

Losses in Water Distribution Networks

*A Practitioner's Guide to Assessment, Monitoring
and Control*

Malcolm Farley and Stuart Trow

Contents

<i>Preface</i>	<i>ix</i>
<i>The authors</i>	<i>xi</i>
<i>Acknowledgements</i>	<i>xiii</i>
1 Introduction	1
1.1 Understanding the network	1
1.2 A strategy for water loss	2
2 Assessing losses	6
2.1 Defining water loss and leakage	6
2.2 Comparisons of water losses	8
2.3 Experience of the UK water industry	8
2.4 Water balance – UK methodology	10
2.5 The IWA international standard	10
2.6 An example water balance calculation	18
2.7 Measuring or estimating the components of water balance	20
2.8 Techniques for reviewing the network operating practices	24
2.9 Techniques for quantifying leakage	25
3 International comparisons	35
3.1 Performance indicators and target setting	35
3.2 The IWA performance measures structure	36
3.3 Non-revenue water: financial performance indicators	36
3.4 Apparent losses	39
3.5 Real losses	39
3.6 Performance indicators in England and Wales	45

4	Developing a strategy	48
4.1	Introduction	48
4.2	Economics of water loss	50
4.3	Economic level of leakage	54
4.4	Setting targets for leakage	59
4.5	The impact of regulation on the water industry	61
4.6	A practical approach	62
4.7	Computer models to assess losses	70
4.8	Designing and introducing a strategy	78
5	Upgrading the network	82
5.1	Introduction	82
5.2	The zoning concept	82
5.3	Flow metering	84
5.4	Zonal metering	86
5.5	Network records and recording systems	90
5.6	Surveying the network	91
5.7	Pilot study areas	92
5.8	Mains renewal and rehabilitation to reduce leakage	95
6	Leakage monitoring and control	100
6.1	Criteria and choice of methodology	100
6.2	Sectorisation and zonal monitoring	102
6.3	Leak detection and location in DMAs	109
6.4	Leak detection policies and procedures	122
6.5	Choice of leak detection technique	124
6.6	Types of contract	130
6.7	Management of leakage detection operations	134
6.8	Repair techniques	137
6.9	Leak detection in networks with intermittent supply	140
7	Pressure management	145
7.1	Introduction	145
7.2	Benefits of pressure management	146
7.3	Potential problems	151
7.4	The relative importance of pressure management	151
7.5	Pressure/leakage relationships	152
7.6	Economics and cost-benefit analysis	155
7.7	Policy issues	158
7.8	Design of pressure management schemes	160

7.9	Operation of PRVs	165
7.10	Flow modulation	171
7.11	Factors restricting the scope for pressure reduction	173
7.12	Cavitation	174
7.13	PRV installation	176
7.14	Predicting a pressure-managed regime	179
7.15	Hour to day factors	180
8	Changing policies	183
8.1	Customer demand	184
8.2	Options for meeting increasing demand	185
8.3	Demand management policies	187
8.4	Customer metering	192
8.5	Case studies	193
9	Ensuring sustainability	206
9.1	Staffing levels	207
9.2	Education and training	209
9.3	Operation and maintenance	214
9.4	Assessing and monitoring performance	216
	Case study 1: An evaluation of the water distribution system for system losses in Sarina Shire Council, Australia	221
	Case study 2: Leakage control in southern Europe (Italy)	233
	Case Study 3: Leakage control and non-revenue water analysis – Water Works Corporation, Malta	241
	Appendix A: Potential savings from leakage management	254
	Appendix B: Meter installation design and schedule of materials for a zone/DMA meter	257
	Appendix C: Network records	259
	Appendix D: Conducting a water use audit	265
	Appendix E: Example training programmes	270
	Index	273
