Contents

Contributors	v
General Preface	vii
Preface to Volume 3	ix
Contents of Volumes 1 and 2	xi
1 Physics of Rock Magnetism	1
SUBIR K. BANERJEE	
1 Introduction	1
2 Grain-size dependence of magnetic properties	2
2.1 Domain theory	2
2.2 Experimental observations	6
3 Natural remanent magnetization (NRM)	10
3.1 Primary or 'characteristic' remanence	10
3.2 Secondary remanences	21
Acknowledgements	25
References	25
2 Paleomagnetism	31
D. A. PIPER	
1 Introduction	31
2 Principles of rock and mineral magnetism	33
2.1 Diamagnetism, paramagnetism and ferromagnetism	33
2.2 Domain structure	35

2.3	Classification of the magnetizations in rocks	37
2.4	Theory of magnetic remanence	39
2.5	Anisotropy	46
3	The magnetic minerals	48
3.1	The magnetite-ulvöspinel series ($x\text{Fe}_2\text{TiO}_4(1-x)\text{Fe}_3\text{O}_4$)	49
3.2	The ilmenite-hematite series ($\alpha\text{Fe}_2\text{O}_3\text{-FeO}\cdot\text{TiO}_2$)	51
3.3	Maghemite ($\gamma\text{Fe}_2\text{O}_3$)	53
3.4	Goethite ($\alpha\text{-FeO}\cdot\text{OH}$)	53
3.5	Pyrrhotite (Fe_{1-x}S)	54
3.6	Other magnetic minerals	55
4	The magnetizations in rocks	55
4.1	The igneous environment	55
4.2	The sedimentary environment	58
4.3	The metamorphic environments	61
5	Field and laboratory measurements	62
5.1	Objectives and field sampling	62
5.2	Magnetometers	63
5.3	Demagnetization techniques	67
5.4	Tests for magnetic mineral and domain structure	70
6	Magnetic components and their analysis	75
6.1	Fisher statistics	75
6.2	Identification and separation of magnetic components	77
6.3	Dating components of magnetization	80
7	Palaeomagnetic poles	83
8	Apparent polar wander	85
8.1	Tectonic interpretation of APW	87
8.2	The palaeomagnetic data base	89
9	The palaeomagnetic record: the Precambrian	91
9.1	The 2800–2200 Ma APWP	94
9.2	The 2200–2000 Ma APWP	98
9.3	The 2000–1600 Ma APWP	100
9.4	The 1600–1300 Ma APWP	102
9.5	The 1300–1150 Ma APWP	104
9.6	The 1150–800 Ma APWP	105
9.7	The late Proterozoic APWP	109
10	The palaeomagnetic record: the Palaeozoic	116
10.1	Gondwanaland	117
10.2	The British microplate	119
10.3	Palaeozoic palaeomagnetism and the remagnetization hypothesis	124
10.4	Palaeomagnetism and the supercontinent Pangaea	127

11	The palaeomagnetism of Mesozoic and Cenozoic times	130
11.1	Laurentia	131
11.2	Eurasia	131
11.3	Gondwanaland	134
11.4	Eastern Asia	137
11.5	Suspect terranes	138
12	Palaeomagnetism and the axial-geocentric-dipole assumption	140
12.1	The palaeoclimatic evidence	141
12.2	The temporal significance of the palaeomagnetic record for the dipole assumption	144
	Acknowledgements	146
	References	148
13	A Description of the Behaviour of the Earth's Magnetic Field	163
	N. ROBERTS and J. D. A. PIPER	
1	Introduction	163
2	The behaviour of the geomagnetic field over historical time as deduced from direct measurement	164
3	Archaeomagnetic and palaeomagnetic data	169
3.1	Natural remanent magnetization	169
3.2	Archaeomagnetic data	170
3.3	Palaeomagnetic data	170
3.4	Disruptions of the natural remanence	173
4	Recognition of the palaeofield direction	174
5	Determination of the palaeofield intensity	178
6	Results from archaeo- and palaeomagnetic studies	181
6.1	The behaviour of the geomagnetic field from densely sampled time segments of archaeological and the most recent geological time (<50 000 years BP)	181
6.2	Excursions of the geomagnetic field	191
6.3	Reversals of the geomagnetic field	200
6.4	The long-term behaviour of the geomagnetic field—time-averaged description over periods of 5–100 million years	219
6.5	The earliest history of the Earth's magnetic field	236
	Acknowledgements	248
	References	248
	Notes added in Proof	259

4 The Electrical Conductivity of the Earth	261
W. D. PARKINSON and V. R. S. HUTTON	
1 History	261
2 Theory of electromagnetic induction	262
2.1 Introduction	262
2.2 The diffusion equation	263
2.3 The uniform sphere	265
2.4 The non-uniform sphere	268
2.5 The uniform half-space	268
2.6 The non-uniform half-space	270
2.7 Equivalent conductors	271
2.8 Separation of internal and external fields	274
2.9 Integral-equation methods	276
2.10 Inversion	278
2.11 Coprod	281
3 Magnetotelluric and gradient techniques	281
3.1 Magnetotellurics on land	282
3.2 Ocean-floor magnetotellurics	282
3.3 Impedance and apparent resistivity	284
3.4 Gradient method	287
4 The global conductivity distribution	287
4.1 Diurnal-variation analysis	290
4.2 Magnetic-storm analysis	293
4.3 Secular variation	295
4.4 Influence of shallow conductors	296
4.5 Results of global analyses	297
5 Temperature and tectonics	302
5.1 Conductivity mechanisms	302
5.2 Conductivity of mixtures	304
5.3 Geological control of conductivity	306
5.4 Temperature and conductivity	309
5.5 Tectonic relationships	312
5.6 Time variations of conductivity	313
6 Conductivity of the Moon	313
References	316
5 Indices of Geomagnetic Activity	323
G. K. RANGARAJAN	
1 Introduction	323
2 Common indices of geomagnetic activity: derivation and significance	326

