# Geotechnical Engineering Handbook

Volume 1: Fundamentals

Editor:
Ulrich Smoltczyk

UNIVERSITA' D. STUDI DI TRENTO * BIBLIOTECA

Ernst & Sohn
A Wiley Company

# Contents

**1.1 International agreements**

*Ulrich Smoltczyk and Christophe Bauduin*

1 Classification of geotechnical literature . . . . . 1
2 Symbols . . . . . 3
3 International rules for foundation engineering . . . . . 4
4 Basic terms by EN 1990 and EN 1997 . . . . . 6
4.1 Classification of assessments in Eurocodes (EN 1990, 1.4; EN 1997-1, 1.3) . 6
4.2 Limit states (EN 1990) . . . . . 6
4.3 Design situations (EN 1990, 3.5) . . . . . 7
4.4 Geotechnical categories (EN 1997-1, 2.1) . . . . . 7
4.5 Observational method (EN 1997, 2.7) . . . . . 7
4.6 Partial safety factor method . . . . . 8
5 Geotechnical report . . . . . 12
5.1 Ground investigation report (EN 1997-1, 3.4) . . . . . 13
5.2 Ground design report (EN 1997-1, 2.8) . . . . . 14
6 References . . . . . 16

**1.2 Determination of characteristic values**

*Christophe Bauduin*

1 Introduction . . . . . 17
2 From derived value to design value . . . . . 17
2.1 Sequential steps . . . . . 17
2.2 Points of view when analyzing test results . . . . . 19
2.3 Points of view when determining characteristic values of ground parameters (EN 1997-1, 2.4.5) . . . . . 25
2.4 Use of statistical methods . . . . . 28
3 Examples . . . . . 37
3.1 Local sampling . . . . . 37
3.2 Local sampling with V well-known . . . . . 38
3.3 Soil property increasing linearily with depth . . . . . 39
3.4 Analysis of shear tests . . . . . 41
3.5 Example: Boulder clay . . . . . 45
4 References . . . . . 49

## 1.3 Geotechnical field investigations

*Klaus-Jürgen Melzer and Ulf Bergdahl*

1 Basics ... 51
1.1 Standards ... 51
1.2 Preliminary investigations ... 52
1.3 Design investigations ... 53
2 Ground investigation by excavation, drilling and sampling ... 53
2.1 General ... 53
2.2 Investigation of soils ... 56
2.3 Investigation of rocks ... 62
2.4 Obtaining special samples ... 67
2.5 Investigation of groundwater conditions ... 68
3 Ground investigation by penetration testing ... 71
3.1 General ... 71
3.2 Dynamic probing ... 73
3.3 Standard penetration test ... 77
3.4 Cone penetration test ... 82
3.5 Field vane test ... 90
3.6 Weight sounding test ... 93
4 Lateral pressure tests in boreholes ... 96
4.1 Equipment and test procedures ... 96
4.2 Evaluation ... 102
5 Determination of density ... 106
5.1 Sampling methods ... 106
5.2 Radiometric methods ... 107
6 Geophysical methods ... 109
6.1 General ... 109
6.2 Brief descriptions of some methods ... 110
7 References ... 111
8 Standards ... 116

## 1.4 Properties of soils and rocks and their laboratory determination

*Paul von Soos and Jan Boháč*

1 Soils and rocks – origins and basic terms ... 119
2 Properties of soils ... 119
2.1 Soil layers ... 119
2.2 Soil samples ... 120
2.3 Laboratory investigation – performing and evaluating ... 120
2.4 Soil properties and laboratory testing ... 121
3 Properties of rocks ... 126
4 Characteristics and properties of solid soil particles ... 126
4.1 Particle size distribution ... 126
4.2 Density of solid particles ... 129
4.3 Mineralogical composition of soils ... 130
4.4 Shape and roughness of particles ... 132
4.5 Specific surface ... 132

