Contents

Contributors	v
General Preface	vii
Preface to Volume 1	xi
1 Historical Introduction to Geomagnetism	1
S. MALIN	
1 Introduction	1
2 Beginnings	2
3 De Magnete	7
4 Observing the magnetic field	9
4.1 Measurement of declination	9
4.2 Measurement of inclination	12
4.3 Measurement of intensity	13
4.4 Variation of the magnetic field with time	19
4.5 Variation of the magnetic field with position	24
5 Observatories	35
5.1 Observatory measurements	36
5.2 Reduction and dissemination of observatory data	43
6 Theory	44
7 Conclusion	48
References	48
2 General Instrumentation	51
A. J. FORBES	
1 Fundamental concepts and units	51
2 The Earth's magnetic field	52

3	Classes of instruments for measuring the magnetic field	65
3.1	Torsion magnetometers	68
3.2	Resonance magnetometers	86
3.3	Fluxgate magnetometer	108
3.4	Induction magnetometers	114
3.5	Cryogenic magnetometer	116
4	Telluric measurements	121
5	Observatories and surveys	122
5.1	Permanent observatories	122
5.2	Temporary observatories	124
5.3	Local surveys	124
5.4	Regional surveys	125
5.5	Conductivity arrays	126
5.6	Magnetotelluric sounding	128
5.7	Aeromagnetic surveys	131
5.8	Satellite measurements of the surface field	132
5.9	Classes of data	136
	References	136
3	Instrumentation and Experimental Methods for Oceanic Studies	143
	J. H. FILLOUX	
1	Introduction	143
1.1	Environmental constraints	143
1.2	Interpretation constraints	161
1.3	Special research	162
2	Examples of electric and magnetic observations in the ocean	163
2.1	Magnetotelluric and mixed motional signals	163
3	Observation techniques for magnetic fields	176
3.1	Earth's main-field parameters over the oceans	176
3.2	Mapping of sea-floor magnetic anomalies	178
3.3	Observation of temporal magnetic variations over the oceans	178
4	Observation techniques for electric fields	193
4.1	Electrode principles and behaviour	193
4.2	Electrode fabrication	196
4.3	Electrode switching	199
4.4	Various types of salt-bridge switch	205

4.5	Alternate electric field observations	219
4.6	Oceanic motion studies	228
5	Data processing and logging, power supplies	239
6	Experimental and field procedures	241
7	Conclusion	243
	References	245
4	The Main Field	249
	R. A. LANGEL	
1	Introduction	249
2	Representing the field	250
2.1	Laplace's equation	250
2.2	Spherical harmonics	251
2.3	Characteristics of spherical harmonics	253
2.4	Magnetic-field energy outside the core	259
2.5	Units	262
2.6	Separation of internal and external fields	262
2.7	Representation of temporal change	263
2.8	Coordinates	264
2.9	The spheroidal Earth	265
2.10	Magnetic moment	267
3	Measurements	268
4	A parade of models	285
4.1	Main field	285
4.2	Temporal change of the field	300
5	Effects of fields from the Earth's crust	314
6	Fields of external origin	325
6.1	The magnetic environment of the Earth	325
6.2	External fields in spherical harmonic models	335
6.3	Variations of harmonic coefficients with the solar cycle	337
6.4	The effect of neglecting external fields	338
7	The international geomagnetic reference field	341
8	Uniqueness and accuracy	346
8.1	Uniqueness theorems	347
8.2	Error analysis for vector least squares	352

8.3	Combined solution for main-field and secular variation	368
8.4	Error estimates in non-linear analysis	370
8.5	Distribution of error	371
8.6	Global average error, the Backus or perpendicular error effect	373
9	The potential in terms of field sources	378
10	Geomagnetic coordinates and time	380
10.1	The tilted dipole, dipole coordinates and magnetic local time	380
10.2	The eccentric dipole	382
10.3	Magnetic poles	387
11	The field at 1980	391
12	Temporal change of the geomagnetic field	397
12.1	Secular variation, 1900–1980	397
12.2	Secular variation, 1550–1970	437
12.3	Westward drift	438
12.4	Drift of the eccentric dipole	458
12.5	Periodicities and correlations with length-of-day	460
13	Alternative modelling methods	464
13.1	Harmonic spline modelling	464
13.2	Natural orthogonal components	475
13.3	Dipoles and current loops	482
13.4	Current functions	489
	References	492
5	The Crustal Field	513
	C. G. A. HARRISON	
1	Introduction	513
2	Instruments	515
3	Separation of the crustal field from the core field	518
4	Lineated magnetic anomalies over ocean basins	532
4.1	Inversions	535
5	Deep-towed observations of the crustal field made in ocean basins	550
5.1	Results	552

6	Studies of unlineated magnetic anomalies in ocean basins. The seamount problem	559
6.1	Results	565
7	Continental magnetic anomalies	572
8	Satellite observations and the long-wavelength component	580
9	Magnetic properties in relation to the source of the crustal field	593
	References	599
	Author Index	611
	Subject Index	623
