

Handbook of Soil Mechanics

Volume 1

Soil Physics

by

Árpád Kézdi

Member of the Hungarian Academy of Sciences
Professor of Civil Engineering
Technical University of Budapest

Elsevier Scientific Publishing Company

Amsterdam · Oxford · New York 1974

Contents

| | | | |
|---|----|--|-----|
| Preface | 5 | Chapter 3. Soil structure | 67 |
| Introduction | 9 | 3.1 Introduction | 67 |
| Scope, aims and methods of soil mechanics | 9 | 3.2 Structure of gravels and sands | 67 |
| Historical background | 11 | 3.3 Properties of fine soil particles | 72 |
| The main problems of soil mechanics | 14 | 3.3.1 Elementary particles and structure of atoms | 72 |
| Recommended reading | 17 | 3.3.2 Structure of clay minerals | 75 |
| | | 3.3.3 Identification of clay minerals | 77 |
| Chapter 1. Origin of soils. Soil properties | 19 | 3.3.4 Surface activity of clay minerals | 79 |
| 1.1 Origin and formation of soils | 19 | 3.3.5 Forms of existence of soil water | 84 |
| 1.2 Physical properties of soils | 23 | 3.3.6 Gaseous phase in soil | 85 |
| Recommended reading | 24 | 3.4 Structure of cohesive soils | 86 |
| | | 3.4.1 Structure of clays | 86 |
| Chapter 2. Constituent parts of soils | 25 | 3.4.2 Structure of loess | 91 |
| 2.1 The solid part | 25 | 3.4.3 Structure of silt | 92 |
| 2.1.1 Size and shape of grains | 25 | 3.5 Organic constituent parts in soils | 92 |
| 2.1.2 Particle-size classification | 29 | 3.6 Harmful constituents in soils | 93 |
| 2.1.3 Unit weight of solid particles | 30 | Recommended reading | 95 |
| 2.1.4 Particle-size distribution of soils | 31 | | |
| 2.1.5 Analysis of grain-size distribution curve | 35 | Chapter 4. Classification of soils | 97 |
| 2.1.6 Typical grain-size distribution curves | 39 | 4.1 General considerations | 97 |
| 2.2 Water and air in soil | 41 | 4.2 Main soil types; their identification and nomenclature | 97 |
| 2.3 Phase composition of soils | 45 | 4.3 Soil classification based on grain size | 101 |
| 2.3.1 Relative volumes of constituent parts | 45 | 4.4 Soil classification based on consistency limits | 101 |
| 2.3.2 Natural moisture content of soils | 47 | 4.5 Soil classification standards | 103 |
| 2.3.3 Porosity and void ratio | 48 | Recommended reading | 108 |
| 2.3.4 Degree of saturation | 51 | | |
| 2.3.5 Unit weight of soil | 52 | Chapter 5. Stresses in soils | 109 |
| 2.3.6 Relative density and degree of compaction | 53 | 5.1 Effective and neutral stresses | 109 |
| 2.3.7 Examples | 55 | 5.2 Stresses in soil; steady flow of water | 113 |
| 2.4 Consistency limits | 58 | 5.3 Stresses in soils due to volume changes | 119 |
| 2.4.1 Consistency of soils | 58 | Recommended reading | 123 |
| 2.4.2 Liquid limit | 59 | | |
| 2.4.3 Plastic limit | 61 | Chapter 6. Flow of water in soil | 125 |
| 2.4.4 Shrinkage limit | 61 | 6.1 Introduction | 125 |
| 2.4.5 Examples | 62 | 6.2 Flow of water through soil due to gravity | 127 |
| 2.4.6 Consistency index | 63 | 6.2.1 Fundamentals | 127 |
| 2.4.7 Consistency and deformation of cohesive soils | 64 | 6.2.2 Measurement of permeability | 129 |
| Recommended reading | 66 | 6.2.3 Factors affecting permeability | 132 |

