Contributors	v
General Preface	vii
Preface to Volume 2	xi
Contents of Volume 1	xix
1 Magnetohydrodynamics of the Earth's Core	1
D. GUBBINS and P. H. ROBERTS	
1 The reference state for the Earth's core	1
1.1 Hydrostatic equilibrium	1
1.2 The equations of fluid flow	5
1.3 Thermodynamic equations	9
1.4 The anelastic and Oberbeck–Boussinesq approximations	12
1.5 The equations of magnetohydrodynamics	16
1.6 Summary	23
2 Density stratification	27
2.1 Variations in composition	27
2.2 Schwarzschild's criterion	30
2.3 The Brunt–Väisälä frequency in the core	33
2.4 Speculations on the regime of fluid motion in the core	36
3 Conduction in solids	38
3.1 Skin effect. Flux ropes produced by rotors. The ω -effect	38
3.2 Toroidal and poloidal vectors. The decay modes for a sphere	44
3.3 Electromagnetic screening of the core by the mantle	51
3.4 Electromagnetic coupling of core and mantle	61
4 Fluids in rotation	72
4.1 Ekman, Rossby and Elsasser numbers	72
4.2 The Proudman–Taylor theorem	76
4.3 Inertial waves: Rossby waves	80

4.4	Ekman layers: spin-up	91
4.5	Magnetohydrodynamics of rotating fluids: the Taylor condition	98
5	Perfect fluids and their application to the theory of the secular variation	102
5.1	Alfvén's theorem	102
5.2	The frozen-flux approximation for secular variation	104
5.3	Determination of the core flow	107
5.4	Information from the horizontal components of the field	108
5.5	Application to the Earth's core	112
6	Diffusionless waves	114
6.1	Alfvén waves	114
6.2	Torsional oscillations	116
6.3	'Slow' (MC) waves	120
6.4	Dynamical instabilities: local analysis	122
7	Diffusion	134
7.1	Attenuation of magnetohydrodynamic waves	134
7.2	Resistive instabilities	136
7.3	Boundary layers	140
7.4	Diffusive effects and the secular variation	144
8	Magnetoconvection in rotating systems	146
8.1	Rayleigh-Bénard convection	146
8.2	Linear stability without and with rotation	153
8.3	Convection in rotating spheres and spherical shells	159
8.4	Linear magnetoconvection without and with rotation	168
	References	177
2	Origin of the Main Field: Kinematics	185
	P. H. ROBERTS and D. GUBBINS	
	Introduction	185
1	Driving mechanisms for convection and the dynamo	187
1.1	Energy sources	187
1.2	Thermal dynamo	188
1.3	The gravitationally powered dynamo	191
1.4	The rotationally powered dynamo	193
2	Kinematic dynamo theory	195
2.1	The kinematic dynamo problem	195
2.2	A necessary condition of the magnitude of the magnetic Reynolds number	196

2.3	A bound on the required radial motion	200
2.4	Cowling's theorem	202
2.5	A summary of anti-dynamo theorems	206
2.6	Examples of working fluid dynamos in a sphere	207
2.7	A comparison of critical magnetic Reynolds numbers for various dynamos	213
3	The α -effect	214
3.1	Large-scale waves on the average axisymmetric state	214
3.2	The inductive action of waves	216
3.3	Qualitative description of the α -effect	218
3.4	The α -effect of large-scale motions: nearly symmetric dynamos	222
3.5	The α -effect of small-scale motions: turbulence in the core	227
4	α^2 -Dynamos	233
4.1	Introduction	233
4.2	Constant α in a conducting sphere	234
4.3	Other choices for α	236
5	$\alpha\omega$ -Dynamos	237
5.1	Definition of the $\alpha\omega$ -dynamo	237
5.2	The $\alpha\omega$ -models: dynamo waves	239
5.3	The effect of meridional circulation	242
5.4	Another anti-dynamo theorem	244
	References	246
3	Origin of the Main Field: Dynamics	251
	P. H. ROBERTS	
1	Background	251
1.1	Preliminary questions	251
1.2	Theoretical modelling	255
2	Electrodynamic background	257
2.1	Induction equation and boundary conditions	257
2.2	Constant-velocity eigenvalue problem	259
3	Strong-field models	260
3.1	The magnetogeostrophic equations	260
3.2	Taylor's condition and its consequences	263
3.3	Alternative to Taylor's approach	268
4	Weak-field models	272
4.1	Helicity and the α -effect	272
4.2	Busse's first model	275

4.3	The Childress-Soward model	277
4.4	Busse's second model	282
5	Two-dimensional models	284
5.1	Nearly symmetric electrodynamic	284
5.2	The dynamics of the nearly symmetric dynamo	288
5.3	Numerical integrations	292
5.4	Equilibrium of α^2 -models	297
6	Conclusion	303
	References	303
4	Lunar Paleomagnetism	307
	M. FULLER and S. M. CISOWSKI	
1	Introduction	307
2	The Apollo-returned lunar samples	309
3	Lunar-rock magnetism	315
3.1	Identification of magnetic phases	315
3.2	Characterization of magnetic phases in lunar samples	327
3.3	Discussion	355
4	Paleomagnetic record of Apollo samples	355
4.1	Demagnetization characteristics of lunar samples	356
4.2	Paleointensity of lunar fields	410
5	Present lunar magnetic fields	427
5.1	Remanent magnetic fields measured with the surface magnetometers	428
5.2	Observations of lunar magnetic fields with Apollo 15 and 16 subsatellites	433
5.3	Lunar surface fields from the back-scattered-electron experiment	437
6	The origin of lunar magnetism	438
6.1	Reassessment of lunar paleomagnetism	439
6.2	Models of the origin of lunar magnetism	441
7	Conclusions and directions for future research	445
	Acknowledgements	448
	References	448

5	Planetary Magnetism	457
	C. T. RUSSELL	
1	Introduction	457
2	Mercury	460
2.1	Observations	461
2.2	Deriving the planetary moment	463
2.3	The source of the intrinsic field	468
3	Venus	469
3.1	Observations	470
3.2	Discussion	478
4	Mars	479
4.1	Observations	480
4.2	Discussion	489
5	Jupiter	491
5.1	Observations	493
5.2	Models	495
5.3	Galilean satellites	500
6	Saturn	502
6.1	Observations	502
6.2	Discussion	505
6.3	Titan	508
7	Uranus	508
7.1	Observations	508
7.2	Discussion	509
8	Neptune and Pluto	510
9	Concluding remarks	511
	Acknowledgements	514
	References	514
6	Magnetism of Meteorites	525
	STANLEY M. CISOWSKI	
1	Introduction	525
2	Magnetic classification of meteorites	526

3	Magnetic properties of meteorites	530
4	Paleointensity studies on meteorites	533
4.1	Carbonaceous chondrites	533
4.2	Ordinary and enstatite chondrites	541
4.3	Achondrites	549
4.4	Irons	555
4.5	Tektites	555
5	Summary	555
	References	556
	Additional references	559
	Author Index	561
	Subject Index	571
