CONTENTS

Preface	v
<i>Chapter 1 INTRODUCTION</i>	
1.1 Introduction	1
1.2 A short historical review of soil plasticity	4
1.3 Idealized stress-strain relations for soil	7
1.3.1 Hardening (softening) rules	8
1.3.2 Perfect plasticity models	9
1.4 Limit analysis for collapse load	9
1.5 Finite-element analysis for progressive failure behavior of soil mass	12
1.5.1 Flexible and smooth strip footings	12
1.5.2 Rigid and rough strip footings	19
1.5.3 Summary remarks	23
References	24
<i>Chapter 2 BASIC CONCEPTS OF LIMIT ANALYSIS</i>	
2.1 Introduction	27
2.2 Index notation	28
2.3 The perfectly plastic assumption and yield criterion	29
2.4 The kinematic assumption on soil deformations and flow rule	31
2.5 The stability postulate of Drucker	32
2.6 Restrictions imposed by Drucker's stability postulate – convexity and normality	35
2.7 The assumption of small change in geometry and the equation of virtual work	36
2.8 Theorems of limit analysis	38
2.9 Limit theorems for materials with non-associated flow rules	42
2.10 The upper-bound method	45
2.11 The lower-bound method	57
References	60
<i>Chapter 3 VALIDITY OF LIMIT ANALYSIS IN APPLICATION TO SOILS</i>	
3.1 Introduction	61
3.2 Soil – a multiphase material	61
3.3 Mechanical behaviour of soils	66
3.4 Soil failure surfaces	72
3.4.1 Tresca criterion (one-parameter model)	78
3.4.2 von Mises criterion (one-parameter model)	79
3.4.3 Lade-Duncan criterion (one-parameter model)	80
3.4.4 Mohr-Coulomb criterion (two-parameter model)	83

3.4.5	Drucker-Prager criterion (two-parameter model)	86
3.4.6	Lade criterion (two-parameter model)	90
3.4.7	Summary of soil failure criteria	92
3.5	Validity of limit analysis in application to soils	92
3.5.1	Basic assumptions	92
3.5.2	Normality condition for 'undrained' purely cohesive soils	95
3.5.3	Normality condition for cohesionless soils	96
3.6	Friction-dilatation and related energy in cohesionless soils	97
3.6.1	Friction and dilatation	97
3.6.2	Energy considerations	98
3.6.3	A descriptive example of a $c-\phi$ soil following non-associated flow rule	101
3.7	Effect of friction on the applicability of limit analysis to soils	103
3.8	Some aspects of retaining wall problems and the associated phenomena at failure	105
	References	108

Chapter 4 LATERAL EARTH PRESSURE PROBLEMS

4.1	Introduction	111
4.2	Failure mechanism	111
4.3	Energy dissipation	115
4.3.1	Internal energy dissipation	115
4.3.2	Interface energy dissipation	115
4.4	Passive earth pressure analysis	118
4.5	Active earth pressure analysis	122
4.6	Comparisons and discussions	124
4.6.1	Comparisons with slip-line, zero-extension line, and Coulomb limit equilibrium solutions	125
4.6.2	Comparison with Caquot and Kerisel's method (vertical wall and horizontal backfill)	128
4.6.3	Comparison with Caquot and Kerisel's and Lee and Herington's methods (general soil-wall system)	129
4.6.4	Effect of pure-friction idealization of interface material	132
4.7	Some practical aspects	133
4.7.1	Loading and strain conditions	133
4.7.2	Soil-structure interface friction	138
4.7.3	Progressive failure and scale effect	139
4.7.4	Cohesion and surcharge effects	143
	References	146

Chapter 5 RIGID RETAINING WALLS SUBJECTED TO EARTHQUAKE FORCES

5.1	Introduction	147
5.2	General considerations	149
5.3	Seismic passive earth pressure analysis	150
5.3.1	Calculations of incremental external work	151
5.3.2	Calculations of incremental internal energy dissipation	152
5.4	Seismic active earth pressure analysis	155
5.5	Numerical results and discussions	156
5.5.1	Comparison with Mononobe-Okabe solution	157
5.5.2	Some parametric studies	160

5.5.3	Surcharge and cohesion effects	170
5.5.4	Seismic effects on potential sliding surface	177
5.5.5	General remarks	181
5.6	Earth pressure tables for practical use	181
5.6.1	Correction for direction of seismic acceleration	182
5.6.2	Correction for the presence of surcharge	185
5.6.3	Correction for presence of cohesion	192
5.6.4	Correlation for mixed effects from acceleration direction, surcharge and cohesion	195
	References	197
	Appendix A: Seismic earth pressure tables for K_A and K_p	198
	Appendix B: Earth pressure tables for N_{AC} and N_{PC}	223