4.6 Organic content . . . 133
4.7 Carbonate content . . . 134
5 Characteristics and properties of soil aggregates . . . 134
5.1 Fabric of soils . . . 134
5.2 Porosity and voids ratio . . . 135
5.3 Density . . . 138
5.4 Relative density . . . 138
5.5 Water content . . . 140
5.6 Limits of consistency – Atterberg limits . . . 140
5.7 Water adsorption . . . 144
5.8 Compaction; moisture – density relations . . . 145
5.9 Size of voids; filters . . . 146
5.10 Capillarity . . . 147
5.11 Water permeability . . . 150
5.12 Air permeability . . . 152
6 Stress-strain behaviour . . . 153
6.1 General considerations . . . 153
6.2 One-dimensional compression and consolidation (oedometer) test . . . 157
6.3 Triaxial compression test . . . 164
6.4 Unconfined compression test . . . 168
6.5 Tests with the general state of stress – true triaxial test and biaxial test . . . 168
6.6 Measurement of time dependent deformation . . . 169
7 Determination of shear strength parameters . . . 171
7.1 General aspects of strength testing . . . 171
7.2 Triaxial compression test . . . 176
7.3 Determination of unconfined compressive strength and sensitivity . . . 179
7.4 Shear box test . . . 180
8 Determination of tensile strength . . . 182
9 Determination of slake durability of rock . . . 183
10 Correlations . . . 183
10.1 Proctor density and optimum water content of fine-grained soils . . . 183
10.2 Water permeability . . . 184
10.3 Stress-strain relations for soils . . . 185
10.4 Parameters of shear strength . . . 187
11 Classification . . . 189
11.1 Soil classification . . . 189
11.2 Rock classification . . . 197
12 References . . . 200

**1.5 Constitutive laws for soils from a physical viewpoint**

*Gerd Gudehus*

1 Introduction . . . 207
1.1 Motive and objective . . . 207
1.2 Contents . . . 208
2 States and changes of state . . . 210
2.1 States . . . 210
2.2 Changes of state . . . 220

2.3 Special sequences of state and stability ... 227
3 Stress-strain relations ... 237
3.1 Finite constitutive laws ... 237
3.2 Elastoplasticity ... 241
3.3 Hypoplasticity ... 248
4 Further constitutive laws ... 253
4.1 Physico-chemical and granulometric changes ... 253
4.2 Transport laws ... 254
4.3 Granular interfaces ... 254
5 References ... 256

**1.6 Calculation of stress and settlement in soil masses**

*Harry Poulos*

1 Introduction ... 259
2 Basic relationships from the theory of elasticity ... 260
2.1 Definitions and sign convention ... 260
2.2 Principal stresses ... 260
2.3 Maximum shear stress ... 261
2.4 Octahedral stresses ... 261
2.5 Two-dimensional stress systems ... 262
2.6 Analysis of strain ... 263
2.7 Elastic stress-strain relationships for an isotropic material ... 265
2.8 Summary of relationships between elastic parameters ... 266
3 Principles of settlement analysis ... 267
3.1 Components of settlement ... 267
3.2 Application of elastic theory to settlement calculation ... 267
3.3 Allowance for effects of local soil yield on immediate settlement ... 269
3.4 Estimation of creep settlement ... 269
3.5 Methods of assessing soil parameters ... 270
4 Solutions for stresses in an elastic mass ... 272
4.1 Introduction ... 272
4.2 Kelvin problem ... 272
4.3 Boussinesq problem ... 273
4.4 Cerruti's problem ... 273
4.5 Mindlin's problem no. 1 ... 274
4.6 Mindlin's problem no. 2 ... 276
4.7 Point load on finite layer ... 278
4.8 Finite line load acting within an infinite solid ... 278
4.9 Finite vertical line load on the surface of a semi-infinite mass ... 279
4.10 Horizontal line load acting on the surface of a semi-infinite mass ... 279
4.11 Melan's problem I ... 280
4.12 Melan's problem II ... 281
4.13 Uniform vertical loading on a strip ... 281
4.14 Vertical loading increasing linearly ... 281
4.15 Symmetrical vertical triangular loading ... 282
4.16 Uniform vertical loading on circular area ... 283

