PROCEEDINGS OF THE SIXTH INTERNATIONAL CONFERENCE ON NUMERICAL METHODS IN GEOMECHANICS / INNSBRUCK / 11-15 APRIL 1988

Numerical Methods in Geomechanics Innsbruck 1988

Edited by
G.SWOBODA
Institute of Structural Engineering, University of Innsbruck

VOLUME THREE:
10 *Tunnels and underground openings*
11 *Dynamic and earthquake engineering problems, blasting*
12 *Mining applications*
13 *Interpretation of field measurements, back analysis*
14 *Use of microcomputers*
15 *CAD, mesh generation, software*

Published on behalf of the International Committee for Numerical Methods in Geomechanics by
A.A.BALKEMA / ROTTERDAM / BROOKFIELD / 1988

Numerical Methods in Geomechanics (Innsbruck 1988), Swoboda (ed.)
© 1988 Balkema, Rotterdam. ISBN 90 6191 809 X

Contents

10 *Tunnels and underground openings*

Numerical analysis and reality in tunnelling – Verification by measurements ? 1457
Th.Baumann

Application of the 'decoupled finite element analysis' in tunnelling 1465
G.Swoboda, H.Ebner, S.J.Wang & J.M.Zhang

A numerical method for the analysis of unlined pressure tunnels in jointed rock 1473
Ming Lü & E.T.Brown

Three-dimensional simulation of an advancing tunnel supported with forepoles, shotcrete, steel ribs and rockbolts 1481
Ö.Aydan, T.Kyoya, Y.Ichikawa, T.Kawamoto, T.Ito & Y.Shimizu

Analysis of a multiple tunnel interaction problem 1487
S.L.Lee, K.W.Lo & L.K.Chang

Study of tunnel face in a gravel site 1493
S.Chaffois, J.Monnet, C.Chapeau & P.Laréal

Two-dimensional calculation model in tunneling – Verification by measurement results and by spatial calculation 1499
K.Schikora & B.Ostermeier

FE analysis of underground openings in creeping rock salt 1505
W.Berwanger

Tunnel design using the 'trapdoor' problem 1511
N.C.Koutsabeloulis

Rock mass modelling for large underground powerhouses 1517
K.Hönisch

Behaviour of concrete tunnels in viscoelastic time-dependent rocks 1523
B.B.Budkowska, K.Ghavami & Q.Fu

Geonumerical computations for the determination of critical deformations in shallow tunneling 1531
H.Wagner & A.Schulter

Finite element analysis of underground openings using space elasto-plastic theory 1537
Y.R.Zheng, Z.H.Xu, J.Chu & W.Wu

Zürich Mass Rapid Transit line – Soil mechanical analysis for soft ground tunneling by application of the freezing method 1543
Klaus Mettier

Influence of the heading face and a two-dimensional calculation model of tunnel linings 1551
V.H.Vassilev & T.N.Hristov

Finite element analysis of tunnel linings with emphasis on the nonlinearity of concrete 1557
E.Haugeneder & M.Mehl

Flexible steel tunnel lining response to unloading-reloading cycle 1567
Mohammad Irshad, Jerome S.B.Iffland & Royce A.Drake, Jr.

Numerical analysis of tunnel behaviour in creep-susceptible clays 1575
Robert Y.K.Liang

Prediction of tunnelling effect on groundwater condition by the water balance block method 1585
K.Daito & K.Ueshita

Deformation behaviour of the tunnel under the excavation of crossing tunnel 1591
S.Tsuchiyama, M.Hayakawa, T.Shinokawa & H.Konno

Analysis of stresses in the pillar zone of twin circular interacting tunnels 1597
R.K.Srivastava, K.G.Sharma & A.Varadarajan

Applying the theory of plastic intensification to calculate the stress in shotcrete and rockbolt lining of hydraulic pressure tunnel and its surrounding rock 1607
Younian Lu & Xiaohong Cai

Numerical-analytical technique of optimizing the layout of parallel tunnels in seismic regions 1617
Nina N.Fotieva & A.N.Kozlov

Simulation of a tunnel behaviour from data provided by a reconnaissance gallery 1623
M.Deffayet & A.Robert

Theoretical investigation of a yielding precast reinforced concrete lining in oligocene clay 1629
M.Müller

A method for the analysis and design of flexible retaining structures – Application to a strutted excavation 1635
Giovanni Barla, Bruno Becci, Adolfo Colombo, Roberto Nova & Renato Peduzzi

An application of a strainhardening model to the design of tunnels in sand 1641
E.Botti, G.Canetta, R.Nova & R.Peduzzi

11 *Dynamic and earthquake engineering problems, blasting*

Continuum-boundary element and experimental models of soil-foundations interaction 1649
L.Gaul, P.Klein & M.Plenge

Non-linear response of a soil with a harmonic loading: A numerical-analytical method 1663
J.F.Heitz, G.Bonnet & T.Avril

