COURSES AND LECTURES - No. 275

ROCK FRACTURE MECHANICS

EDITED BY

H.P. ROSSMANITH

TECHNICAL UNIVERSITY OF VIENNA

SPRINGER - VERLAG

WIEN - NEW YORK

CONTENTS

PREFACE

I. BASICS OF ROCK FRACTURE MECHANICS <i>(R.A.Schmidt - H.P.Rossmannith)</i>	1
1. Introduction	1
2. Linear Elastic Fracture Mechanics (LEFM)	3
2.1. The Stress Intensity Factor	5
2.2. Fracture Criteria	10
2.3. Fracture Toughness	11
2.4. Crack Tip Zone of Micro-Cracking in Rock	12
2.5. Subcritical Crack Growth	17
3. Development of Fracture Toughness Testing	19
3.1. CT-Specimen and 3PB-Specimen Testing	21
3.2. Anisotropy	25
3.3. Effects of Hydrostatic Compression	25
4. Closure	26
5. References	27
II. ANALYSIS OF CRACKS RELATED TO ROCK FRAGMENTATION <i>(F.Ouchterlony)</i>	31
1. Introduction to Blasting Configurations	31
2. Idealized Crack Systems	32
3. Complex Representation and Conformal Mapping	37
3.1. Method	37
3.2. Results	40
3.3. Formal Approach to Uniform Growth	52
4. Path-Independent Integrals	57
4.1. Method	57
4.2. Results and Applications	61
5. References	66

III. FRACTURE TOUGHNESS TESTING OF ROCK	69
<i>(F.Ouchterlony)</i>	
1. Review of Toughness Testing	69
1.1. On Specimen Geometries	70
1.2. Specific Work of Fracture	70
1.3. Griffith's Balance of Energy Rates	72
1.4. Fracture Toughness	74
1.4.1. Validity of Metals Testing Criteria	75
1.4.2. Other Aspects	79
1.5. J-Integral Resistance	82
1.5.1. Applicability of J_{Ic} Test Practice for Metals to Rock	83
1.5.2. J_{Ic} -Measurements on Rock	85
1.6. Anisotropy Effects	90
1.6.1. Material Description	91
1.6.2. Crack Growth Resistance Values	92
1.7. Conclusions	96
2. Development of Core Bend Specimens	98
2.1. Single-Edge-Crack-Round-Bar in Bending (SECRBB)	98
2.1.1. Experimental Procedure	101
2.1.2. Results	105
2.1.3. Further Fracture Mechanics Formulas	107
2.2. Chevron-Edge-Notch-Round-Bar in Bending (CENRBB)	110
3. Crack Resistance Measurements on Core Specimens	114
3.1. Simple R-Curve Approach to SECRBB Testing	115
3.1.1. Prediction Formulas	115
3.1.2. Energy Rate Crack Resistance Data	118
3.1.3. Conclusions	121
3.2. Direct R-Curve Measurements on SECRBB Specimens	121
3.2.1. R-Curves from Complete Failure Curves	122
3.2.2. R-Curves from Sub-Critical Failure Cycles	131
3.2.3. Conclusions	141
3.3. Conclusions from Core Toughness Data	141
4. References	145
IV. NUMERICAL MODELLING OF FRACTURE PROPAGATION	151
<i>(A.R.Ingraffea)</i>	
1. Introduction	151
2. The Nature of Fracture Propagation in Rock	155
3. Stress Intensity Factor Computation	159
3.1. A Historical Overview	160
3.2. Computation by Finite Element Method	165
3.3. Computation by Boundary Element Method	170

4.	Theories of Mixed-Mode Fracture	174
4.1.	The $\sigma_{\theta,\max}$ -Theory	176
4.2.	The $S(\theta)_{\min}$ -Theory	179
4.3.	Comparison of Mixed-Mode Fracture Theories	181
4.4.	Predicting Crack Increment Length	183
5.	Fracture Propagation Programs	189
5.1.	Numerical Methods	189
5.2.	User-Computer Interface	190
5.3.	Automatic Remeshing	191
5.4.	Example Solutions	192
6.	Fracture Propagation Modelling - The Future	199
7.	References	204
V.	DYNAMIC PHOTOELASTICITY AND HOLOGRAPHY APPLIED TO CRACK AND WAVE PROPAGATION <i>(H.P.Rossmannith - W.L.Fourney)</i>	209
1.	Photoelasticity	210
2.	High-Speed Photography and Requirements of an Optimum Photographic System in Dynamic Photoelasticity	213
2.1.	Cranz-Schardin Camera	215
3.	Dynamic Holography	217
4.	Applications	220
4.1.	Wave Propagation	220
4.2.	Fracture Mechanics	222
4.3.	Crack-Wave Interaction	222
5.	References	227
VI.	ELASTIC WAVE PROPAGATION <i>(H.P.Rossmannith)</i>	229
1.	Waves in Unbounded Media	229
1.1.	Plane Waves	229
1.2.	Spherical and Cylindrical Waves	232
1.2.1.	Spherical Waves	233
1.2.2.	Cylindrical Waves	233
1.3.	Superposition of Elastic Waves	233
2.	Boundary Effects	234
2.1.	Cohesive Joints	234
2.2.	Loose Joints	238
2.3.	Plate Waves	240

