

Ph.D. Dissertation

THE BEHAVIOUR OF SATURATED KAOLIN
IN THE
SIMPLE SHEAR APPARATUS

by

DANIEL LEON BORIN

A Dissertation submitted for the
Degree of Doctor of Philosophy
at the
University of Cambridge

Downing College

January 1973

TABLE OF CONTENTS

Summary
Preface
Table of Contents
Notation

	<u>Page</u>
CHAPTER 1 INTRODUCTION	i
1.1 General	1
1.2 Historical Survey	2
1.3 Development of the Simple Shear Apparatus	7
1.4 Outline of Present Work	9
CHAPTER 2 THE SIMPLE SHEAR APPARATUS MK 8	12
2.1 Design of the S.S.A. Mk 8	12
2.2 Description of the S.S.A. Mk 8	13
2.3 The Load Cells	16
2.4 The Latex Membranes	17
2.5 Facing Material for Top and Bottom Load Cells	18
2.6 The Motor Control Unit	20
CHAPTER 3 EXPERIMENTAL PROCEDURE	22
3.1 Assembly of the Apparatus and Preparation of the Sample	22
3.2 Test Procedure	23
3.3 Choice of Speed of Testing	25
3.4 Calculation of Stress and Strain Parameters	27
CHAPTER 4 PRESENTATION OF TEST RESULTS	31
4.1 Stress Distribution of the Boundaries of Samples	31
4.2 Stress and Strain Parameters	33
4.2.1 Choice of parameters	33
4.2.2 Accuracy of data from the S.S.A. Mk 8	35
4.3 Description of Tests in the S.S.A. Mk 8	37
4.3.1 General	37
4.3.2 Test 3	38
4.3.3 Test 4	39
4.3.4 Test 5	40
4.3.5 Test 6	41

	<u>Page</u>
4.3.6 Test 8	43
4.3.7 Test 9	45
4.3.8 Test 10	47
CHAPTER 5 DISCUSSION OF TEST RESULTS	49
5.1 One-dimensional Consolidation	49
5.2 Shear Tests	55
5.2.1 General discussion of drained and undrained tests	55
5.2.2 Anisotropic consolidation tests	62
5.3 Comparison with other S.S.A. Data	66
CHAPTER 6 DISCUSSION OF COMPLEX SHEAR TESTS AND THE STATE BOUNDARY SURFACE	68
6.1 The Two-dimensional Representation of State Paths	68
6.2 State Boundary Surfaces	69
6.3 Shear Tests on Normally Consolidated Samples	70
6.4 Cyclic Loading Tests	73
6.5 Reverse Shear Tests	74
6.6 Reconsolidation of Sheared Samples	76
CHAPTER 7 PRINCIPAL AXES OF STRESS, STRESS INCREMENT AND STRAIN INCREMENT	80
7.1 Uniformity of Stress and Strain	80
7.2 Principal Axes of Stress Increment	81
7.3 Rotation of Principal Axes During Shear	83
7.3.1 The three sets of principal axes	83
7.3.2 Rotation of principal axes during anisotropic consolidation	83
7.3.3 Rotation of axes during complex tests	85
7.4 Discussion of Anisotropic Consolidation Tests	88
7.5 Mechanisms of Deformation at Failure	89
7.6 Discussion of Complex Tests	92
CHAPTER 8 SOME THEORETICAL PREDICTIONS OF THE STRESS-STRAIN BEHAVIOUR OF NORMALLY CONSOLIDATED CLAY	95
8.1 Introduction	95
8.2 The Theory of Roscoe and Burland	95
8.2.1 Isotropic consolidation	95
8.2.2 Elastic and plastic strain	96

	<u>Page</u>
8.2.3 The rupture criterion	97
8.2.4 Yielding under combinations of hydrostatic and deviatoric loading	98
8.2.5 The elastic domain and the volumetric yield locus	99
8.2.6 Conditions of stable yielding	100
8.2.7 The undrained stress path	102
8.2.8 Shear strains beneath the volumetric yield locus	103
8.3 Predictions of the Theory of Roscoe and Burland	104
8.3.1 Undrained test data	104
8.3.2 Predictions of shear strain in a triaxial drained test	104
8.3.3 Application of the theory to simple shear tests	105
8.3.4 Rigorous application of the theory to simple shear tests	105
8.4 An Amendment to the Generalized Theory of Roscoe and Burland	109
8.5 Predictions of the Amended Theory	113
8.6 Conclusions	116
CHAPTER 9 CONCLUSIONS	117
9.1 The Apparatus	117
9.2 Experimental Data	118
9.3 One-dimensional Consolidation	118
9.4 Shear Properties of Kaolin in Plane Strain	119
9.4.1 Anisotropic consolidation	119
9.4.2 The failure criterion	120
9.4.3 The State Boundary Surface	121
9.5 Rotation of Principal Axes	122
9.6 Theoretical Predictions	123
9.7 Suggestions for Further Work	123
