PREFACE	XI
1 INTRODUCTION	1
1.1 Basic ideas and assumptions	1
1.1.1 Distinctive features of coastal waters	1
1.1.2 Classification of coastal water oscillations	2
1.1.3 Continuous fluid and water particle concepts	4
1.2 Kinematics of water particle	7
1.3 Dynamics of water particle	9
1.4 Conservation laws	14
1.5 References	22
2 SHORT SURFACE WAVES	25
2.1 General characteristics	25
2.2 Problem formulation for short waves ($\Pi \leq 0.30$ or $U \leq 75$)	27
2.3 First Stokes perturbation method	29
2.3.1 Nonlinear approximation	31
2.3.2 Small amplitude approximation	38
2.4 Second Stokes perturbation method	46
2.5 Analytical and numerical solution for steep waves	49
2.6 Validity of theoretical solutions	61
2.7 References	63
3 REFRACTION OF SHORT WAVES BY SLOWLY VARYING DEPTH	67
3.1 Geometrical optics approximation	67
3.2 Waves in neighbourhood of a straight caustic	73
3.3 Influence of bottom friction	78
3.4 Refraction - diffraction processes	81
3.5 Propagation of waves over underwater step and channels	95
3.6 Scattering of surface waves by periodic sandbars	108
3.7 References	112
4 LONG SURFACE WAVES	117
4.1 General remarks	117
4.2 Boussinesq solution ($O(\nu) = O(\delta^2)$). Solitary waves	118
4.3 Korteweg-de Vries equation. Cnoidal waves	124
4.4 Linearized long wave equation	134
4.5 Propagation of long waves over shoaling bottom	134
4.6 Edge waves	146
4.7 References	151

5	WAVE MODULATION AND BREAKING	157
5.1	Nonlinear modulation of surface waves in space and time	157
5.2	Wave breaking	161
5.2.1	Steep waves, approaching to breaking	161
5.2.2	Breaking wave mechanism	166
5.2.3	Evolution of waves after breaking	170
5.3	References	174
6	WIND-INDUCED WAVE STATISTICS	179
6.1	General remarks	179
6.2	Stress of wind on sea surface	180
6.3	Similarity laws for wind-generated waves	183
6.4	Statistical properties of the wind waves	185
6.4.1	Surface elevation	185
6.4.2	Wave height	189
6.4.3	Wave period	197
6.5	Wave groups in the coastal zone	201
6.6	Long-term statistics in the coastal zone	204
6.7	References	208
7	SPECTRAL PROPERTIES OF WIND WAVES	213
7.1	General remarks	213
7.2	Width of the energy spectra	215
7.3	Spectral models of wind waves on limited water depth	218
7.4	Evolution of spectral function over shoaling water depth	229
7.4.1	Transformation of wave spectra and statistical characteristics of waves	229
7.4.2	Wind waves in surf zone	238
7.5	References	243
8	CURRENTS IN COASTAL ZONE	249
8.1	Currents classification	249
8.2	Wind currents in coastal zone	250
8.3	Longshore currents induced by waves	253
8.3.1	Radiation stress concept	253
8.3.2	Longshore currents	258
8.4	Rip currents and coastal circulation	265
8.4.1	Averaging of the continuity and momentum equations	266
8.4.2	Modelling of the coastal circulation	269
8.5	Mass transport in shallow water	275
8.6	Tidal currents in coastal zone	279
8.6.1	Oceanic tides	279
8.6.2	Shallow water tides	280
8.7	Interactions of waves and currents	284
8.7.1	Waves on uniform currents	285
8.7.2	Waves on slowly varying currents	287
8.7.3	Waves on current varying in horizontal plane	289
8.7.4	Current velocity varying with depth	296
8.8	References	299

9 VARIATION OF SEA LEVEL	303
9.1 General remarks	303
9.2 Variation of mean water level due to waves	303
9.3 Variation of mean water level due to tides	308
9.4 Seiching	311
9.5 Storm surges in coastal zone	317
9.6 References	325
AUTHOR INDEX	329
SUBJECT INDEX	333
