## 3.1 Spread foundations

*Ulrich Smoltczyk, Dieter Netzel, and Manfred Kany*

|     |   |    |
|-----|---|----|
| 1   | Definitions . . . . .                                 | 1  |
| 2   | Basis of design . . . . .                             | 1  |
| 3   | Footings . . . . .                                    | 3  |
| 3.1 | General aspects of design . . . . .                   | 3  |
| 3.2 | Geotechnical design . . . . .                         | 13 |
| 3.3 | Structural design . . . . .                           | 39 |
| 4.  | Slab foundations . . . . .                            | 46 |
| 4.1 | General . . . . .                                     | 46 |
| 4.2 | Vertical interaction . . . . .                        | 46 |
| 4.3 | Horizontal interaction, restraints . . . . .          | 61 |
| 5   | Mat foundations (tank foundations) . . . . .          | 71 |
| 5.1 | General . . . . .                                     | 71 |
| 5.2 | Geotechnical verifications . . . . .                  | 72 |
| 5.3 | Groundwater protection . . . . .                      | 75 |
| 6   | Tension foundations . . . . .                         | 76 |
| 7   | References, standards and software . . . . .          | 77 |
| 7.1 | References . . . . .                                  | 77 |
| 7.2 | Programmes and guidebooks . . . . .                   | 80 |
| 7.3 | European codes (Status 2002) . . . . .                | 81 |
| 7.4 | German standards referenced in this chapter . . . . . | 81 |

## 3.2 Pile foundations

*Hans-Georg Kempfert, Kurt Dieter Eigenbrod, and  
Ulrich Smoltczyk (Section 8)*

|     |   |     |
|-----|---|-----|
| 1   | Introduction . . . . .                                    | 83  |
| 1.1 | Applications . . . . .                                    | 83  |
| 1.2 | Governing codes and safety concepts . . . . .             | 83  |
| 1.3 | Preliminary investigations for pile foundations . . . . . | 84  |
| 1.4 | Terminology . . . . .                                     | 85  |
| 2   | Pile types and construction methods . . . . .             | 87  |
| 2.1 | Selection of appropriate pile type . . . . .              | 87  |
| 2.2 | Quality assurance and control . . . . .                   | 88  |
| 2.3 | Displacement piles . . . . .                              | 89  |
| 2.4 | Bored piles . . . . .                                     | 104 |
| 2.5 | Micropiles . . . . .                                      | 109 |
| 2.6 | Measures to increase pile resistance . . . . .            | 113 |

|      |  |     |
|------|--|-----|
| 3    | Axial pile resistance . . . . .                          | 115 |
| 3.1  | Single piles . . . . .                                   | 115 |
| 3.2  | Compression pile groups . . . . .                        | 141 |
| 3.3  | Pile-raft foundations . . . . .                          | 149 |
| 3.4  | Tension pile groups . . . . .                            | 157 |
| 4    | Lateral pile resistance and moment actions . . . . .     | 157 |
| 4.1  | Single piles . . . . .                                   | 157 |
| 4.2  | Lateral resistance of pile groups . . . . .              | 163 |
| 5    | Soil action . . . . .                                    | 167 |
| 5.1  | Negative skin friction . . . . .                         | 167 |
| 5.2  | Lateral pressure and bending due to settlement . . . . . | 170 |
| 6    | Bearing capacity and serviceability . . . . .            | 173 |
| 6.1  | General . . . . .  | 173 |
| 6.2  | Bearing capacity (ULS) . . . . .                         | 174 |
| 6.3  | Calculation of serviceability . . . . .                  | 181 |
| 7    | Testing of piles . . . . .                               | 184 |
| 7.1  | General . . . . .  | 184 |
| 7.2  | Static axial load tests . . . . .                        | 184 |
| 7.3  | Static horizontal pile load tests . . . . .              | 192 |
| 7.4  | Dynamic pile testing . . . . .                           | 196 |
| 8    | Analysis of pile structures . . . . .                    | 202 |
| 8.1  | General . . . . .  | 202 |
| 8.2  | Piling systems . . . . .                                 | 203 |
| 8.3  | Analysis of axially loaded pile systems . . . . .        | 203 |
| 8.4  | Special simple cases . . . . .                           | 206 |
| 8.5  | Deviations from initial assumptions . . . . .            | 211 |
| 8.6  | Design of non-axially loaded pile foundations . . . . .  | 213 |
| 8.7  | Check for buckling . . . . .                             | 218 |
| 8.8  | Sheet pile wall as part of a piled foundation . . . . .  | 218 |
| 8.9  | Eigenfrequencies of a spatial piling system . . . . .    | 219 |
| 8.10 | Example . . . . .  | 220 |
| 9    | References . . . . .                                     | 223 |

