

SHALLOW FOUNDATIONS

Bearing Capacity and Settlement

Braja M. Das

CRC Press

Boca Raton London New York Washington, D.C.

CONTENTS

ONE	INTRODUCTION	1
	1.1 Shallow Foundations—General	1
	1.2 Types of Failure in Soil at Ultimate Load	2
	1.3 Settlement at Ultimate Load	6
	1.4 Ultimate and Allowable Bearing Capacities	6
	References	9
TWO	ULTIMATE BEARING CAPACITY THEORIES— CENTRIC VERTICAL LOADING	11
	2.1 Introduction	11
	2.2 Terzaghi's Bearing Capacity Theory	11
	2.3 Terzaghi's Bearing Capacity Theory for Local Shear Failure	24
	2.4 Meyerhof's Bearing Capacity Theory	27
	2.5 General Discussion on the Relationships of Bearing Capacity Factors	40
	2.6 Other Bearing Capacity Theories	43
	2.7 Scale Effects on Bearing Capacity	45
	2.8 Effect of Water Table	47
	2.9 General Bearing Capacity Equation	51
	2.10 Effect of Soil Compressibility	54
	2.11 Bearing Capacity of Foundations on Anisotropic Soil	58
	2.12 Allowable Bearing Capacity With Respect to Failure	73
	2.13 Interference of Continuous Foundations in Granular Soil	76
	References	81
THREE	ULTIMATE BEARING CAPACITY UNDER INCLINED AND ECCENTRIC LOADS	85
	3.1 Introduction	85
	FOUNDATIONS SUBJECTED TO INCLINED LOAD	85
	3.2 Meyerhof's Theory (Continuous Foundation)	85
	3.3 General Bearing Capacity Equation	89
	3.4 Other Results For Foundations With Centric Inclined Load	89
	3.5 Continuous Foundation With Eccentric Load	93
	3.6 Ultimate Load on Rectangular Foundations	102
	References	115

FOUR	SPECIAL CASES OF SHALLOW FOUNDATIONS ..	117
4.1	Introduction	117
4.2	Foundation Supported by a Soil With a Rigid Rough Base at a Limited Depth	117
4.3	Foundation on Layered Saturated Anisotropic Clay ($\phi = 0$)	126
4.4	Foundation on Layered $c-\phi$ Soil—Stronger Soil Underlain by Weaker Soil	135
4.5	Foundation on Layered $c-\phi$ Soil—Weaker Soil Underlain by a Stronger Soil	151
4.6	Continuous Foundation on Weak Clay With a Granular Trench	155
4.7	Shallow Foundations Above a Void	162
4.8	Foundations on a Slope	164
4.9	Foundations on Top of a Slope	166
	References	180
FIVE	SETTLEMENT AND ALLOWABLE BEARING CAPACITY	183
5.1	Introduction	183
5.2	Stress Increase in Soil Due to Applied Load	184
	ELASTIC SETTLEMENT	195
5.3	Flexible and Rigid Foundations	195
5.4	Settlement Under a Circular Area	197
5.5	Settlement Under a Rectangular Area	201
5.6	Effect of a Rigid Base at a Limited Depth	206
5.7	Effect of Depth of Embedment	208
5.8	Elastic Parameters	210
5.9	Settlement of Foundations on Saturated Clay	211
5.10	Settlement of Foundations on Sand	216
5.11	Field Plate Load Tests	224
	CONSOLIDATION SETTLEMENT	227
5.12	General Principles of Consolidation Settlement	227
5.13	Relationships for Primary Consolidation Settlement Calculation	229
5.14	Three-Dimensional Effect on Primary Consolidation Settlement	237
5.15	Secondary Consolidation Settlement	244
	DIFFERENTIAL SETTLEMENT	245
5.16	General Concepts of Differential Settlement	245
5.17	Limiting Values of Differential Settlement Parameters	247
	References	248
SIX	DYNAMIC BEARING CAPACITY AND SETTLEMENT	251
6.1	Introduction	251

6.2	Effect of Load Velocity on Ultimate Bearing Capacity	251
6.3	Ultimate Bearing Capacity Under Earthquake Loading	254
6.4	Settlement of Foundations on Granular Soil Due to Earthquake Loading	265
6.5	Foundation Settlement Due to Cyclic Loading— Granular Soil	269
6.6	Foundation Settlement Due to Cyclic Loading in Saturated Clay	277
6.7	Settlement Due to Transient Load on Foundation ..	282
	References	286

SEVEN	SHALLOW FOUNDATIONS ON REINFORCED SOIL	287
7.1	Introduction	287
	FOUNDATIONS ON METALLIC STRIP-REINFORCED GRANULAR SOIL	287
7.2	Failure Mode	287
7.3	Force in Reinforcement Ties	290
7.4	Factor of Safety Against Tie Breaking and Tie Pullout	293
7.5	Design Procedure for a Continuous Foundation	295
	FOUNDATIONS ON GEOTEXTILE-REINFORCED SOIL ..	300
7.6	Laboratory Model Test Results	300
7.7	Comments on Geotextile Reinforcement	302
	FOUNDATIONS ON GEOGRID-REINFORCED SOIL	303
7.8	General Parameters	303
7.9	Relationships for Critical Nondimensional Parameters for Foundations on Geogrid- Reinforced Sand	306
7.10	Relationship Between BCR_u and BCR_s in Sand	308
7.11	Critical Nondimensional Parameters for Foundations on Geogrid-Reinforced Clay ($\phi = 0$ condition)	310
7.12	Bearing Capacity Theory	312
7.13	Settlement of Foundations on Geogrid- Reinforced Soil Due to Cyclic Loading	312
7.14	Settlement Due to Impact Loading	317
	References	320

EIGHT	UPLIFT CAPACITY OF SHALLOW FOUNDATIONS	323
8.1	Introduction	323
	FOUNDATIONS IN SAND	324
8.2	Balla's Theory	324
8.3	Theory of Meyerhof and Adams	327

8.4	Theory of Vesic	335
8.5	Sacedy's Theory	340
8.6	Discussion of Various Theories	340
8.7	Effect of Backfill on Uplift Capacity	345
	FOUNDATIONS IN SATURATED CLAY	
	($\phi = 0$ CONDITION)	348
8.8	Ultimate Uplift Capacity—General	348
8.9	Vesic's Theory	348
8.10	Meyerhof's Theory	350
8.11	Modifications to Meyerhof's Theory	351
8.12	Factor of Safety	355
	References	355

APPENDIX

	Conversion Factors	357
