Preface to third edition

Preface to first edition

Chapter 1	General principles and practices	1
	1.1 Function of piles	1
	1.2 Historical	1
	1.3 Calculations of load-carrying capacity	2
	1.4 Dynamic piling formulae	3
	1.5 Code of practice requirements	4
	1.6 Responsibilities of engineer and contractor	5
	1.7 References	6
Chapter 2	Types of pile	7
	2.1 Classification of piles	7
	2.2 Driven large displacement piles	9
	2.2.1 Timber piles	9
	2.2.2 Precast concrete piles	14
	2.2.3 Jointed precast concrete piles	23
	2.2.4 Steel piles	24
	2.2.5 Shoes for steel piles	33
	2.2.6 Working stresses for steel piles	36
	2.3 Driven-and-cast-in-place displacement piles	37
	2.3.1 General	37
	2.3.2 Withdrawable-tube types	37
	2.3.3 Shell types	39
	2.3.4 Working stresses on driven-and-cast-in-place piles	41
	2.4 Replacement piles	42
	2.4.1 General	42
	2.4.2 Bored-and-cast-in-place piles	44
	2.4.3 Drilled-in tubular piles	47
	2.5 Composite piles	48
	2.6 Factors governing choice of type of pile	48
	2.7 References	50
Chapter 3	Piling equipment and methods	51
	3.1 Equipment for driven piles	51
	3.1.1 Piling frames	51
	3.1.2 Crane supported (hanging) leaders	52
	3.1.3 Trestle guides	52
	3.1.4 Piling hammers	56
	3.1.5 Piling vibrators	64
	3.1.6 Selection of type of piling hammer	65
	3.1.7 Noise control in pile driving	68

3.1.8	Pile helmets and driving caps	71
3.1.9	Jetting piles	73
3.2	Equipment for installing driven-and-cast-in-place piles	74
3.3	Equipment for installing bored-and-cast-in-place piles	77
3.3.1	Power augers	77
3.3.2	Grabbing rigs with casing oscillators	80
3.3.3	Continuous flight auger drilling rigs	80
3.3.4	Reverse-circulation drilling rigs	80
3.3.5	Tripod rigs	82
3.3.6	Drilling for piles with bentonite slurry	84
3.4	Procedure in pile installation	86
3.4.1	Driving timber piles	86
3.4.2	Driving precast (including prestressed) concrete piles	86
3.4.3	Driving steel piles	87
3.4.4	Driving and concreting steel shell piles	88
3.4.5	The installation of withdrawable-tube types of driven-and-cast-in-place piles	88
3.4.6	The installation of bored-and-cast-in-place piles by power auger equipment	88
3.4.7	Concreting pile shafts under water	92
3.4.8	The installation of bored-and-cast-in-place piles by grabbing, vibratory and reverse-circulation rigs	93
3.4.9	The installation of bored-and-cast-in-place piles by tripod rigs	94
3.4.10	The installation of raking piles	94
3.4.11	Positional tolerances	95
3.5	Constructing piles in groups	95
3.6	References	96

Chapter 4 Calculating the resistance of piles to compressive loads

4.1	General considerations	97
4.1.1	The basic approach to the calculation of pile resistance	97
4.1.2	The behaviour of a pile under load	98
4.1.3	Definition of failure load	99
4.1.4	Allowable loads on piles	99
4.2	Piles in cohesive soils	100
4.2.1	Driven displacement piles	100
4.2.2	Driven-and-cast-in-place displacement piles	107
4.2.3	Bored-and-cast-in-place displacement piles	108
4.2.4	The effects of time on pile resistance in clays	109
4.3	Piles in cohesionless soil	110
4.3.1	General	110
4.3.2	Driven piles in cohesionless soils	115
4.3.3	Driven-and-cast-in-place piles in cohesionless soils	117
4.3.4	Bored-and-cast-in-place piles in cohesionless soils	117
4.3.5	The use of in-situ tests to predict the ultimate resistance of piles in cohesionless soils	118
4.3.6	Time effects for piles in cohesionless soils	122
4.4	Piles in soils intermediate between sands and clays	122
4.5	Piles in layered cohesive and cohesionless soils	123
4.6	The settlement of the single pile at the working load for piles in soil	125
4.7	Piles bearing on rock	129
4.7.1	Driven piles	129
4.7.2	Driven-and-cast-in-place piles	133
4.7.3	Bored-and-cast-in-place piles	134
4.7.4	The settlement of the single pile at the working load for piles in rocks	136
4.8	Piles in fill – negative skin friction	137
4.8.1	Estimating negative skin friction	137

