1	Introduction	1
Part A		
Conceptual Models		5
2	Models of the Grain and Rock Mass Fabrics	7
2.1	General	7
2.2	Formation of Rocks	7
2.3	Grain Fabric of Intact Rocks	17
2.4	Rock Mass Fabric	30
2.5	Description of the Rock Mass Fabric	38
2.6	Model of the Rock Mass Fabric	41
3	Model of the Stress-Strain Behaviour of Rock Masses	42
3.1	General	42
3.2	Stress-Strain Behaviour of Intact Rock	43
3.2.1	Elastic behaviour	43
3.2.2	Intact rock strength	64
3.2.3	Viscoplastic behaviour	74
3.3	Discontinuities	87
3.3.1	Influence of a discontinuity on stresses and deformations before failure	87
3.3.2	Strength of discontinuities	97
3.3.3	Flow rule for post-failure behaviour of discontinuities	107
3.4	Rock Mass	112
3.4.1	Description of the stress-strain behaviour of a rock mass using a discrete model	112
3.4.2	Homogeneous model	118
3.4.3	Pseudo-discrete treatment of discontinuity families taking into account shearing and dilatancy behaviour	153
3.5	Stability Problems	156
3.6	Observations Concerning the Idealisation of Stress-Strain Behaviour and Refined Conceptual Models	158

3.6.1	Time-dependence and derivations from linearity in stress-strain behaviour under loading below strength	158
3.6.2	Critical state model	165
4	Basis for the Consideration of Deformations due to Swelling	171
4.1	General	171
4.2	Transformation of Anhydrite into Gypsum	172
4.3	Swelling of Corrensite	173
4.4	Disintegration of Intact Rock	174
4.5	Model of the Stress-Strain Relationship	176
5	Conceptual Model of Seepage Flow through a Rock Mass	182
5.1	General	182
5.2	Flow in Discontinuities	183
5.2.1	Basic equation for steady flow of incompressible viscous liquids	183
5.2.2	Two-dimensional laminar irrotational flow in a fissure	186
5.2.3	Two-dimensional seepage flow in a fissure filled with soil	190
5.2.4	One-dimensional fissure flow	191
5.2.5	Pipe flow	199
5.2.6	Application of the laws for fissure and pipe flow to flow through discontinuities	201
5.3	Permeability of the Discontinuity Fabric	213
5.3.1	Discrete model	213
5.3.2	Homogeneous model, Darcy's law	219
5.4	Consideration of the Intact Rock's Permeability	234
5.5	Seepage Pressure and Hydrostatic Uplift	236
5.6	Combination with the Structural Models of the Rock Mass	241
Part B	Analysis Procedures	247
6	Computation of Stresses and Strains in a Rock Mass Using the Finite Element Method	249
6.1	General	249
6.2	Discretization of the Computation Section	252
6.2.1	Geometry of the isoparametric three-dimensional element	252
6.2.2	Further element types	261
6.2.3	Semi-automatic generation and perspective illustration of element meshes	264
6.3	Setting up of a Linear System of Equations for the Nodal Point Displacements in the Case of Linear Elastic Behaviour	265
6.3.1	Solution for displacements in an isoparametric three-dimensional element	265

6.3.2	Presentation of the strains and stresses in the isoparametric element in terms of the nodal point displacements	271
6.3.3	Derivation of the relationship between the nodal point displacements and the nodal forces in an isoparametric three-dimensional element	275
6.3.4	Numerical computation of the element stiffness matrix	278
6.3.5	Numerical computation of the load vector	285
6.3.6	Relationship between the nodal point displacements and the nodal forces of the rod and spring elements	286
6.3.7	Derivation of a relationship between nodal point displacements and nodal forces in the overall system.....	290
6.4	Introduction of the Boundary Conditions	291
6.5	Solution of the System of Equations	294
6.6	Treatment of the Stages of Construction	296
6.7	Treatment of Viscoplastic Behaviour	299
6.8	Program System FEST 03	312
6.8.1	General	312
6.8.2	Program procedure	313
6.8.3	Economy	315
7	Consideration of Stresses and Deformations due to Swelling in Finite Element Analyses	318
7.1	Illustration of the Causes of Swelling during the Construction of a Tunnel ..	318
7.2	Calculation of the Stresses and Deformations Caused by Swelling	320
8	Analysis of Rock Mass Wedge Stability	323
8.1	Introduction	323
8.2	Translation and Rotation of Rock Mass Wedges	324
8.2.1	Kinematics	324
8.2.2	Influence of geometry and loading on wedge movements	334
8.3	Two-dimensional Problems	340
8.3.1	Sliding over one discontinuity	340
8.3.2	Rotation about a variable axis	343
8.4	Three-dimensional Problems of Rock Mass Wedges Supported by Two Discontinuities	347
8.4.1	General	347
8.4.2	Analytical solution	347
8.4.3	Solution with the aid of nomograms	362
8.4.4	Graphical solution	365
8.5	Three-dimensional Problems of Rock Mass Wedges Supported by Three Discontinuities According to Londe	374

