

Handbook of Soil Mechanics

Volume 4

**Application of Soil Mechanics in Practice:
Examples and Case Histories**

by

Árpád Kézdi

and

László Rétháti

Elsevier

Amsterdam · Oxford · New York · Tokyo 1990

Contents

Introduction	7	2.6	Investigation of a small-size dam	63
References	10	2.7	Stability of flood-protective dams	71
Chapter 1. Stability of earthworks (in general)	11	2.7.1	General remarks	71
1.1 Settlement of embankments	11	2.7.2	Some physical characteristics of earth material for construction	74
1.1.1 Theoretical and practical consideration	11	2.7.3	Infiltration of water into a dam	78
1.1.2 Example to show comparison between calculated and measured settlement	14	2.7.4	Leaching underneath the top layer below a dam	79
1.2 Stability of embankments	17	2.7.5	Failure types, stability analyses	80
1.2.1 Determination of shear resistance in the soil	17	2.8	Protective layer above a plastic foil employed for protection against seepage	84
1.2.2 Stress conditions inside an embankment	20	2.8.1	Friction coefficient between soil and plastic foil	84
1.2.3 Short-term analysis for a deep soft layer	21	2.8.2	Possible causes that impair the protective layer	86
1.2.4 Investigation of embankments laid on thin soft layers	22	2.8.3	Stability of the protective layer	86
1.2.5 Collapse of an embankment under the influence of pore-water pressure	22	References		90
1.2.6 Stability during construction in stages	23	Chapter 3. Large dams, dumping sites and cuts produced by mining and industrial operations		93
1.2.7 <i>In situ</i> observations during and after construction	24	3.1	Dumps made by using dry technologies	93
1.2.8 Base failure under a railway dam	25	3.2	Hydraulic fills	94
1.2.9 Construction in stages (example)	29	3.2.1	Technologies for building dumps	94
1.3 Compaction of earthworks	32	3.2.2	Physical properties of hydraulic fills	95
1.3.1 General remarks	32	3.2.3	Stability analysis of hydraulic fills	96
1.3.2 Compaction works at a cement factory	32	3.2.4	Damage on hydraulic fills due to seismic effects	97
1.4 Geotechnics of earthworks on railways	39	3.2.5	Posterior investigation of dams affected by seismic effects	98
1.4.1 Function of the earthwork	39	3.3	Geotechnical aspects of open-cast mines	99
1.4.2 Damage on the earthwork of a siding	42	3.3.1	Scope of soil mechanics	100
References	45	3.3.2	Soil-physical characteristics	101
Chapter 2. The stability of earthworks limited by water bodies	47	3.3.3	Stability of cut slopes	106
2.1 Seepage through a dam	47	3.3.4	Slope stability in dumping heaps	114
2.2 Examination of a sudden drawdown effect	50	References		120
2.3 Internal erosion and piping	52	Chapter 4. Landslides		121
2.4 Examination of old dams made of cohesive soils	56	4.1	Effects that initiate surface movement	121
2.5 Soil investigation of a water reservoir	57	4.2	Types of landslides	124
Appendix (by I. Lazányi)	62			

4.2.1	Basic types of movement	125	6.2.3	Decisions about the risk of swelling	247
4.2.2	Multiple and complex landslides	126	6.2.4	The process of volume change (examples)	248
4.3	Stratum (translation) slides	127	6.2.5	Prevention of damage caused by expansive soil	251
4.3.1	Geometry of the sliding mass	127	6.3	Foundations on loess	252
4.3.2	Geological age of the layers	128	6.3.1	Characteristics of subsidence and its determination	253
4.3.3	Physical properties of the layers	128	6.3.2	Decisions on, and reckoning with the risk of subsidence	254
4.3.4	Physical properties of the plastic zone at the interface of the two layers	129	6.3.3	Examples	256
4.3.5	Movement of the ground prior to a transitional slide	133	6.3.4	Prevention against the risk of subsidence	257
4.4	Prevention and rehabilitation	134	6.3.5	Case histories — foundation on collapsible soil	259
4.5	Examples and case studies	136	6.4	Damage to non-structural elements	265
4.5.1	Investigation and reconstruction of a landslide	136	6.4.1	Foundation of partition walls	265
4.5.2	The Pécskődomb slide at Salgótarján	144	6.4.2	Foundation of floors	266
4.5.3	Investigation of the clay pit of a brickyard in the Budapest area	151	6.4.3	Foundation of other non-structural elements	267
4.5.4	Stability of a railway line section along the shore of Lake Balaton	160	6.5	The effect of groundwater on deterioration of buildings	268
4.5.5	Landslide (fall) on the Danube shoreline	172	6.6	Case studies	271
4.5.6	Design of drainage systems	185	6.6.1	Study of foundation alternatives for a residential building	271
References		190	6.6.2	Foundation of a silo at a cement factory	276
Chapter 5. Retaining walls		193	6.6.3	Foundation of a silo	283
5.1	Types of retaining structures	193	6.6.4	Foundation of a processing tower	296
5.2	Design of retaining walls	196	6.6.5	Foundation of the piers of a Danube bridge	304
5.2.1	General remarks	196	6.6.6	Foundation of a television tower	309
5.2.2	Determination of the earth pressure	199	6.6.7	Settlement and tilt of a television tower	314
5.2.3	Dimensioning of a retaining wall	205	References		318
5.2.4	Earth pressure on specially arranged retaining walls	209	Appendix		321
5.2.5	Design against tilt and sliding	214	A.1	Examination of flocculant-treated soils	321
5.2.6	Design by probabilistic methods	215	A.1.1	The flocculant and its effect on the degree of dispersion	321
5.3	Damage to retaining walls	216	A.1.2	The effect of flocculant on the mechanical properties of a soil	324
5.4	Reconstruction and reinforcement of retaining walls	219	References		327
5.5	Case studies	221	A.2	Deterioration of a sewer under the load of the overburden	327
5.5.1	Failure of a retaining wall	221	A.2.1	The construction of the sewer	327
5.5.2	The case of a platform in clay	224	A.2.2	Soil-physical properties	328
5.5.3	Examination of a shelf-type retaining structure	230	A.2.3	Measurement of pressures	328
References		236	A.2.4	Evaluation of the results	331
Chapter 6. Foundations of buildings		237	Author index		333
6.1	Conclusions derived from failures	237	Subject index		335
6.1.1	Causes of damage	237			
6.1.2	Age of buildings	239			
6.1.3	Damage caused by static compression	240			
6.1.4	The role of cellars in harmful effects	241			
6.1.5	The role of rigidity of the building	243			
6.2	Foundations on swelling soils	244			
6.2.1	Examination of soils with volume change	244			
6.2.2	Relationships between different soil parameters	245