2.4. Surface Waves	241
2.4.1. Glancing Angle Diffraction	241
2.4.2. Rayleigh-Waves	241
2.4.3. P-Wave Propagation in Layers	241
2.5. Nonplanar Wave Fronts at Boundaries and Interfaces	243
3. Dynamic Layer Detachment and Spallation	249
References	251
 VII. ANALYSIS OF DYNAMIC PHOTOELASTIC FRINGE PATTERNS <i>(H.P. Rossmannith)</i>	253
1. Identification of Isochromatic Fringes	254
2. Data Analysis	256
2.1. Boundary Conditions	256
2.2. Wave Form Conditions	257
3. Fracture Analysis Using Photoelastic Data	358
3.1. Mixed-Mode Fracture Problem	259
3.2. A Multiparameter Approach	262
4. Crack Speed versus Stress Intensity Factor Characterization of Dynamic Fracture	268
5. References	269
 VIII. DYNAMIC CRACK ANALYSIS AND THE INTERACTION BETWEEN CRACKS AND WAVES <i>(H.P. Rossmannith)</i>	271
1. The Moving Crack	271
1.1. Discontinuous Change of Crack Speed	279
2. Crack-Wave Interaction	282
2.1. Cracks Subjected to Stress Wave Loading	282
2.1.1. Diffraction by a Stationary Crack	284
2.1.2. Crack Extension Following Wave Diffraction	286
2.2. Photoelastic Investigation of Crack-Wave Interaction	290
3. Interface Cracks and Joints	295
4. References	299

IX. FRACTURE CONTROL BLASTING <i>(W.L.Fourney)</i>	301
1. Introduction	301
1.1. Effect of Notches in a Borehole	302
1.2. Control of Crack Initiation	303
2. Photoelastic Studies of Fracture Control	310
3. References	318
X. FRAGMENTATION STUDIES WITH SMALL FLAWS <i>(W.L.Fourney)</i>	321
1. Introduction	321
2. Fragmentation of a Homogeneous Model	323
3. Effects of Small Flaws	332
4. Summary	338
5. References	340
XI. FRAGMENTATION STUDIES WITH LARGE FLAWS <i>(W.L.Fourney)</i>	341
1. Introduction	341
2. Joint Initiated Fracture	344
3. Time Delays Between Boreholes	349
4. References	352
XII. GAS WELL STIMULATION STUDIES <i>(W.L.Fourney)</i>	353
1. Introduction	353
2. Growth of Fractures from a Wellbore and Gas Flow into them	354
2.1. Effect of Loading Rate	361
2.2. Stem Induced Fracture	361
3. References	369

XIII. GROUND VIBRATION STUDIES <i>(W.L. Fourney)</i>	371
1. Introduction	371
2. Theory	373
3. Results	375
4. Conclusion	380
5. References	381
 XIV. MODELLING AND DEVELOPMENT OF HYDRAULIC FRACTURING TECHNOLOGY <i>(M.P. Cleary)</i>	383
Summary	383
Introduction	384
1. Potential and Status of Fracturing Technology	391
1.1. Mechanisms of Fracture Creation in Rock	391
1.2. General Equations Governing Hydraulic Fracturing	394
1.3. Models of Fracture Processes, Existing Potential Technology	400
1.3.1. Modelling	400
1.3.2. Field Technology	401
2. First-Order Models and Design of Hydraulic Fractures	405
2.1. Mathematical Models	405
2.1.1. Equations Governing Lumped P3DH-Type Models	405
2.1.2. Algebraic Solutions of Lumped Model Equations	411
2.1.3. Numerical Solutions of Lumped Model Equations	416
2.2. Summary of P3DH-Model Equations and Results	416
2.2.1. Reduction of P3DH-Model to Ordinary Differential Equations	422
2.2.2. Self-Similar Approximations for Storage in Lateral Flow	425
2.2.3. Hybridisation of Self-Similar and O.D.E. Models	428
2.3. Hydrafrac Designs Based on Lumped Model Solutions	430
3. Detailed Theoretical Modelling Hydrafrac	439
3.1. Complete Simulation for a Representative Cross Section	440
3.2. Development of a Reference Circular Hydrafrac Model	440
3.3. Modelling of Multiple Fractures, Interaction with Reservoir Conditions of Stress, Pore Pressure and Material Variations	443

3.3. Modelling of Multiple Fractures, Interaction with Reservoir Conditions of Stress, Pore Pressure and Material Variations	443
3.4. Fracture Impedance Mechanisms, Branching and Slipping	445
3.5. Fully Three-Dimensional Simulation of Fracturing	445
4. Laboratory Simulation of Fracturing	448
4.1. Interface Separation Apparatus, DISLASH	449
4.2. Apparatus for Full 3-D-Fracture Growth and Interaction	454
4.3. Development of Data Acquisition and Control Systems	459
4.4. Monitoring of Fracture Growth in the Laboratory	460
4.5. Some Studies on Fluid Rheology	462
5. Laboratory Testing of Material Response	463
5.1. High Temperature Triaxial Test System	464
5.2. Permeability, PPIC, and High Pressure Triaxial Test Systems	466
List of References	467
