

preface

# GEODYNAMICS

## Applications of Continuum Physics to Geological Problems

**Donald L. Turcotte**

*Professor of Geological Sciences  
Cornell University*

**Gerald Schubert**

*Professor of Geophysics and Planetary Physics  
University of California, Los Angeles*

**John Wiley & Sons**

*New York Chichester Brisbane Toronto Singapore*

# table of contents

<b>1. Plate Tectonics</b>	1	2-6	Stress Measurement	86
1-1 Introduction	1	2-7	Basic Ideas about Strain	88
1-2 The Lithosphere	6	2-8	Strain Measurements	95
1-3 Accreting Plate Margins	7			
1-4 Subduction	11			
1-5 Transform Faults	15			
1-6 Continents	16			
1-7 Paleomagnetism and the Motion of the Plates	21	<b>3. Elasticity and Flexure</b>		104
1-8 Triple Junctions	34	3-1 Introduction		104
1-9 The Wilson Cycle	37	3-2 Linear Elasticity		105
1-10 Continental Collisions	41	3-3 Uniaxial Stress		106
1-11 Volcanism and Heat Flow	43	3-4 Uniaxial Strain		108
1-12 Seismicity and the State of Stress in the Lithosphere	54	3-5 Plane Stress		109
1-13 The Driving Mechanism	58	3-6 Plane Strain		110
1-14 Comparative Planetology	59	3-7 Pure Shear and Simple Shear		111
1-15 The Moon	59	3-8 Isotropic Stress		112
1-16 Mercury	62	3-9 Two-Dimensional Bending or Flexure of Plates		112
1-17 Mars	63	3-10 Bending of Plates under Applied Moments and Vertical Loads		115
1-18 Phobos and Deimos	66	3-11 Buckling of a Plate under a Horizontal Load		118
1-19 Venus	66	3-12 Deformation of Strata Overlying an Igneous Intrusion		119
1-20 The Galilean Satellites	68	3-13 Application to the Earth's Lithosphere		121
		3-14 Periodic Loading		122
		3-15 Stability of the Earth's Lithosphere under an End Load		124
<b>2. Stress and Strain in Solids</b>	74	3-16 Bending of the Elastic Lithosphere under the Loads of Island Chains		125
2-1 Introduction	74	3-17 Bending of the Elastic Lithosphere at an Ocean Trench		128
2-2 Body Forces and Surface Forces	74	3-18 Flexure and the Structure of Sedimentary Basins		131
2-3 Stress in Two Dimensions	80			
2-4 Stress in Three Dimensions	84			
2-5 Pressures in the Deep Interiors of Planets	85			

