# Contents

LIST OF SYMBOLS	vii
1. INTRODUCTION	1
1.1 Strain analysis	1
1.2 Uses of strain analysis	1
1.3 Elliptical objects as strain markers	2
2. THEORETICAL BASIS OF THE $R_f/\phi$ METHOD	3
2.1 Deformation of a passive elliptical marker	3
2.2 Suites of markers with identical initial eccentricity	4
2.3 Suites of markers with identical initial orientation	6
3. DATA COLLECTION	8
3.1 Suitable material for $R_f/\phi$ analysis	8
3.2 Making the $R_f/\phi$ measurements	8
3.3 Amount of data required	10
3.4 Plotting the $R_f/\phi$ data	11
3.5 Three-dimensional strain	11
4. APPLICATION OF THE STANDARD CURVES TO DETERMINE THE STRAIN RATIO	12
4.1 Introduction	12
4.2 The Symmetry Test	12
4.3 The $\theta$ -Distribution Test	15
4.4 The $\theta$ -Distribution Test for low $R_i$ particles	17
4.5 Destraining procedure assuming a symmetrical theta distribution	20
4.6 Initial fabrics symmetrical about bedding	20
5. EXTENSIONS OF THE $R_f/\phi$ METHOD	23
5.1 Introduction	23
5.2 Viscosity contrast between the inclusions and matrix	23
5.3 Deformation by pressure solution	25
5.4 Deformation of anisotropic markers	25
5.5 The $R_f/\phi$ method applied to heterogeneously strained rocks	25
6. THE MARKER DEFORMATION GRIDS	26
7. PURE SHEAR DEFORMATION PATHS FOR VARIOUS VISCOSITY CONTRASTS	78
APPENDIXES	
1. Basic equations	39
2. Production of symmetrical $R_f/\phi$ patterns from asymmetrical initial fabrics