2.1 <i>C</i> , <i>C_i</i> and <i>C₉</i> indices	326
2.2 The <i>K</i> index	326
2.3 Computer-generated alternatives to <i>K</i> indices	329
2.4 The <i>K_s</i> and <i>K_p</i> indices	332
2.5 The equivalent three-hourly range indices <i>ak</i> , <i>ap</i> and daily indices <i>Ak</i> and <i>Ap</i>	333
2.6 The <i>C_p</i> index	336
2.7 Classification of days	336
2.8 <i>K_m</i> , <i>K_n</i> , <i>K_s</i> and <i>am</i> , <i>an</i> , <i>as</i> indices	339
2.9 The <i>aa</i> index	341
2.10 Auroral electrojet activity indices <i>AE</i> , <i>AL</i> , <i>AU</i> and <i>AO</i>	342
2.11 The <i>Dst</i> index	346
2.12 Derivation of the present <i>Dst</i> index	347
3 Indices of magnetic pulsations	349
3.1 The <i>P</i> index	350
3.2 The <i>B</i> index	350
3.3 The <i>P1-P12</i> indices	351
3.4 The <i>Pz</i> index	351
4 Other miscellaneous indices	352
4.1 The <i>Q</i> index	352
4.2 The <i>R</i> index	352
4.3 The <i>U</i> and <i>U1</i> indices	353
4.4 The <i>W</i> index	353
4.5 Indices of equatorial electrojet (EJ) and counter-electrojet (CEJ)	354
4.6 The <i>DR</i> indices for the equatorial ring-current field	355
4.7 Recurrence index of geomagnetic activity	356
4.8 The <i>A/T</i> index of interplanetary magnetic-field polarity	356
5 Geomagnetic-activity indices in the physics of the magnetosphere	357
5.1 Periodicities in geomagnetic activity	357
5.2 <i>K_p</i> , <i>Ap</i> and <i>AE</i> dependence on solar-wind velocity and variability of the IMF	361
5.3 Statistical studies of <i>AE</i> and <i>Am</i> dependence on the solar wind and the IMF	364
5.4 <i>Dst</i> dependence on the solar wind and the IMF	369
5.5 Response of geomagnetic activity to the polarity and azimuthal components (<i>B_x</i> and <i>B_y</i>) of the IMF	370
5.6 North-south asymmetry in geomagnetic activity	371
5.7 Geomagnetic activity as a predictor of solar activity and solar-wind velocity	372
5.8 Geomagnetic pulsations as a diagnostic tool for the magnetosphere and interplanetary medium	372
5.9 Interplanetary scintillation and geomagnetic activity	376
6 Concluding remarks	376
References	376

6 The Regular Geomagnetic-Field Variations During Quiet Solar Conditions	385
WALLACE H. CAMPBELL	
1 Field variations during quiet solar conditions	385
1.1 Characteristics of quiet-day variations	387
1.2 The ionospheric dynamo currents	394
1.3 Analysis of Sq	404
1.4 Ionospheric current-source behaviour	423
2 Earth conductivity from geomagnetic records	434
2.1 Introduction	434
2.2 Upper-mantle conductivity from Sq analysis	438
3 Geomagnetic response to lunar tidal changes	443
3.1 Historical notes	443
3.2 The L2 currents and fields	444
4 Eclipse and flare effects	449
4.1 General features	449
4.2 Ionospheric-current effects of eclipses	449
4.3 Ionospheric-current effects of solar flares	451
References	454
7 The Equatorial Electrojet: Magnetic and Ionospheric Effects	461
R. G. RASTOGI	
1 Introduction	461
2 Global geomagnetic-field variations	465
3 Characteristics of the equatorial electrojet	467
3.1 Lunar modulations of the equatorial electrojet	470
3.2 <i>In situ</i> rocket measurements of the equatorial electrojet current	471
3.3 VHF radar exploration of the equatorial electrojet	471
3.4 Ionospheric drifts in the electrojet region by spaced-receiver HF systems	474
3.5 Equatorial-electrojet conductivities and models	476
4 The equatorial electrojet and the equatorial sporadic E layer	478
4.1 <i>In situ</i> rocket measurements of equatorial-electrojet irregularities	479
4.2 The equatorial sporadic E layer during magnetic disturbances	481
5 The equatorial counter-electrojet	482
6 Equatorial-electrojet and interplanetary parameters	485

7 The equatorial electrojet and Sq	494
8 The equatorial electrojet and solar-flare effects	497
9 Geomagnetic-storm effects on the equatorial electrojet	499
10 The equatorial electrojet and solar eclipses	508
11 The equatorial electrojet and the F2 layer	509
12 The equatorial electrojet and spread F	513
Acknowledgements	515
References	516