4.8.2	Safety factors for negative skin friction	140
4.8.3	Minimizing negative skin friction	140
4.9	References	141
4.10	Worked examples	142
Chapter 5	Pile groups under compressive loading	153
5.1	Group action in piled foundations	153
5.2	Pile groups in cohesive soils	155
5.2.1	Ultimate bearing capacity	155
5.2.2	Settlement	156
5.3	Pile groups in cohesionless soils	165
5.4	Deep pile groups in cohesive and cohesionless soils	169
5.5	Pile groups terminating in rock	170
5.6	Pile groups in filled ground	173
5.7	Effects on pile groups of installation methods	174
5.8	Precautions against heave effects in pile groups	176
5.9	Pile groups beneath basements	177
5.10	The optimization of pile groups to reduce differential settlements in clay	180
5.11	References	182
5.12	Worked examples	183
Chapter 6	The design of piled foundations to resist uplift and lateral loading	192
6.1	The occurrence of uplift and lateral loading	192
6.2	Uplift resistance of piles	194
6.2.1	General	194
6.2.2	The uplift resistance of friction piles	194
6.2.3	Piles with base enlargements	196
6.2.4	Anchoring piles to rock	198
6.2.5	The uplift resistance of drilled-in rock anchors	199
6.3	Single vertical piles subjected to lateral loads	205
6.3.1	Calculating the ultimate resistance to lateral loads	207
6.3.2	Bending and buckling of partly embedded single vertical piles	215
6.3.3	The deflection of vertical piles carrying lateral loads	216
6.3.4	Elastic analysis of laterally-loaded vertical piles	219
6.3.5	The use of p-y curves	225
6.3.6	Effect of method of pile installation on behaviour under lateral loads and moments applied to pile head	230
6.3.7	The use of pressuremeter test to establish p-y curves	230
6.4	Lateral loads on raking piles	233
6.5	Lateral loads on groups of piles	234
6.6	Effects of adjacent surcharge loading on pile groups	236
6.7	References	239
6.8	Worked examples	240
Chapter 7	The structural design of piles and pile groups	254
7.1	General design requirements	254
7.2	Designing reinforced concrete piles for lifting after fabrication	254
7.3	Designing piles to resist driving stresses	257
7.4	The effects of bending on piles below ground level	259
7.5	The design of axially-loaded piles as columns	260
7.6	Lengthening piles	260
7.7	Bonding piles with caps and ground beams	261
7.8	The design of pile caps	263
7.9	The design of pile capping beams and connecting ground beams	265
7.10	References	270
7.11	Worked examples	270

Chapter 8	Piling for marine structures	280
8.1	Berthing structures and jetties	280
8.1.1	Loading on piles from berthing impact forces	281
8.1.2	Mooring forces on piles	286
8.1.3	Wave forces on piles	287
8.1.4	Current forces on piles	290
8.1.5	Wind forces on piles	292
8.1.6	Forces on piles from floating ice	292
8.1.7	Materials for piles in jetties and dolphins	293
8.2	Fixed offshore platforms	293
8.2.1	General design philosophy	293
8.2.2	Ship berthing and mooring forces	296
8.2.3	Wave forces	296
8.2.4	Current forces	296
8.2.5	Wind forces	297
8.2.6	Floating and sheet ice	297
8.2.7	Earthquakes	298
8.2.8	Pile design for jacket-type structures	298
8.3	References	303
8.4	Worked examples	303
Chapter 9	Miscellaneous piling problems	313
9.1	Piling for machinery foundations	313
9.1.1	General principles	313
9.1.2	Pile design for static machinery loading	314
9.1.3	Pile design for dynamic loading from machinery	314
9.2	Piling for underpinning	315
9.2.1	Requirements for underpinning	315
9.2.2	Piling methods in underpinning work	315
9.3	Piling in mining subsidence areas	322
9.4	Piling in frozen ground	325
9.4.1	General effects	325
9.4.2	The effects of adfreezing on piled foundations	325
9.4.3	Piling in permafrost regions	326
9.5	References	327
Chapter 10	The durability of piled foundations	328
10.1	General	328
10.2	Durability and protection of timber piles	328
10.2.1	Timber piles in land structures	328
10.2.2	Timber piles in river and marine structures	332
10.3	Durability and protection of concrete piles	336
10.3.1	Concrete piles in land structures	336
10.3.2	Concrete piles in marine structures	339
10.4	Durability and protection of steel piles	340
10.4.1	Steel piles for land structures	340
10.4.2	Steel piles for marine structures	341
10.5	References	343
Chapter 11	Site investigations, piling contracts, pile testing	344
11.1	Site investigations	344
11.1.1	Planning the investigation	344
11.1.2	Boring in soil	345
11.1.3	Drilling in rock	346
11.1.4	In-situ testing in soils and rocks	347
11.2	Piling contracts and specifications	350
11.2.1	Contract procedure	350
11.2.2	Piling specifications	352
11.3	Control of pile installation	353
11.3.1	Driven piles	353

11.3.2 Driven-and-cast-in-place piles	356
11.3.3 Bored-and-cast-in place piles	356
11.4 Load testing of piles	356
11.4.1 Compression tests	356
11.4.2 Interpretation of compression test records	362
11.4.3 Uplift tests	366
11.4.4 Lateral loading tests	367
11.5 Tests for the structural integrity of piles	369
11.6 References	369
Appendix Properties of materials	371
1. Cohesionless soils	371
2. Cohesive and organic soils	371
3. Rocks and other materials	372
Name index	373
Subject index	375
