driving by diesel hammer	52
3.3.3 Vibratory methods of pile driving	53
3.3.4 Jacking methods of pile installation	54
3.4 Non-displacement piles	54
3.4.1 Bored cast-in-place piles	55
3.4.2 Small-diameter percussion bored cast-in-place piles	55
3.4.3 Large-diameter percussion bored piles	57
3.4.4 Rotary bored cast-in-place piles	61
3.4.5 Boring and concreting	70

3.4.6	Concrete mixes for bored piles	72
3.4.7	Reinforcement for bored piles	73
3.4.8	Excavation using a bentonite suspension	73
3.4.9	Diaphragm piers (barettes)	75
3.5	Continuous-flight augered piles with grout or concrete intrusion	75
3.6	Micro piles	78
3.6.1	Uses of micro piles	78
3.6.2	Installation methods	81
3.6.3	Sizes of micro piles and load capacities	84
3.6.4	Special considerations relating to micro piles	84
3.7	Corrosion	85
3.7.1	Corrosion of steel piles	85
3.7.2	Attack on concrete piles	87
3.7.3	Sulphate attack	87
3.7.4	Chloride attack	88
3.7.5	Acidic groundwater	89
3.7.6	Miscellaneous aggressive agencies	89
3.7.7	Protection of concrete piles	89
4	Design of single piles	92
4.1	Axial capacity of piles	92
4.1.1	Capacity in non-cohesive soils	95
4.1.2	Capacity in cohesive soils	104
4.1.3	Capacity of piles in rock	112
4.1.4	Driving formulae and dynamic estimates of pile capacity	115
4.1.5	Increase in capacity of piles with time	118
4.2	Axial deformation of piles	122
4.2.1	Basic solution for a rigid pile	123
4.2.2	Pile compression	127
4.2.3	Layered soil profiles	132
4.2.4	Behaviour of long slender piles	134
4.2.5	Rock sockets	139
4.3	Lateral capacity of piles	140
4.3.1	Limiting lateral pressures in non-cohesive soils	144
4.3.2	Limiting lateral pressures in cohesive soils	146
4.4	Deformation of single piles under lateral loading	152
4.4.1	Subgrade reaction approach	152
4.4.2	Elastic continuum approach	154
4.4.3	Cantilever idealization	161
4.4.4	Layered soil profiles	162
4.4.5	Raking piles and effect of lateral load on axial capacity	163
4.5	Piles in deforming soil	166
4.5.1	Negative friction	167
4.5.2	Lateral movement of soil	171
4.6	Buckling of piles	175
4.6.1	Instability during driving	175
4.6.2	Buckling under static loading	177
5	Design of pile groups	179
5.1	Capacity of pile groups	180
5.1.1	Axial capacity	182
5.1.2	Lateral capacity	185
5.2	Deformation of pile groups	187
5.2.1	Axial loading	188

5.2.2	Lateral loading	197
5.2.3	Computer programs for pile group analysis	199
5.2.4	Elastic properties of soil	202
5.3	Piled rafts	205
5.4	Discussion	211
5.4.1	Factors of safety	212
5.4.2	Use of raking piles	213
6	Retaining walls	215
6.1	General	215
6.2	Soils and the data needed for wall design	218
6.2.1	Wall friction and adhesion	222
6.2.2	Sensitivity analysis	224
6.3	The basic design principles for bored pile or diaphragm walls	224
6.4	The treatment of groundwater conditions	228
6.4.1	Tension cracks	232
6.5	Earth pressures due to ground surcharges	232
6.5.1	Uniform surcharges	232
6.5.2	Point loads and line loads	232
6.6	The use of berms	235
6.7	Wall stability analysis	236
6.7.1	Walls with two or more props or ties	239
6.8	Structural wall design	241
6.8.1	General considerations	241
6.8.2	Determination of bending moments and shear forces in a cantilever wall	242
6.8.3	Determination of bending moments and shear forces in tied or propped walls	243
6.9	Retaining wall deflection and associated soil movements	244
6.10	Measurement of the deflection of retaining walls	249
7	Problems in pile construction	251
7.1	Driven piles	251
7.1.1	Design and manufacture	251
7.1.2	Installation of driven piles	252
7.1.3	Associated ground movements	257
7.1.4	Noise and ground vibration	258
7.2	Bored piles	261
7.2.1	Excavation of the pile bore	261
7.2.2	Concreting the pile	266
7.2.3	Design of pile reinforcement	275
7.2.4	Piles constructed with the aid of drilling mud	276
7.3	Driven cast-in-place piles	278
7.4	Continuous-flight auger piles	278
7.5	General comments and conclusions	280
8	Integrity testing	282
8.1	Introduction	282
8.1.1	Occurrence of faults in piles	283
8.2	Types of integrity test	283
8.2.1	Acoustic tests	284
8.2.2	Radiometric tests	288
8.2.3	Seismic test methods (sonic echo method)	289
8.2.4	Stress wave tests	291

8.2.5	Dynamic response tests	291
8.2.6	Electrical testing methods	294
8.3	Summary of methods	300
9	Pile testing	301
9.1	Introduction	301
9.2	Load testing of piles	303
9.2.1	General comments	303
9.2.2	Test equipment	305
9.2.3	Pile load test procedures	320
9.2.4	Interpretation of the results	323
9.2.5	Special pile instrumentation	328
9.2.6	Other pile tests	333
9.3	Dynamic testing of piles	335
9.3.1	Wave equation analysis	336
9.3.2	Dynamic stress wave data	342
9.3.3	General comments	346
9.4	Safety aspects of pile testing	348
10	Choice of piling method and economics of design	351
10.1	General	351
10.2	Limitations on method choice imposed by ground conditions	353
10.3	Structural consideration of pile use	354
10.3.1	The use of piles for vertical load bearing	355
10.3.2	The use of piles for lateral load bearing	358
10.3.3	Tolerances in the installation of piles and their structural effects	360
10.4	Constructional consideration of pile use	362
10.4.1	Site access	362
10.4.2	Contract size	364
10.4.3	Limitations on various types of piling equipment	364
10.4.4	Production	367
10.4.5	Environmental factors	368
10.5	Cost considerations	370