| | | | |
|---|-----|--|-----|
| 6.2.4 Numerical values of the coefficient of permeability | 136 | <i>Chapter 8. Deformation of soils</i> | 227 |
| 6.2.5 Permeability of partially saturated soils | 137 | 8.1 Introduction | 227 |
| 6.2.6 Permeability of stratified and anisotropic soils | 138 | 8.2 Deformations during confined compression | 229 |
| 6.2.7 The validity of Darcy's law | 139 | 8.2.1 Measurement of the compressibility of soil | 229 |
| 6.2.8 Examples | 141 | 8.2.2 Some characteristics of the compressibility of soils | 231 |
| 6.3 Two-dimensional potential flow | 144 | 8.3 Rheological properties of soils | 235 |
| 6.3.1 Derivation of fundamental equation | 144 | 8.4 Compression due to repeated loading | 240 |
| 6.3.2 Construction of flow nets | 148 | 8.5 Sudden compression (structural collapse) | 241 |
| 6.3.3 Two-dimensional flow through anisotropic soils | 151 | Recommended reading | 244 |
| 6.3.4 Numerical solution of the Laplace equation | 152 | <i>Chapter 9. Earth pressure problems</i> | 245 |
| 6.3.5 Numerical examples | 157 | 9.1 Introduction | 245 |
| 6.4 Capillary movement of water | 158 | 9.1.1 Definitions | 245 |
| 6.4.1 Basic concepts | 158 | 9.1.2 Methods to determine earth pressure | 247 |
| 6.4.2 Determination of the height of capillary rise | 161 | 9.1.3 Classification of granular media | 247 |
| 6.4.3 Rate of capillary rise | 162 | 9.2 Earth pressure at rest | 249 |
| 6.4.4 Variation of soil moisture in the field | 163 | 9.3 Limit states of equilibrium in the half space | 252 |
| 6.5 Drainage of saturated soils by gravity | 165 | 9.3.1 Horizontal surface; cohesionless material | 252 |
| 6.6 Movement of water in saturated soils due to loading (consolidation) | 167 | 9.3.2 Oblique surface; cohesionless material | 256 |
| 6.6.1 Basic concepts | 167 | 9.3.3 Cohesive material | 259 |
| 6.6.2 Theory of one-dimensional consolidation | 169 | 9.4 Retaining wall problems | 262 |
| 6.6.3 Computation of rate of consolidation | 173 | 9.4.1 Introduction | 262 |
| 6.6.4 Three-dimensional consolidation | 176 | 9.4.2 Active earth pressure of dry sand on gravity wall | 263 |
| 6.7 Movement of soil water due to electric current | 178 | 9.4.3 Effect of surcharge on the earth pressure | 271 |
| 6.8 Flow of water by heat action | 179 | 9.4.4 Use of curved slip surfaces | 274 |
| Recommended reading | 181 | 9.5 Pressure of cohesive soils | 277 |
| <i>Chapter 7. Soil strength</i> | 183 | 9.5.1 General considerations | 277 |
| 7.1 General discussion | 183 | 9.5.2 Active earth pressure of cohesive backfill | 278 |
| 7.2 Calculation of stresses | 184 | 9.6 Passive earth pressure | 281 |
| 7.3 Failure criteria | 187 | Recommended reading | 287 |
| 7.4 Physical causes of friction and cohesion | 190 | Author index | 289 |
| 7.5 Measurement of shearing strength | 192 | Subject index | 291 |
| 7.5.1 Testing methods | 192 | Contents of Vol. 2 | 293 |
| 7.5.2 Direct shear test | 194 | Contents of Vol. 3 | 293 |
| 7.5.3 Unconfined compression test | 195 | Contents of Vol. 4 | 294 |
| 7.5.4 Triaxial compression test | 197 | | |
| 7.5.5 Tensile strength of the soil | 198 | | |
| 7.6 Shear strength of cohesionless soils | 199 | | |
| 7.6.1 Factors affecting internal friction | 199 | | |
| 7.6.2 Volume change during shear | 202 | | |
| 7.6.3 Some other factors influencing the shear strength of granular soils | 208 | | |
| 7.7 Shearing strength of cohesive soils | 211 | | |
| 7.7.1 Drained and undrained shearing strength | 211 | | |
| 7.7.2 Factors affecting the shearing strength | 214 | | |
| 7.7.3 Deformations due to shear | 216 | | |
| 7.7.4 Cohesion of clays | 219 | | |
| 7.7.5 General relationship between effective normal stress, shearing strength and water content for saturated clays | 223 | | |
| Recommended reading | 225 | | |