### 3.3 Caissons

*Hans Lingenfelser*

|     |   |     |
|-----|---|-----|
| 1   | General . . . . .   | 229 |
| 1.1 | Terms . . . . .   | 229 |
| 1.2 | Typical features of pneumatic caissons . . . . .              | 230 |
| 1.3 | Typical features of open caissons (wells) . . . . .           | 231 |
| 1.4 | Fields of application . . . . .                               | 232 |
| 2   | Structural concept and equipment . . . . .                    | 234 |
| 2.1 | General . . . . .   | 234 |
| 2.2 | Construction materials . . . . .                              | 234 |
| 2.3 | Caisson edges . . . . .                                       | 235 |
| 2.4 | Caisson working chamber and working chamber ceiling . . . . . | 237 |
| 2.5 | Open caisson bottom . . . . .                                 | 238 |
| 2.6 | Caissons walls . . . . .                                      | 240 |
| 3   | Construction of caissons . . . . .                            | 241 |
| 3.1 | Manufacture on land . . . . .                                 | 241 |

|     |  |     |
|-----|--|-----|
| 3.2 | Construction in open water . . . . .             | 242 |
| 3.3 | Construction in a dock and floating in . . . . . | 243 |
| 4   | Sinking the caissons . . . . .                   | 245 |
| 4.1 | Soil excavation . . . . .                        | 245 |
| 4.2 | Control of sinking . . . . .                     | 247 |
| 4.3 | Sinking tolerances . . . . .                     | 247 |
| 4.4 | Ballasting . . . . .                             | 249 |
| 5   | Pneumatic installation and works . . . . .       | 250 |
| 5.1 | Regulations governing pneumatic works . . . . .  | 250 |
| 5.2 | Essential pneumatic equipment . . . . .          | 251 |
| 6   | Caisson calculation . . . . .                    | 253 |
| 6.1 | General . . . . .                                | 253 |
| 6.2 | Calculation of the lowering diagram . . . . .    | 254 |
| 6.3 | Loads working on the caisson cutters . . . . .   | 255 |
| 6.4 | Dimensioning for the lowering phases . . . . .   | 257 |
| 7   | Construction examples . . . . .                  | 259 |
| 8   | References . . . . .                             | 271 |