*Chapter 6 SOME PRACTICAL CONSIDERATIONS IN DESIGN OF RIGID
RETAINING STRUCTURES*

6.1	Introduction	231
6.2	Theoretical considerations of the modified Dubrova method	232
6.2.1	Dependence of strength mobilization on wall movement	234
6.2.2	Formulation of the modified Dubrova method	234
6.2.3	Distribution of mobilized strength parameters	238
6.2.4	Resultant lateral pressure and point of action	245
6.3	Some numerical results and discussions of the modified Dubrova method	246
6.3.1	Effects of distribution of mobilized strength parameter on calculated lateral earth pressure	246
6.3.2	Pressure distributions at different stages of wall yielding	253
6.3.3	Point of action for static conditions	259
6.3.4	Point of action for earthquake condition	266
6.3.5	Effects of strength parameters and geometry of soil-wall system on point of action	275
6.4	Evaluation of the modified Dubrova method	278
6.4.1	Basic assumptions of the modified Dubrova method	279
6.4.2	Failure mechanisms for free-standing rigid retaining walls	280
6.4.3	Characteristics of the modified Dubrova method	281
6.4.4	Validity of the modified Dubrova method in practical applications	282
6.5	Effects of wall movement on lateral earth pressures	285
6.5.1	Effects of wall movement on static and seismic active earth pressures	285
6.5.2	Effects of wall movement on static and seismic passive earth pressures	287
6.6	Earth pressure theories for design applications in seismic environments	292
6.6.1	Analytical methods for determining seismic active earth pressure	293
6.6.2	Analytical methods for determining seismic passive earth pressure	300
6.7	Design recommendations	305
	References	307

*Chapter 7 BEARING CAPACITY OF STRIP FOOTING ON ANISOTROPIC AND
NONHOMOGENEOUS SOILS*

7.1	Introduction	309
7.2	Analysis	310
7.3	Results and discussions	316
	References	323

Chapter 8 EARTHQUAKE-INDUCED SLOPE FAILURE AND LANDSLIDES

8.1	Introduction	325
8.2	Failure surface	328
8.3	Determination of the critical height for seismic stability	337
8.3.1	The critical height of toe-spiral	340
8.3.2	Earthslopes of purely cohesive soil	351
8.3.3	Physical ranges and constraints	352
8.4	Special spiral-slope configurations	357
8.4.1	Sagging spiral	357
8.4.2	Raised spiral	361
8.4.3	Stretched spiral	365
8.4.4	The most critical slip surface for a given earthslope	366
8.5	Calculated results and discussions	367
8.5.1	Static case	367
8.5.2	Cases of constant and linear pseudo-seismic profiles	371
8.5.3	Cases of nonlinear pseudo-seismic profiles	372
8.6	Concluding remarks	377
	References	379

*Chapter 9 SEISMIC STABILITY OF SLOPES IN NONHOMOGENEOUS,
ANISOTROPIC SOILS AND GENERAL DISCUSSIONS*

9.1	Introduction	381
9.2	Log-spiral failure mechanism for a nonhomogeneous and anisotropic slope	382
9.3	Numerical results and discussions	388
9.3.1	Calculated results	388
9.3.2	General remarks	391
9.4	Mechanics of earthquake-induced slope failure	394
9.4.1	Dynamic shearing resistance of soils	397
9.4.2	Seismic coefficient	399
9.4.3	Rigid-plastic analysis	400
	References	403

Chapter 10 ASSESSMENT OF SEISMIC DISPLACEMENT OF SLOPES

10.1	Introduction	405
10.2	Failure mechanisms and yield acceleration	406
10.2.1	Infinite slope failure	407
10.2.2	Plane failure mechanism of local slope failure	408
10.2.3	Log-spiral failure mechanism of local slope failure	410
10.3	Assessment of seismic displacement of slopes	415
10.3.1	General description	415
10.3.2	Numerical procedure	416
10.3.3	Numerical results	425
10.4	Summary	427
	References	429
	Appendix 1: Plane failure surface	429
	Appendix 2: Logspiral failure surface	431
	Appendix 3: Limit analysis during earthquake	433

Chapter 11 STABILITY ANALYSIS OF SLOPES WITH GENERALIZED FAILURE CRITERION

11.1 Introduction	437
11.2 Variational approach in limit analysis and the combined method	438
11.3 Stability analysis of slopes	447
11.3.1 The solution procedure for the bearing capacity of a strip footing on the upper surface of a slope	447
11.3.2 The solution procedure for the critical height of slopes	449
11.3.3 Numerical results	449
11.4 Layered analysis of embankments	456
11.5 Summary	468
References	469
Subject index	471
Author index	475