Nonlinear pile driving problems calculated in the Laplace domain 1671
P.Hillmer & G.Schmid

Static and dynamic analysis of moderately thick plates on Pasternak foundation using classical plate theory 1677
Hans Irschik & Rudolf Heuer

Practical considerations of blast loading in tunneling using numerical modeling 1681
G.Swoboda & G.Zenz

Response of underground openings to earthquake and blasting loading 1689
H.-J.Alheid, K.-G.Hinzen, A.Honecker & W.Sarfeld

The effects of rock blasting with explosives on the stability of a rock face 1697
Masantonio Cravero, Giorgio Iabichino & Renato Mancini

Dynamic response analysis of ground using a coupled finite and boundary element method for time marching analysis 1707
Terumi Touhei & Nozomu Yoshida

A numerical study of dynamic cavity expansion 1715
M.F.Randolph & D.S.Pennington

Vibration of thick plates on three-dimensional multilayered soil 1723
Jerzy Kujawski, Czeslaw Miedzialowski & Nils-Erik Wiberg

Seismic response of ground under multi-directional shaking 1731
L.Briseghella & A.Reginato

Earthquake response of arch dams including the foundation-reservoir-dam interaction 1739
Raimundo M.Delgado & Rui M.Faria

Seismic stability of earth and rockfill dams 1743
E.Baldovin & P.Paoliani

Two-dimensional nonlinear response analysis during earthquakes based on the effective stress method 1749
Mamoru Kanatani, Koichi Nishi, Makoto Kawakami & Masayuki Ohnami

Ultrasonic wave attenuation in dry and saturated rock under biaxial pressure 1755
Yijun Zhao & Zhaodin Li

Bearing capacity of offshore piles by dynamic relaxation procedures 1763
N.F.F.Ebecken, A.L.G.A.Coutinho, L.Landau & A.Maia da Costa

Comparison of prediction methods for sand liquefaction 1769
Y.Sunasaka, H.Yoshida, K.Suzuki & T.Matsumoto

Earthquake-induced translational and rotational motions of liquid-filled tanks based on a compliant soil 1775
R.Seeber & F.D.Fischer

Study of numerical constitutive models for liquefaction problem 1783
T.Shiomi, S.Tsukuni, Y.Tanaka, M.Hatanaka, Y.Suzuki & T.Hirose

Numerical analysis of the nonlinear earthquake response of an earth dam 1791
S.J.Lacy & J.H.Prevost

Discrete element analysis of granular material under dynamic loading 1799
J.R.Williams

Probabilistic evaluation of soil-structure interaction in liquefaction 1805
Achintya Haldar & Shuh-Gi Chern

Two-dimensional seismic response analysis based on multiple yield surface model 1811
K.Kabilamany & K.Ishihara

Random response of structures to earthquake 1817
A.Y.T.Leung

Dynamic stiffness of rigid strip footing on nonhorizontally layered soil stratum 1825
H.T.Chen & J.L.Kow

Seismic modelling and design of underground structures 1833
J.E.Monsees & J.L.Merritt

The foundation influence in the earthquake response of arch dams 1843
Raimundo M.Delgado & Rui M.Faria

A numerical analysis on the shape of the response spectra in cohesive and granular soils with non-linear behaviour 1849
S.Lagomarsino

Dynamic failure of rockfill models simulated by the distinct element method 1855
Tatsuo Omachi & Yasuhiro Arai

Deformation behaviour of artificial saturated soil bases under seismic action 1861
V.A.Ilyichev, V.M.Likhovtsev & A.Y.Kurdyuk

12 *Mining applications*

Simulation of hydraulic filling of large underground mining excavations 1869
R.Cowling, A.G.Grice & L.T.Isaacs

A theoretical analysis of the stability of underground openings due to storage of LPG 1877
Y.Inada & K.Takaichi

Constitutive behaviour of rock salt: Power law or hyperbolic sine creep 1883
G.Borm & M.Haupt

3-D FEM analysis of a room and pillar mine housing industrial waste 1895
G.P.Giani

Modelling of subsidence caused by longwall mining using finite element and displacement discontinuity methods 1901
H.J.Siriwardane & J.Amanat

On the solution of large 3-D geomechanical problems 1911
R.Blaheta & Z.Dostál

Finite elements investigation of the peculiarities of three-dimensional state of stress of rock mass in the process of mining 1917
A.A.Kozyrev, S.N.Savchenko & V.A.Maltsev

Stress analysing of the rock surrounding a shaft and its application 1923
Hua Anzeng & Zhuo Zhaowei

A new approach to borehole stability based on bifurcation theory 1929
J.Sulem & I.Vardoulakis

Parameter identification of the unified model of methane gas flow in coal 1937
V.U.Nguyen

A technique and program for computing stress-strain state of mining system elements and mining openings in solid and fractured rock mass 1947
N.P.Vlokh & O.V.Zoteyev