4.17 Uniform vertical loading on a rectangular area ... 284
4.18 Other cases ... 285
5 Solutions for the settlement of shallow footings ... 285
5.1 Uniformly loaded strip footing on a homogeneous elastic layer ... 285
5.2 Uniformly loaded circular footing on a layer ... 285
5.3 Uniformly loaded rectangular footing on a layer ... 287
6 Rate of settlement of shallow footings ... 289
6.1 One dimensional analysis ... 289
6.2 Effect of non-linear consolidation ... 291
6.3 Consolidation with vertical drains ... 291
6.4 Two- and three-dimensional consolidation ... 293
6.5 Simplified analysis using an equivalent coefficient of consolidation ... 293
7 Solutions for the settlement of strip and raft foundations ... 297
7.1 Point load on a strip foundation ... 297
7.2 Uniform loading on a strip foundation ... 297
7.3 Uniform loading on a circular raft ... 299
7.4 Uniform loading on a rectangular raft ... 301
7.5 Concentrated loading on a semi-infinite raft ... 303
8 Solutions for the settlement of pile foundations ... 305
8.1 Single piles ... 305
8.2 Pile groups ... 309
9 References ... 310

**1.7 Treatment of geotechnical ultimate limit states by the theory of plasticity**
*Roberto Nova*

1 Fundamentals of ultimate limit states ... 313
1.1 Introduction ... 313
1.2 Definitions ... 314
1.3 Fundamental theorems for standard materials ... 317
2 Limit analysis of shallow foundations on a purely cohesive soil ... 319
2.1 Introduction ... 319
2.2 Lower bound analysis ... 320
2.3 Upper bound analysis ... 321
2.4 Refined lower bound analysis: method of characteristics ... 322
2.5 Refined upper bound: slip lines ... 325
2.6 Strip footing ... 326
2.7 Circular footings ... 328
3 Limit analysis for non-standard materials ... 329
3.1 Introduction ... 329
3.2 Fundamental theorems for non-standard materials ... 329
4 Further limitations of limit analysis – slope stability ... 332
4.1 Introduction ... 332
4.2 Simple lower bound analysis ... 333
4.3 Simple upper bound analysis ... 333
4.4 Improvement of bound estimates ... 334
4.5 Actual critical height of a vertical cut ... 335
5 Elastoplastic analysis of shallow foundations ... 336

5.1 Introduction ... 336
5.2 Fundamental experimental findings ... 337
5.3 Behaviour in unloading–reloading ... 338
5.4 Permanent displacements and rotations ... 339
5.5 Parameter determination ... 341
5.6 Comparison with experimental data ... 342
5.7 An application to the settlement of the Pisa bell-tower ... 345
6 References ... 351

**1.8 Soil dynamics and earthquakes**
*Günter Klein and Frank Sperling*

1 Introduction ... 353
2 Basic mechanical considerations ... 354
2.1 Time dependent processes ... 354
2.2 Basics of technical vibration systems ... 357
3 Dynamics of foundation structures ... 363
3.1 Vibration excitation ... 363
3.2 Model systems for foundation structures ... 368
3.3 Fundamentals of the half-space theory ... 375
4 Dynamics of subsoil ... 378
4.1 Dynamical properties of soils ... 378
4.2 Characteristic parameters of dynamic soil properties ... 380
4.3 Design parameters for rigid foundations ... 382
4.4 Shock protection and vibration isolation ... 384
5 Dynamics of earthquakes ... 388
5.1 Basic seismological concepts ... 388
5.2 Design methods for buildings ... 393
5.3 Effect of earthquakes on foundation engineering ... 398
6 Literature ... 403
7 References ... 404

**1.9 Earth pressure determination**
*Gerd Gudehus*

1 Introduction ... 407
1.1 Objectives ... 407
1.2 Selection and organization of material in the paper ... 408
2 Limit states without pore water ... 408
2.1 Plane slip surface ... 408
2.2 Curved slip surfaces and combined mechanisms ... 412
2.3 Three-dimensional effects ... 418
3 Limit states with pore water ... 421
3.1 Air-impervious soils ... 421
3.2 Air-pervious soils ... 426
4 Deformation-dependent earth pressures ... 428
4.1 Granular soils ... 428
4.2 Clayey and organic soils ... 431
5 References ... 435