9	Analysis of Seepage Flow in a Rock Mass Using the Discrete Model	377
9.1	General	377
9.2	Two-dimensional Problems	377
9.2.1	Analytical solution assuming laminar flow	377
9.2.2	Analytical solution for partially turbulent flow	382
9.3	Three-dimensional Problems	384
10	Analysis of Three-dimensional Seepage Flow in a Rock Mass Using the Homogeneous Model and the Finite Element Method	387
10.1	General	387
10.2	Discretization of the Computation Section	387
10.3	Setting up a System of Linear Equations for the Piezometric Head at Nodal Points	388
10.4	Consideration of Boundary Conditions	394
10.4.1	Overview of possible boundary conditions	394
10.4.2	Stipulation of known piezometric heads at nodes on boundary surfaces or at individual nodes	396
10.4.3	Free surface	397
10.4.4	Seepage surface	400
10.5	Pseudo-three-dimensional Seepage Flow Problems	404
10.6	Determining Unknown Piezometric Heads and Computation of Further Parameters	410
10.6.1	Solution of the System of Equations	410
10.6.2	Computation of the gradients, seepage velocity and forces due to uplift and seepage	411
10.7	Structure of the Computer Program HYD 03	412
Part C	Application of Analysis Procedures	415
11	Traffic Tunnels and Adits	417
11.1	General	417
11.2	Execution and Evaluation of Analyses	418
11.2.1	Two-dimensional and pseudo-three-dimensional analyses of vertical rock mass slices	418
11.2.2	Simulation of tunnel driving	444
11.3	Tunnels in an Isotropic, Elastic Rock Mass	455
11.3.1	Comparison of results from two and three-dimensional analyses	455
11.3.2	Parametric studies	459
11.4	Tunnels in a Homogeneous, Transversely Isotropic Rock Mass	465
11.5	Tunnels in Yielding Rock	472

11.6	Stages of Construction	481
11.6.1	General	481
11.6.2	Stability analysis of advanced vault excavations	481
11.6.3	Stability analyses of a road tunnel with two tubes separated by a reinforced concrete pier	488
11.6.4	Loading of the inner lining	493
11.7	Parametric Studies into the Loading of the Inner Lining of Tunnels in a Swelling Rock Mass	496
12	Caverns	504
12.1	General	504
12.2	Influence of the Diameter of Circular Cross-Sections	504
12.3	Influence of the Stages of Construction and the In-situ Stresses	508
12.4	Influence of the Dimensions of Dome-shaped Caverns	513
12.5	Non-elastic Behaviour	517
12.6	General Advice	523
13	Pressure Tunnels	524
13.1	General	524
13.2	Analysis Procedures	525
13.3	Investigated Cases	526
14	Foundations of Gravity and Arch Dams	534
14.1	General	534
14.2	Gravity Dams: Influence of Rock Mass Permeability on the Stresses and Deformations in the Rock Foundation	539
14.2.1	Details of problem	539
14.2.2	Underflow	541
14.2.3	Stresses and deformations in the rock mass	545
14.3	Arch Dams: Stresses and Deformations in the Rock Foundation and the Influence of the Cut-off's Slope	547
14.3.1	Introduction	547
14.3.2	Investigation of a "typical" arch dam	548
14.3.3	Investigations into the failure of the Malpasset Dam on the River Reyran north of Frejus	556
14.3.4	Stability analyses for the Ernstbach Dam to the west of Wiesbaden	562
15	Slopes	567
15.1	General	567
15.2	Stability Analyses According to the Finite Element Method	567
15.2.1	Homogeneous, isotropic rock mass with and without discontinuities	567

15.2.2	Homogeneous, transversely isotropic rock mass	575
15.3	Seepage Flow Analyses	581
15.3.1	Seepage flow through a slope containing layers of low permeability	581
15.3.2	Influence of a fault with low permeability	582
15.3.3	Influence of anisotropic rock mass permeability	584