### 3.4 Stability of excavations

*Anton Weissenbach, Achim Hettler, and Brian Simpson*

|     |   |     |
|-----|---|-----|
| 1   | Construction measures for the stability of excavations . . . . .          | 273 |
| 1.1 | Unlined excavations . . . . .   | 273 |
| 1.2 | Timbered trenches . . . . .   | 275 |
| 1.3 | Sheet pile walls . . . . .  | 278 |
| 1.4 | Soldier pile walls . . . . .  | 279 |
| 1.5 | Solid walls . . . . .   | 284 |
| 1.6 | Support by bracing . . . . .  | 287 |
| 2   | Basic design assumptions . . . . .  | 290 |
| 2.1 | Soil properties, loads and general rules . . . . .                        | 290 |
| 2.2 | Active earth pressure for cantilever walls . . . . .                      | 291 |
| 2.3 | Active earth pressure for walls supported by props and anchors . . . . .  | 293 |
| 2.4 | Active earth pressure from surcharges . . . . .                           | 301 |
| 2.5 | Earth pressure under backfill conditions . . . . .                        | 304 |
| 2.6 | Passive earth pressure . . . . .  | 306 |
| 3   | Calculation procedures . . . . .  | 310 |
| 3.1 | Walls with fixed earth support . . . . .                                  | 310 |
| 3.2 | Walls with free earth support . . . . .                                   | 313 |
| 3.3 | Multiple supported walls . . . . .  | 315 |
| 3.4 | Calculation using subgrade reaction . . . . .                             | 318 |
| 3.5 | Numerical analysis . . . . .  | 320 |
| 3.6 | Equilibrium of vertical forces . . . . .                                  | 329 |
| 3.7 | Determination of the vertical component of the earth resistance . . . . . | 333 |
| 3.8 | Equilibrium of horizontal forces in soldier pile walls . . . . .          | 334 |
| 3.9 | Heave of the excavation bottom . . . . .                                  | 337 |
| 4   | Safety concepts . . . . .   | 339 |
| 4.1 | British design approach . . . . .   | 339 |
| 4.2 | German design approach . . . . .  | 347 |
| 4.3 | General regulations in EC 7 . . . . .                                     | 351 |
| 4.4 | Design Approach 1 . . . . .   | 354 |

|     |   |     |
|-----|---|-----|
| 4.5 | Design Approach 2 . . . . .                                       | 357 |
| 5   | Special constructions . . . . .                                   | 361 |
| 5.1 | Anchored walls . . . . .  | 361 |
| 5.2 | Excavation walls supported by raking props . . . . .              | 364 |
| 5.3 | Large excavations . . . . .                                       | 365 |
| 5.4 | Some features related to specific shapes of excavations . . . . . | 368 |
| 5.5 | Excavation with asymmetric cross sections . . . . .               | 374 |
| 5.6 | Excavation walls adjacent to existing buildings . . . . .         | 377 |
| 5.7 | Excavations under water . . . . .                                 | 382 |
| 5.8 | Excavations in jointed, unstable rock . . . . .                   | 392 |
| 5.9 | Excavations in soft soils . . . . .                               | 394 |
| 6   | Calculation examples . . . . .                                    | 397 |
| 6.1 | Problem . . . . .   | 397 |
| 6.2 | German design approach . . . . .                                  | 398 |
| 6.3 | Eurocode 7: Design Approach 2 . . . . .                           | 401 |
| 7   | References . . . . .  | 404 |

### **3.5 Bored pile walls, diaphragm walls, cut-off walls**

*Manfred Stocker and Bernhard Walz*

|      |   |     |
|------|---|-----|
| 1    | Bored pile walls . . . . .  | 409 |
| 1.1  | Field of application . . . . .                                    | 409 |
| 1.2  | Advantages . . . . .  | 410 |
| 1.3  | Disadvantages . . . . .   | 411 |
| 1.4  | Standards and references . . . . .                                | 411 |
| 1.5  | Purpose and wall types . . . . .                                  | 411 |
| 1.6  | Construction . . . . .  | 412 |
| 1.7  | Quality assurance . . . . .                                       | 414 |
| 2    | Diaphragm walls . . . . .   | 414 |
| 2.1  | Field of application . . . . .                                    | 414 |
| 2.2  | Advantages . . . . .  | 415 |
| 2.3  | Disadvantages . . . . .   | 415 |
| 2.4  | Standards and references . . . . .                                | 416 |
| 2.5  | Purpose . . . . .   | 416 |
| 2.6  | Wall types . . . . .  | 416 |
| 2.7  | Construction . . . . .  | 421 |
| 2.8  | Construction materials . . . . .                                  | 425 |
| 2.9  | Characteristics . . . . .   | 426 |
| 2.10 | Quality assurance . . . . .                                       | 427 |
| 3    | Thin cut-off walls . . . . .                                      | 428 |
| 3.1  | Field of application . . . . .                                    | 428 |
| 3.2  | Advantages . . . . .  | 429 |
| 3.3  | Disadvantages . . . . .   | 429 |
| 3.4  | Standards and references . . . . .                                | 429 |
| 3.5  | Purpose and types of wall . . . . .                               | 429 |
| 3.6  | Construction of a vibrated thin cut-off wall or vibwall . . . . . | 430 |
| 3.7  | Construction materials . . . . .                                  | 433 |
| 3.8  | Characteristics . . . . .   | 434 |
| 3.9  | Quality assurance . . . . .                                       | 434 |
| 4    | Stabilizing of earth walls using fluids . . . . .                 | 435 |