## 1.10 Numerical methods

*Peter Gussmann, Hermann Schad, Ian Smith*

| | | |
|---|---|---|
| 1 | General methods | 437 |
| 1.1 | Difference procedures | 437 |
| 1.2 | Integral equations and the boundary element method | 440 |
| 2 | Basics of the finite element method (FEM) | 441 |
| 2.1 | Matrices of elements and structures | 442 |
| 2.2 | Calculation techniques for non-linear problems | 448 |
| 3 | The application of FEM in geotechnics | 452 |
| 3.1 | Static problems | 452 |
| 3.2 | Time dependent problems | 455 |
| 4 | The kinematical element method (KEM) and other limit load methods | 460 |
| 4.1 | Basics | 460 |
| 4.2 | A static approach: the method of characteristics from *Sokolovski* | 461 |
| 4.3 | Kinematical methods: KEM | 462 |
| 4.4 | Slice methods | 471 |
| 4.5 | Application to bearing capacity of footings: comparison investigations | 474 |
| 4.6 | Design formulas and design tables or charts for standard slopes | 477 |
| 5 | References | 477 |

## 1.11 Metrological monitoring of slopes, embankments and retaining walls

*Klaus Linkwitz and Willfried Schwarz*

| | | |
|---|---|---|
| 1 | Task and objective | 481 |
| 2 | About the practical organisation, solution and carrying out of the task | 482 |
| 2.1 | Conceptual design and exploration of the measurements | 483 |
| 2.2 | Selection of the points and monumentation | 483 |
| 2.3 | Observations | 484 |
| 2.4 | Evaluations | 484 |
| 2.5 | Interpretation | 484 |
| 3 | Geodetic methods of monitoring measurements | 485 |
| 3.1 | Alignments | 486 |
| 3.2 | Polygonal traverses | 491 |
| 3.3 | Trigonometrical determination of individual points; nets | 500 |
| 3.4 | Automated methods | 512 |
| 3.5 | Inclination measurements | 519 |
| 4 | Photogrammetrical methods of monitoring measurements | 526 |
| 4.1 | Methodology and procedures | 526 |
| 4.2 | Aerial photogrammetry | 527 |
| 4.3 | Terrestrial photogrammetry | 532 |
| 4.4 | Digital photogrammetry | 533 |
| 5 | Satellite supported methods | 535 |
| 5.1 | System structure of GPS | 536 |
| 5.2 | Procedures for absolute positioning | 540 |
| 5.3 | Procedures for relative positioning | 542 |
| 5.4 | Monitoring measurements with satellite supported procedures | 545 |

6 Evaluation and analysis of the measurements . . . . . 546
6.1 Geodetic analysis and interpretation . . . . . 546
6.2 Structural-physical analysis and interpretation . . . . . 548
6.3 Integral analysis and interpretation . . . . . 549
7 References . . . . . 551

## 1.12 Geotechnical measurement procedures

*Arno Thut*

1 Introduction . . . . . 561
2 Objectives of geotechnical measurements . . . . . 561
3 Measured parameters . . . . . 563
3.1 Parameters in the foundation soil . . . . . 563
3.2 Parameters during construction . . . . . 564
3.3 Parameters in the supporting structure . . . . . 564
3.4 Parameters at adjacent structures . . . . . 565
3.5 Parameters for permanent structures . . . . . 565
3.6 Parameters for the rehabilitation of buildings . . . . . 566
4 Measuring instruments, installation and costs . . . . . 566
4.1 Geodetical measurements . . . . . 566
4.2 Geotechnical measurements . . . . . 567
5 Execution of the measurements, reporting . . . . . 587
5.1 Manual measurements . . . . . 589
5.2 Automatic measuring systems . . . . . 589
5.3 Data visualisation software . . . . . 590
6 Case histories . . . . . 590
6.1 Deep excavations, adjacent structures . . . . . 590
6.2 Test embankment load, observational method . . . . . 601
6.3 Adler Tunnel – readjustment of a structure . . . . . 603
6.4 Monitoring of unstable slopes . . . . . 607
6.5 Test loading of supporting structure, pile tests, displacement measurements in pile foundation . . . . . 611
7 References . . . . . 615