Numerical stability investigations of drifts in stratified salt rock 1953
W.Hüls, A.Lindert & W.Schreiner

Modelling of cut-and-fill mining systems – Nasliden revisited 1959
Ye Qian Yuan & William Hustrulid

The numerical simulation of floor heave in deep roadway on Long-feng mine 1965
Yishan Pan, Cengdan Liu & Mengtao Zhang

A study of computer engineering classification method 1971
Y.M.Lin

The application of digital modelling to geomechanical problems of Polish mining 1981
H.Filcek & J.Walaszczyk

Three-dimensional finite element and discrete element coupling method applied to shaft deformation and earth's surface subsidence caused by coal mining 1987
Liang Bing & Wang Laigui

Rock movement and surface subsidence of South Xikuangshan mine 1993
Zhang Zhihua, Zhou Jifu & Hu Qinghuai

13 *Interpretation of field measurements, back analysis*

Reliability of constitutive parameters for a soil obtained from laboratory test data 2001
M.M.Zaman, A.Honarmandebrahimi & J.G.Laguros

Back analysis using prior information – Application to the staged excavation of a cavern in rock 2009
A.Gens, A.Ledesma & E.E.Alonso

Identification of the damage tensor for jointed rock mass by an inverse analysis method 2017
T.Kyoya, Y.Ichikawa, O.Aydan & T.Kawamoto

Calculation and measurement of stress changes induced in a single-heater test in rock salt 2023
S.Heusermann & N.Jacob

Finite element analysis of discontinuous geological materials in association with field observations 2029
S.Sakurai, T.Ine & M.Shinji

The importance of soil yield in the performance of an embankment on soft ground 2035
A.B.Fourie & P.Klibbe

Soil-structure interaction related to actual construction sequences 2043
H.Ohta & A.Iizuka

Back analysis using Kalman filter-finite elements and optimal location of observed points 2051
Akira Murakami & Takashi Hasegawa

Determination of optimum tunnel shape by three-dimensional back analysis 2059
M.Hisatake

FEM analysis for rockburst and its back analysis for determining in-situ stress 2065
Lu Jiayou, Wang Changming & Huai Jun

Back analysis for determining nonlinear mechanical parameters in soft clay excavation 2069
G.X.Zeng, X.N.Gong, J.B.Nian & Y.F.Hu

Use of the calculated soil seeping consolidation in the analysis of the measured pore pressures 2075
S.V.Bortkevich & N.A.Krasilnikov

Prognosis determination of rock state of stress deformations and stability development on models in connection with the construction of tunnels 2081
F.Nazari

Numerical calculation for synthetic analysis of the crustal stress field at Laxiwa dam site 2087
Liu Shi-Huang

Development of a computer system on monitoring geotechnical measurements 2093
E.Lindner

14 *Use of microcomputers*

A microcomputer program for modelling large-strain plasticity problems 2101
Peter Cundall & Mark Board

Finite layer analysis of layered pavements subjected to horizontal loading 2109
J.R.Booker & J.C.Small

Application of Powell's conjugate direction method to slope stability analysis 2115
Jay S.DeNatale & Nassim R.Abifadel

Z-SOIL.PC: A program for solving soil mechanics problems on a personal computer using plasticity theory 2121
Th.Zimmermann, C.Rodriguez & B.Dendrou

Prediction of the settlement of an embankment using a micro-computer 2127
A.S.Balasubramaniam, S.Chandra & Pisit Kuntiwattanakul

Soil-structure interaction analyses on microcomputers 2133
J.K.Jeyapalan & S.W.Ethiyajeevakaruna

Estimation of subsurface ground layer using a data base system 2139
M.Kawamura & A.Takada

General slope stability software package for micro-computers 2145
M.Maksimovic

A comparison of four slip surface search routines 2151
Jay S.DeNatale & Susan G.Gillett

15 *CAD, mesh generation, software*

Interactive modelling system for finite element applications in geomechanics 2159
B.Kröplin, C.Bremer & V.Bettzieche

The computer-aided analytical system for the geotechnical characterization problems 2165
J.L.Meek & S.Akutagawa

A practical application of MAKEBASE: An information retrieval system for structural mechanics – Examples of information management in geomechanics 2171
J.Mackerle

A case history of selecting and implementing a major CADD (computer-aided design and drafting) system 2177
D.W.Harris

Interactive graphic data generation and FEM analysis in geomechanics on workstations and personal computers 2185
W.Haas

A method and a program for mesh generation in geomechanics 2191
T.N.Hristov & V.H.Vassilev

SACI – A system for instrumentation control and follow-up 2197
Luiz C.S.Domingues, Sebastião M.Burin, Tarcísio B.Celestino, Carlos T.Mitsuse, Edmundo R.Esquivel, Oladivir A.Ferrari & Alberto P.Horta Neto

The automatic generation of the finite element mesh 2203
J.Bartůněk

Advertisements 2209
