Contents

<i>Preface</i>	ix
Chapter 1. Introduction	1
Chapter 2. Mechanical Properties of Rocks	5
2.1. Diagnostic tests	5
2.2. Unconfined uniaxial compressive tests	6
2.3. Other mechanical tests	10
2.4. Triaxial tests	12
Exercises	16
Chapter 3. Creep of Rocks	17
3.1. History of creep tests	17
3.2. Uniaxial creep	17
3.3. Mathematical model	19
3.4. Examples	22
3.5. Creep in triaxial stress-state	23
Exercises	25
Chapter 4. Volume Deformation	27
4.1. Dilatancy and/or compressibility	27
4.2. Volume compressibility	29
4.3. Mathematical models for the hydrostatic compressibility of volume	33
4.4. Volume dilatancy	40
4.5. Rock dilatancy during creep	45
Exercises	47
Chapter 5. Classical Constitutive Equations	49
5.1. The linear elastic model	49
5.2. Plane strain elasticity in cylindrical coordinates	58
5.3. Thick-walled tube subjected to internal and external pressures	63

5.4. The general linear viscoelastic model	66
Exercises	76
Chapter 6. Rock 'Elasticity' at High Pressures	78
6.1. The elastic moduli	78
6.2. Determination of elastic moduli by dynamic procedures	80
6.3. Longitudinal and shear waves in the case of high stresses and finite strains	85
6.4. Restrictions concerning the elastic parameters	88
Exercises	91
Chapter 7. Rock Plasticity	93
7.1. Historical outline	93
7.2. Constitutive hypotheses	95
7.3. Constitutive equation	98
7.4. Yield function and plastic potential	100
7.5. Example for a dilatant rock	104
7.6. Example of compressible/dilatant rock	105
7.7. Generalization of the model for finite rotations	110
Exercises	111
Chapter 8. Elastic/Viscoplastic Constitutive Equations	112
8.1. General considerations	112
8.2. Experimental foundation	115
8.3. Constitutive hypotheses	118
8.4. Constitutive equations	120
8.5. An example for a compressible/dilatant hard rock	126
8.6. Examples for softer rocks	135
8.7. A uniaxial example	141
8.8. Acoustic emission	145
Exercises	150
Chapter 9. Damage and Failure of Rocks	151
9.1. Classical short-time failure-strength criteria	151
9.2. Some experimental evidence	152
9.3. The energetic damage parameter	157
9.4. Numerical examples	161
Exercises	165
Chapter 10. Stress states <i>In-Situ</i>	166
10.1. Primary stress-state	166
10.2. Secondary and relative stress fields	170
10.3. Initial stresses and strains for the linear elastic model	171
10.4. Primary states for the elasto-plastic constitutive equation	172
10.5. Primary states for the linear viscoelastic model	173
10.6. Primary states for the elastic/viscoplastic model	174

10.7. Stresses and strains around underground openings	175
Exercises	176

Chapter 11. Creep and Dilatancy/Compressibility of Rocks Around Vertical Shafts and Oil Wells	177
11.1. Formulation of the problem	177
11.2. The linear elastic solution	178
11.3. The linear viscoelastic rock	182
11.4. The elastic/viscoplastic rock	184
11.5. Dilatancy/compressibility and damage around a well	191
11.6. A more general primary stress-state	194
Exercises	198

Chapter 12. Creep and Dilatancy/Compressibility of Rocks Around Horizontal Tunnels	199
12.1. Formulation of the problem	199
12.2. The elastic approach	202
12.3. Creep around a tunnel according to a linear viscoelastic model	208
12.4. Creep according to an elastic/viscoplastic model	217
12.5. Creep, dilatancy/compressibility, damage, and failure around a tunnel	221
Exercises	232

Chapter 13. Tunnel Support Analysis	234
13.1. Formulation of the problem	234
13.2. Linear elastic support; linear viscoelastic rock	236
13.3. Non-linear self-adjusting supports; linear viscoelastic rock	242
13.4. Non-linear self-adjusting support; elastic/viscoplastic rock	253
Exercises	268

Appendix 1. A Short Introduction to Fracture Mechanics	269
A1.1. Introduction	269
A1.2. The fundamental relations of the plane theory of elasticity	269
A1.3. Integral representation of the functions $\Phi(z)$ and $\Psi(z)$	273
A1.4. The main boundary-value problems	275
A1.5. The influence functions corresponding to the elementary crack	277
A1.6. The Griffith crack in the plane problem	280
A1.7. Stress intensity factors and criteria for the propagation of the crack	283
A1.8. Systems of rectilinear cracks	285
A1.9. Application to the crack kinking problem	287
A1.10. Some numerical and experimental results	289

Appendix 2. Creep and Stress Variation Around a Well or a Tunnel. A Numerical Approach	292