Part D Rock Mechanics Investigations 587

16	Introduction	589
17 *	Site Investigation	591
17.1	Existing Documentation	591
17.2	Exploration Points at the Ground Surface	594
17.2.1	General	594
17.2.2	Measurement of a discontinuity's orientation with the Clar compass	596
17.2.3	Recording the profile of discontinuity walls	599
17.2.4	Example of the mapping of a slope	601
17.3	Exploration Pits	603
17.4	Boreholes	604
17.4.1	General	604
17.4.2	Core drilling	605
17.4.3	Extraction of undisturbed cores	613
17.4.4	Observation of borehole walls	616
17.4.5	Stability and control of borehole direction	618
17.5	Exploration Adits and Shafts	620
17.6	Test and Part Excavations	624
17.7	Evaluation of Mappings with Regard to Measured Orientations	626
17.7.1	General	626
17.7.2	Hemispherical projection	626
17.7.3	Illustration of a discontinuity's orientation in a polar equal-area net	629
17.7.4	Illustration of a linear's orientation in a polar equal-area net	631
17.7.5	Angle between two discontinuities of differing orientation	632
17.7.6	Grouping of discontinuities into families on the basis of the Schmidt contour diagram	633
17.7.7	Mean orientation and the distribution of orientation in a family of discontinuities	637
17.7.8	Observation of representative sampling	639
17.8	Evaluation of Mappings with Regard to Discontinuity Spacing	641
17.8.1	General	641
17.8.2	Measurement methods	642
17.8.3	Statistical evaluation of spacing measurements	645

17.9	Evaluation of Mapping with Regard to the Persistence of Discontinuities	647
17.9.1	General	647
17.9.2	Statistical evaluation of trace length measurements	648
17.10	Model of the Rock Mass Fabric	649
17.11	Examples	650
17.11.1	Construction pit in slate for a powerhouse	650
17.11.2	Drilling programme for a road tunnel in carboniferous sandstone	666
18	Laboratory Tests on Intact Rock Samples	673
18.1	General	673
18.2	Petrographic Investigations	674
18.3	Density and Porosity	675
18.4	Water Content	677
18.5	Deformability	678
18.6	Uniaxial Compressive Strength	685
18.7	Strength under Multi-axial Loading	690
18.8	Tensile Strength	693
18.9	Resistance to Disintegration	696
18.10	Examples	697
18.10.1	General	697
18.10.2	Results of laboratory tests on sandstone specimens from the "Stubensandstein" stage near Stuttgart	698
18.10.3	Results of laboratory tests on slate specimens from Ernstbachtal near Wiesbaden	699
19	Shear Tests on Discontinuities	704
19.1	General	704
19.2	In-situ Direct Shear Test	706
19.2.1	General	706
19.2.2	Preparation of the test specimen	707
19.2.3	Test equipment	709
19.2.4	Test procedure	713
19.2.5	Test evaluation	715
19.2.6	Examples	716
19.3	Direct Shear Test with Portable Shearing Equipment	720
19.4	Direct Shear Test in the Laboratory	722
19.4.1	General	722
19.4.2	Specimen extraction	724
19.4.3	Test equipment	724
19.4.4	Test procedure	726
19.5	Triaxial Shear Test in the Laboratory	727

20	Tests to Determine the Deformability of a Rock Mass	729
20.1	General	729
20.2	Borehole Expansion Tests	730
20.2.1	Classification of borehole expansion tests according to their mode of loading and measuring equipment	730
20.2.2	Test procedure	734
20.2.3	General considerations regarding test evaluation	736
20.2.4	Evaluation of dilatometer tests with direct measuring equipment	740
20.2.5	Evaluation of dilatometer tests with indirect measuring equipment	747
20.2.6	Evaluation of borehole jacking tests	748
20.3	Flat Jack Tests	750
20.3.1	General	750
20.3.2	Test preparations	751
20.3.3	Test procedure.....	753
20.3.4	Test evaluation	754
20.3.5	Some characteristic results of flat jack tests	767
20.4	In-situ Biaxial Flat Jack Tests	778
20.5	In-situ Triaxial Tests	789
20.6	Plate Bearing Tests	795
20.7	Radial Jacking and Water Chamber Tests.....	798
21	In-situ Stresses	799
21.1	General	799
21.2	Influences on the In-situ State of Stress	804
21.2.1	Dead weight when ground surface is horizontal	804
21.2.2	Influence of topography	805
21.2.3	Influence of preloading	808
21.2.4	Influence of tectonic loading	811
21.3	Procedures for Measuring Stress Relief in Boreholes	812
21.3.1	Triaxial cell	812
21.3.2	"Doorstopper"	823
21.3.3	Borehole deformation probe	827
21.4	Slot Unloading	831
21.5	Borehole Deepening	834
22	Measurement and Interpretation of Deformations and Stresses Caused by Excavation	836
22.1	General	836
22.2	Measurement Procedures	838
22.2.1	Deformation measurements in boreholes parallel to the borehole axis.....	838
22.2.2	Deformation measurements in boreholes perpendicular to the borehole axis ..	844
22.2.3	Deformation measurements at convergence measuring cross-sections	847