## 1.13 Phenomenology of natural slopes and their mass movement

*Edmund Krauter*

1 Definitions . . . . . 617
2 Introduction . . . . . 617
3 Slope shapes . . . . . 618
4 Mass movement of slopes . . . . . 621
4.1 Causes, factors . . . . . 626
4.2 Classification, types . . . . . 638
4.3 Shapes of sliding surfaces and failure mechanisms . . . . . 651
4.4 Sequences of movements and hazard assessment . . . . . 654
4.5 Identification and investigation . . . . . 662
5 References . . . . . 664

## 1.14 Ice loading actions

*Martin Hager*

| | | |
|---|---|---|
| 1 | Preliminary remarks | 669 |
| 2 | Types of ice loads and ice-structure interactions | 669 |
| 3 | Properties of ice | 670 |
| 3.1 | Mass density of ice | 670 |
| 3.2 | Elasticity of ice | 671 |
| 3.3 | Thermal expansion of ice | 671 |
| 3.4 | Strength of ice | 672 |
| 4 | Definitive values of the ice strength for calculation | 674 |
| 5 | Thickness of ice | 676 |
| 6 | Calculation of the ice loads | 677 |
| 6.1 | Ice loads on wide structures | 677 |
| 6.2 | Ice loads on narrow slender structures | 678 |
| 6.3 | Thermal ice pressure loads | 682 |
| 6.4 | Additional vertical ice loads | 683 |
| 6.5 | Ice loads on groups of structures | 683 |
| 6.6 | Ice loads under special climatic and ice conditions | 684 |
| 7 | References | 685 |

## 1.15 Stability of rock slopes

*Walter Wittke and Claus Erichsen*

| | | |
|---|---|---|
| 1 | Introduction | 687 |
| 2 | Structural models of rock mass | 688 |
| 3 | Mechanisms of failure of rock slopes | 693 |
| 4 | Model for the stress-strain behaviour of rock | 696 |
| 4.1 | General | 696 |
| 4.2 | Intact rock | 698 |
| 4.3 | Discontinuities | 698 |
| 4.4 | Rock mass | 701 |
| 4.5 | Model for the mechanical behaviour of a rock mass with respect to a refined stress displacement behaviour of persistent discontinuities with no fillings | 705 |
| 5 | Model for seepage flow through a rock mass | 707 |
| 6 | Stability investigations according to the finite element method | 712 |
| 6.1 | General | 712 |
| 6.2 | Computation of stresses and displacements | 712 |
| 6.3 | Computation of a seepage flow | 716 |
| 6.4 | Presentation and interpretation of the computed results | 718 |
| 6.5 | Influence of shear parameters of discontinuities on the stability of a slope | 720 |
| 6.6 | Support of a slope with prestressed anchors | 723 |
| 6.7 | Influence of high horizontal in-situ stresses | 725 |
| 6.8 | Stability investigations on the wall of a construction pit using a refined conceptual model of the mechanical behaviour of a rock mass | 731 |
| 7 | Stability analysis on the basis of rigid-body mechanics | 735 |
| 7.1 | General | 735 |
| 7.2 | Possibilities of translation and rotation of rock mass wedges | 735 |

7.3 Stability analysis of planar rock mass wedges . . . . . 740
7.4 Stability analysis of three-dimensional rock mass wedges supported by two discontinuities . . . . . 748
7.5 Stability analysis of three-dimensional rock mass wedges supported by three discontinuities . . . . . 757
8 Buckling problems . . . . . 758
9 Example for the stabilization of a slope failure . . . . . 759
9.1 General . . . . . 759
9.2 Landslide and immediate action . . . . . 759
9.3 Results of the measurements and explorations . . . . . 764
9.4 Concepts for stabilization of the slope . . . . . 766
9.5 Chosen measure for stabilization . . . . . 769
9.6 Drainage measures . . . . . 770
10 References . . . . . 771

**Subject index** . . . . . 775
