# PRINCIPLES OF RIVER HYDRAULICS

## part one

AUGUSTO GHETTI

# I N D E X

<b>SECTION 1 - UNIFORM FLOW IN FIXED BOTTOM OPEN CHANNELS</b> .....	pag. 5
1. Introduction .....	pag. 7
2. Velocity and shear stress distribution in the cross-section of rigid boundary channels .....	pag. 8
3. Resistance to flow in fixed bottom channels .....	pag. 22
References .....	pag. 39
<b>SECTION 2 - PRINCIPLES OF RIVER HYDRAULICS</b> .....	pag. 41
1. Properties of bed materials .....	pag. 43
1.1. Mode of transportation .....	pag. 43
1.2. Sediment classification .....	pag. 45
1.3. Fall velocity .....	pag. 50
1.4. Pebble gradation along a water course .....	pag. 53
2. Bed-layer incipient motion .....	pag. 57
2.1. On a horizontal bed loose grains .....	pag. 57
2.2. On an inclined bed or a sloping wall, loose grains .....	pag. 61
2.3. Cohesive soils .....	pag. 63
3. Sediment load transportation at the bed (bed-load).....	pag. 67
3.1. Du Boys-type equations .....	pag. 67
3.2. Schoklitsch - type equations .....	pag. 71
3.3. Contributions by the E.T.H. ....	pag. 72
3.4. Theoretical evaluation by Einstein and others .....	pag. 75
3.5. Other contributions .....	pag. 80
4. Suspended load transportation .....	pag. 86
4.1. Distribution of the suspended load concentration .....	pag. 86
4.2. Evaluation of the load moving in suspension .....	pag. 92
5. The total sediment load .....	pag. 94
5.1. Theoretical approaches .....	pag. 94
5.2. Experimental results and comparisons .....	pag. 96
6. Movable bed configurations .....	pag. 99
6.1. Experimental evidence .....	pag. 99
6.2. The origin of bed ripples .....	pag. 105
6.3. Qualitative representing models .....	pag. 108
7. Flow resistance caused by bed forms .....	pag. 114
7.1. Experimental evidence .....	pag. 114
7.2. Theoretical support .....	pag. 117
References .....	pag. 123

<b>SECTION 3 - RIVER MORPHOLOGY</b> .....	pag. 129
<b>1. Generalities</b> .....	pag. 131
<b>2. Shooting streams and torrents</b> .....	pag. 133
<b>3. Planimetric features of rivers</b> .....	pag. 137
3.1. Braiding and meandering .....	pag. 137
3.2. Development and shaping of braided watercourses .....	pag. 142
<b>4. Transverse profile of straight river channels</b> .....	pag. 151
4.1. General remarks .....	pag. 151
4.2. Theoretical cross-section shapes for loose grains material .....	pag. 153
4.3. Cross-section of canals with bed of cohesive materials .....	pag. 156
4.4. Regime theory .....	pag. 158
<b>5. Meandering</b> .....	pag. 161
5.1. Motion in channels bends .....	pag. 161
5.2. Bed patterns in channels bends .....	pag. 166
5.3. Morphological aspects and interpretation of river meandering .....	pag. 174
5.4. A qualitative interpretation of meandering .....	pag. 182
5.5. Theoretical analysis of braids and meander formation .....	pag. 185
<b>References</b> .....	pag. 198