22.2.4	Geodetic deformation measurements	850
22.2.5	Stress measurements in an opening's lining	850
22.2.6	Measurement of anchor forces	853
22.2.7	Design of measurement programme	854
22.3	Interpretation of Deformations Due to Excavation as Illustrated by Advanced Vault Driving for a Two-track Railway Tunnel in an Isotropic, Elastic Rock Mass	855
22.3.1	Preliminary consideration of a weightless rock slice with a circular hole	855
22.3.2	Details of problem	861
22.3.3	Three-dimensional analysis of deformations caused by driving in various states of rock mass loading	865
22.3.4	Generalizing the analysis results	875
22.3.5	Diagrams to determine the rock mass modulus and in-situ state of stress from measured deformations	877
22.3.6	Example of the application of the diagrams	888
23	Groundwater Conditions and Permeability	891
23.1	General	891
23.2	Groundwater Observation	893
23.3	Determining Permeability Using ISM Cores	895
23.4	Determining Permeability in the Lugeon Test	896
23.4.1	Principle of test	896
23.4.2	Sealing of injection section	900
23.4.3	Pressure in injection section	901
23.4.4	Measurement of discharge	905
23.4.5	Theory for the propagation of water in discontinuities intersected by a borehole	905
23.4.6	Opening and erosion of discontinuities during the Lugeon test	913
23.4.7	Evaluation of Lugeon tests	918
23.5	Other Methods to Determine the Permeability of a Rock Mass	921
24	Examples of Rock Mechanics Investigations	923
24.1	General	923
24.2	The Mingtan Pumped Storage Scheme	924
24.2.1	Project	924
24.2.2	Geological and rock mechanics conditions	924
24.2.3	Rock mechanics model	928
24.2.4	Elastic constants of the alternating sequence	932
24.2.5	In-situ stress measurements	935
24.2.6	Computation of the in-situ stresses	936
24.2.7	Deformations caused by driving	940
24.2.8	Interpretation of the measured deformations caused by driving	941

24.3	Altmühl Trans-Mountain Water Diversion	945
24.3.1	Project	945
24.3.2	Bedrock	946
24.3.3	Rock mass fabric and rock mechanics parameters	947
24.3.4	Driving and support of test tunnel	948
24.3.5	Measurement programme and results	950
24.3.6	Interpretation of the measurement results	953
Part E		
Design and Construction of Engineering Structures in Rock: Examples		957
25	General	959
26	Stuttgart Rapid-Transit Railway, Hasenberg Tunnel, Contract Section 15	961
26.1	Project	961
26.2	Preliminary Investigations	963
26.3	Support of Construction Pit Wall for University Station, Contract Section 15 ..	968
26.4	Measurement Programme and Results	971
26.5	Interpretation of the Measured Deformations	973
26.6	Conclusions	976
27	Wehr Powerhouse Cavern	978
27.1	Project	978
27.2	Preliminary Investigations	979
27.2.1	Exploration points	979
27.2.2	Intact rock types and rock mass fabric	980
27.2.3	Rock mechanics tests	983
27.3	Rock Mechanics Parameters	984
27.4	Stability Analyses	985
27.5	Rock Mass Excavation and Support	988
27.6	Measurements During Construction	989
27.7	Conclusions	993
28	Estangento-Sallente Powerhouse Cavern	995
28.1	Project	995
28.2	Preliminary Investigations	997
28.2.1	Exploration	997
28.2.2	Rock types in the area of the powerhouse	998
28.2.3	Discontinuities	999
28.2.4	Rock mechanics parameters and in-situ stresses	1001
28.2.5	Location of the powerhouse cavern	1003

28.3	Stability Analyses	1004
28.4	Excavation and Monitoring of Vault	1006
28.5	Excavation of Benches, Support of Walls, Monitoring and Interpretation	1008
28.5.1	Stability of the walls	1008
28.5.2	Cavern support	1012
28.5.3	Monitoring	1015
28.5.4	Interpretation and prediction	1022
28.6	Conclusions	1027
Appendix A Fundamentals of Vector and Matrix Algebra		1036
1	Vectors	1029
2	Matrices	1031
3	Determinants	1034
Appendix B Fundamentals of Probability Theory and Statistics		1036
1	Density function and frequency distribution	1036
2	Distribution function	1037
3	Mean value and scatter	1038
4	Normal distributions of x , x^{-1} and $\log x$	1039
5	Uniform distribution	1041
6	Exponential distribution	1041
7	Beta distribution	1042
8	Two-dimensional (or bivariate) distribution	1043