<b>4. Heat Transfer</b>	134	4-26 Frictional Heating on Faults: Island Arc Volcanism and Melting on the Surface of the Descending Slab	189
4-1 Introduction	134	4-27 Mantle Geotherms and Adiabats	190
4-2 Fourier's Law of Heat Conduction	135	4-28 Thermal Structure of the Subducted Lithosphere	195
4-3 Measuring the Earth's Surface Heat Flux	135		
4-4 The Earth's Surface Heat Flow	137		
4-5 Heat Generation by the Decay of Radioactive Elements	139	<b>5. Gravity</b>	198
4-6 One-Dimensional Steady Heat Conduction with Volumetric Heat Production	142	5-1 Introduction	198
4-7 A Conduction Temperature Profile for the Mantle	144	5-2 Gravitational Acceleration External to the Rotationally Distorted Earth	199
4-8 Continental Geotherms	145	5-3 Centrifugal Acceleration and the Acceleration of Gravity	204
4-9 Radial Heat Conduction in a Sphere or Spherical Shell	148	5-4 The Gravitational Potential and the Geoid	204
4-10 Temperatures in the Moon	150	5-5 Moments of Inertia	210
4-11 Steady Two- and Three-Dimensional Heat Conduction	151	5-6 Surface Gravity Anomalies	212
4-12 Subsurface Temperature Due to Periodic Surface Temperature and Topography	152	5-7 Bouguer Gravity Formula	216
4-13 One-Dimensional, Time-Dependent Heat Conduction	154	5-8 Reductions of Gravity Data	218
4-14 Periodic Heating of a Semi-Infinite Half-Space: Diurnal and Seasonal Changes in Subsurface Temperature	155	5-9 Compensation	218
4-15 Instantaneous Heating or Cooling of a Semi-Infinite Half-Space	158	5-10 The Gravity Field of a Periodic Mass Distribution on a Surface	219
4-16 Cooling of the Oceanic Lithosphere	163	5-11 Compensation Due to Lithospheric Flexure	221
4-17 The Stefan Problem	168	5-12 Isostatic Geoid Anomalies	222
4-18 Solidification of a Dike or Sill	172	5-13 Compensation Models and Observed Geoid Anomalies	225
4-19 The Heat Conduction Equation in a Moving Medium: Thermal Effects of Erosion and Sedimentation	174		
4-20 One-Dimensional, Unsteady Heat Conduction in an Infinite Region	176	<b>6. Fluid Mechanics</b>	231
4-21 Thermal Stresses	178	6-1 Introduction	231
4-22 Ocean Floor Topography	181	6-2 One-Dimensional Channel Flows	232
4-23 Changes in Sea Level	183	6-3 Asthenospheric Counterflow	235
4-24 Thermal and Subsidence History of Sedimentary Basins	185	6-4 Pipe Flow	237
4-25 Heating or Cooling a Semi-Infinite Half-Space by a Constant Surface Heat Flux	188	6-5 Artesian Aquifer Flows	239
		6-6 Flow through Volcanic Pipes	240
		6-7 Conservation of Fluid in Two Dimensions	240
		6-8 Elemental Force Balance in Two Dimensions	241
		6-9 The Stream Function	243
		6-10 Postglacial Rebound	244
		6-11 Angle of Subduction	249
		6-12 Diapirism	251

6-13 Folding	257	8-5 Thrust Sheets and Gravity Sliding	357
6-14 Stokes Flow	263	8-6 Stick-Slip and Elastic Rebound	359
6-15 Pipe Flow with Heat Addition	268	8-7 San Andreas Fault	362
6-16 Aquifer Model for Hot Springs	270	8-8 North Anatolian Fault	365
6-17 Thermal Convection	272	8-9 Some Elastic Solutions for Strike-Slip Faulting	367
6-18 Linear Stability Analysis for the Onset of Thermal Convection in a Layer of Fluid Heated from Below	274	8-10 Stress Diffusion	373
6-19 Boundary Layer Theory for Finite-Amplitude Thermal Convection	279	8-11 Thermally Activated Creep on Faults	375
6-20 The Forces That Drive Plate Tectonics	286		
6-21 Heating by Viscous Dissipation	289	<b>9. Flow in Porous Media</b>	381
		9-1 Introduction	381
<b>7. Rock Rheology</b>	294	9-2 Darcy's Law	381
7-1 Introduction	294	9-3 Permeability Models	383
7-2 Elasticity	296	9-4 Flow in Confined Aquifers	384
7-3 Diffusion Creep	303	9-5 Flow in Unconfined Aquifers	386
7-4 Dislocation Creep	311	9-6 Geometrical Form of Volcanoes	396
7-5 Shear Flows of Fluids with Temperature- and Stress-Dependent Rheologies	315	9-7 Equations of Conservation of Mass, Momentum, and Energy for Flow in a Porous Media	399
7-6 Mantle Rheology	325	9-8 One-Dimensional Advection of Heat in a Porous Medium	400
7-7 Rheological Effects on Mantle Convection	330	9-9 Thermal Convection in a Porous Layer	402
7-8 Mantle Convection and the Cooling of the Earth	332	9-10 Thermal Plumes in Fluid Saturated Porous Media	406
7-9 Crustal Rheology	335	9-11 Porous Flow Model for Magma Migration	413
7-10 Viscoelasticity	337	9-12 Two-Phase Convection	417
7-11 Elastic-Perfectly Plastic Behavior	341		
		<b>Appendix 1</b> Symbols and Units	423
<b>8. Faulting</b>	348	<b>Appendix 2</b> Physical Constants and Properties	429
8-1 Introduction	348		
8-2 Classification of Faults	348	<b>Answers to Selected Problems</b>	433
8-3 Friction on Faults	351	<b>Index</b>	437
8-4 Anderson Theory of Faulting	354