|     |  |     |
|-----|--|-----|
| 4.1 | Supporting fluids . . . . .  | 435 |
| 4.2 | Fluid supporting force and stability determination . . . . .                                   | 436 |
| 4.3 | Mechanisms for transferring the fluid pressure difference<br>onto the grain skeleton . . . . . | 437 |
| 4.4 | Proof of the „internal“ stability . . . . .  | 440 |
| 4.5 | Proof of the „external“ stability . . . . .  | 442 |
| 4.6 | Structural facilities close to suspension stabilized earth walls . . . . .                     | 446 |
| 5   | Standards and recommendations . . . . .  | 447 |
| 5.1 | Standards . . . . .  | 447 |
| 5.2 | Recommendations . . . . .  | 448 |
| 6   | References . . . . .   | 448 |

### 3.6 Sheet pile walls for harbours and waterways

Boleslav Mazurkiewicz

|     |   |     |
|-----|---|-----|
| 1   | Sheet pile wall structures, their performance and field of application . . . . .  | 451 |
| 1.1 | General . . . . .   | 451 |
| 1.2 | Application purpose . . . . .   | 451 |
| 1.3 | Usability of different construction materials . . . . .   | 452 |
| 2   | Regulations concerning sheet pile walls . . . . .   | 452 |
| 2.1 | Sheet pile wall structures, EN 12063/1999 . . . . .   | 452 |
| 2.2 | Recommendations of the Committee for Waterfront Structures,<br>Harbours and Waterways, EAU 1996 . . . . .                           | 453 |
| 2.3 | Eurocode 3: Design of steel structures – Part 5: Piling . . . . .   | 453 |
| 2.4 | Other recommendations and handbooks . . . . .   | 453 |
| 3   | Sheet pile types, profiles and anchoring parts, quality and steel grades . . . . .  | 454 |
| 3.1 | Steel sheet pile walls . . . . .  | 456 |
| 4   | Basic design of sheet pile walls . . . . .  | 457 |
| 4.1 | Safety concept . . . . .  | 457 |
| 4.2 | Actions and resistances . . . . .   | 457 |
| 4.3 | Load cases . . . . .  | 458 |
| 4.4 | Ultimate limit state design of sheet pile wall structures . . . . .   | 459 |
| 5   | Calculation methods for sheet pile walls . . . . .  | 460 |
| 5.1 | Calculation of a single-anchored sheet pile wall according to Blum . . . . .  | 461 |
| 5.2 | Special cases of sheet pile wall calculation . . . . .  | 465 |
| 5.3 | Calculation principles for combined steel sheet pile walls . . . . .  | 468 |

