

Trench excavation and support

J. K. Budleigh

Thomas Telford, London

Contents

1. Introduction	1
2. Route selection and early planning <i>Longitudinal profile; land interests and compensation; physical destructions; areas of bad ground; future access needs; existing public utilities and structures; social costs</i>	5
3. Site investigation	10
4. Choice of excavation plant <i>Continuous trenching machines; jib operated excavators; applications</i>	13
5. The causes of trench failure	19
6. Traditional methods of trench support <i>Support by poling boards, waling and struts; design of traditional trench supports; support by interlocking sheet piles; soldier piles; staged trench excavation</i>	26
7. Proprietary support systems <i>Hydraulically strutted shores and walings; shields and boxes; plate lining systems</i>	38
8. Dealing with groundwater <i>Sump pumping; well pointing</i>	43
9. Bottoming-up and backfilling	48
10. Reinstatement <i>Highway reinstatement; reinstatement of unpaved land; reinstatement of land drainage; reinstatement of individual drain pipes; construction of an interceptor drain</i>	53

Contents

11. Contractual aspects and safety	61
<i>The contractual relationship; safety hazards in trench, excavation; the human element; compliance with construction regulations</i>
