CONTENTS

<i>Preface</i>	ix
<i>Preface to the English edition</i>	xi
<i>Units</i>	xii
1 Introduction to soil mechanics – soil for the engineer	1
1.1 Introduction	1
1.2 Investigation in soil mechanics	1
1.3 Identification of soils	2
1.4 From identification to classification	7
1.5 Permeability	8
1.6 Structural analysis of soils	10
2 Rheological behaviour of soils	11
2.1 Shearing resistance	11
2.2 Compressibility	14
2.3 Relation between shearing strength and compressibility	16
2.4 Sample taking for mechanical tests	16
3 Introduction to theoretical soil mechanics	19
3.1 Soil elasticity	19
3.2 Soil plasticity	21
3.3 Semi-infinite mass, Rankine equilibrium, conjugate elements	22
3.4 Upper and lower equilibrium	24
3.5 General case	25
3.6 Similarity in soil mechanics	27
4 Equilibrium of slopes and retaining walls	29
4.1 Calculating the stability of a structure	29
4.2 Calculating the stability of a slope	33
4.3 Retaining walls	34
4.4 Landslide stabilisation	36
5 Roads and bridges	39
5.1 Road alignment	39
5.2 Drainage	39
5.3 The embankment and its foundation	40
5.4 Bridges and other road constructions	40

5.5	The pavement	41
5.6	Design of a pavement	43
6	Compaction	47
6.1	Principle of compaction	47
6.2	Physical properties of compacted soils	49
6.3	Compacting equipment	50
6.4	Application to roads	50
6.5	Application to earth dams	51
7	Bearing capacity of shallow foundations	53
7.1	Purely cohesive soils	53
7.2	Purely cohesionless soils (sands and gravels)	57
7.3	Soils having cohesion and an angle of internal friction (natural soils)	58
7.4	Safety factor	64
7.5	Foundations in practice	65
8	Settlement of shallow foundations	67
8.1	Calculating the settlement of a clayey layer confined between two permeable layers	68
8.2	Secondary settlement	70
8.3	Distribution of stresses in the soil	71
8.4	Calculating the settlement beneath foundations	73
8.5	Allowable settlement of foundations	74
8.6	Elastic instability of foundations	75
9	Bearing capacity and settlement of deep foundations	78
9.1	Pile technology	78
9.2	Bearing capacity of deep foundations	83
9.3	Bearing capacity of piles from dynamic tests	86
9.4	Negative friction	88
9.5	Anchorage	88
9.6	Grouped piles – settlement of piles	90
9.7	Accidents with deep foundations	90
10	Earth dams	91
10.1	Further calculations of slope stability	91
10.2	Additional components: filters and waterproofing	97
10.3	Building earth dams	101
11	Rock mechanics	103
11.1	Rock fissuration	103
11.2	Fissuration of rock masses	106
11.3	Foundations on rock masses	115
11.4	Improvement of the mechanical qualities of rock masses	117

12	Equilibrium of underground structures	120
12.1	The mechanism of collapse of an underground structure	120
12.2	Elastic analysis of a circular gallery	121
12.3	Analysis of the plastic field	125
12.4	Underground structures subjected to infiltrations	131
	<i>References and further reading</i>	136
	<i>Index</i>	143