### 3.8 Machine foundations

*Günter Klein and Dietrich Klein*

|     |   |     |
|-----|---|-----|
| 1   | Overview . . . . .  | 519 |
| 1.1 | Classification of machine foundations . . . . .                                       | 519 |
| 1.2 | Requirements for machine foundations . . . . .  | 519 |
| 2   | Loads on machine foundations . . . . .  | 521 |
| 2.1 | Static loads . . . . .  | 521 |
| 2.2 | Periodic loads . . . . .  | 522 |
| 2.3 | Transient loads . . . . .   | 525 |
| 2.4 | Random loads . . . . .  | 530 |
| 3   | Analysis and design of machine foundations . . . . .                                  | 532 |
| 3.1 | Types of supports . . . . .   | 532 |
| 3.2 | Rigid foundations . . . . .   | 536 |
| 3.3 | Elastic foundations . . . . .   | 539 |
| 3.4 | Spring foundations . . . . .  | 545 |
| 3.5 | Design recommendations . . . . .  | 546 |
| 4   | Examples . . . . .  | 547 |
| 4.1 | Hammer foundation . . . . .   | 547 |
| 4.2 | Reinforced concrete box foundation for a 100 MW steam turbine-generator set . . . . . | 550 |
| 5   | References . . . . .  | 557 |
| 5.1 | Standards . . . . .   | 557 |
| 5.2 | Books and Papers . . . . .  | 557 |

**3.9 Foundations in mining regions***Dietmar Placzek*

|     |   |     |
|-----|---|-----|
| 1   | General remarks on mining-induced effects . . . . .                       | 559 |
| 2   | Ground movements . . . . .  | 559 |
| 2.1 | Ground movements above deep mine workings . . . . .                       | 559 |
| 2.2 | Ground movements above shallow and near-surface mine workings . . . . .   | 563 |
| 3   | Influence of ground movements on the foundation . . . . .                 | 564 |
| 3.1 | Influence of equal vertical subsidence . . . . .                          | 564 |
| 3.2 | Influence of tilt – differential vertical subsidence . . . . .            | 564 |
| 3.3 | Influence of curvature . . . . .  | 566 |
| 3.4 | Influence of strain . . . . .   | 566 |
| 3.5 | Influence of ground movements above near-surface mine workings . . . . .  | 567 |
| 3.6 | Influence of discontinuous ground movements . . . . .                     | 568 |
| 4   | Preventive measures in areas with deep mine workings . . . . .            | 568 |
| 4.1 | Types of preventive measures . . . . .                                    | 568 |
| 4.2 | Basic considerations on layout and design of surface structures . . . . . | 569 |
| 4.3 | Bearing capacity and functionality of a structure . . . . .               | 570 |
| 4.4 | Provisions for tilt . . . . .   | 570 |
| 4.5 | Provisions for curvature . . . . .  | 571 |
| 4.6 | Provisions for extensional strain . . . . .                               | 575 |
| 4.7 | Provisions for compressive strain . . . . .                               | 577 |
| 4.8 | Provisions for discontinuous ground movements . . . . .                   | 579 |
| 5   | Preventive measures in areas with near-surface mine workings . . . . .    | 579 |
| 5.1 | Types of preventive measures . . . . .                                    | 579 |
| 5.2 | Preventive measures for structures . . . . .                              | 580 |
| 5.3 | Stabilisation of the ground by injection . . . . .                        | 581 |
| 6   | Preventive measures for tunnels . . . . .                                 | 584 |
| 6.1 | General remarks . . . . .   | 584 |
| 6.2 | Options for preventive measures . . . . .                                 | 585 |
| 7   | Upgrading of existing structures . . . . .                                | 585 |
| 7.1 | Preliminary remarks . . . . .   | 585 |
| 7.2 | Provisions for equal vertical subsidence . . . . .                        | 586 |
| 7.3 | Provisions for differential vertical subsidence . . . . .                 | 586 |
| 7.4 | Provisions for horizontal ground movements . . . . .                      | 587 |
| 8   | References . . . . .  | 589 |

**3.10 Watertight buildings and structures***Alfred Haack and Karl-Friedrich Emig*

|     |  |     |
|-----|--|-----|
| 1   | General . . . . .  | 501 |
| 2   | General aspects of design . . . . .                      | 502 |
| 2.1 | Geotechnical and structural influences . . . . .         | 502 |
| 2.2 | Serviceability provisions . . . . .                      | 504 |
