## Contents

Presentation . . . . .	VIII
Preface . . . . .	IX
<b>1 Fundamental concept of heat transfer . . . . .</b>	<b>1</b>
1.1 Temperature . . . . .	1
1.2 Heat . . . . .	2
1.3 Storage of heat . . . . .	2
1.4 Heat conduction . . . . .	4
1.4.1 Heat conduction in isotropic solids . . . . .	4
1.4.2 Heat conduction in anisotropic solids . . . . .	6
1.4.3 Differential formulation of the equation of heat conduction . . . . .	8
1.5 Heat radiation . . . . .	11
1.6 Heat convection . . . . .	14
1.7 Initial and boundary conditions . . . . .	17
1.8 Dimensionless quantities . . . . .	21
1.9 References . . . . .	23
<b>2 Thermal conditions of the earth's interior . . . . .</b>	<b>24</b>
2.1 Speculations about thermal properties . . . . .	24
2.2 Terrestrial energy sources . . . . .	27
2.2.1 Heat from radioactivity . . . . .	27
2.2.2 Gravity as a heat source . . . . .	30
2.2.3 Heat sources of minor importance . . . . .	30
2.3 Energy loss from the earth's interior . . . . .	31
2.3.1 Terrestrial heat flow . . . . .	31
2.3.2 Heat loss by volcanism . . . . .	38
2.3.3 Energy release from earthquakes . . . . .	40
2.3.4 Comparison of the various kinds of terrestrial energy . . . . .	41
2.4 Temperatures in the earth's interior . . . . .	42
2.4.1 Distribution of radioactive heat sources . . . . .	42
2.4.2 Temperatures in the deep interior . . . . .	45
2.5 References . . . . .	50
<b>3 Thermal conditions of the earth's crust . . . . .</b>	<b>51</b>
3.1 Thermal properties of the crust . . . . .	52
3.1.1 Thermal conductivity . . . . .	52
3.1.2 Specific heat . . . . .	58
3.1.3 Thermal diffusivity . . . . .	59

3.2	Temperature and thermal processes in the crust . . . . .	60
3.2.1	Underground temperatures in geothermally undisturbed areas . . . . .	60
3.2.2	Deformations and magma intrusions in the crust . . . . .	65
3.2.3	Physical processes and geological conditions in geothermal areas . . . . .	73
3.2.4	Surface temperature and its influence upon the temperatures in the subsurface . . . . .	83
3.2.5	Corrections for topography, sedimentation and denudation . . . . .	95
3.3	Influence of technical operations . . . . .	107
3.3.1	Temperature in mines . . . . .	107
3.3.2	Temperature rise due to the disposal of radioactive wastes into the subsurface . . . . .	117
3.4	References . . . . .	122
<b>4</b>	<b>Practical application of geothermics . . . . .</b>	<b>124</b>
4.1	Equipment . . . . .	124
4.1.1	Thermometers . . . . .	124
4.1.2	Thermal conductivity measurements . . . . .	126
4.1.3	Calorimeter . . . . .	130
4.1.4	Deep sea instruments . . . . .	131
4.2	Exploration of geothermal power . . . . .	134
4.2.1	Economics of geothermal energy . . . . .	136
4.2.2	Study of surface manifestations . . . . .	138
4.2.3	Geophysical surveys and investigations in shallow bore holes . . . . .	141
4.2.4	Deep exploratory drilling . . . . .	148
4.3	Groundwater and other hydrological problems . . . . .	150
4.3.1	Naturally heated groundwater with special reference to prospecting for hot springs . . . . .	150
4.3.2	Shallow aquifers . . . . .	157
4.3.3	Submarine springs . . . . .	161
4.3.4	Percolating dams . . . . .	162
4.3.5	Leaking pipelines . . . . .	164
4.4	Prospecting for miscellaneous deposits . . . . .	166
4.4.1	Sulphide ores . . . . .	166
4.4.2	Radioactive ores . . . . .	169
4.4.3	Salt domes . . . . .	171
4.4.4	Oil and gas accumulation . . . . .	174
4.4.5	Geothermal brine deposits . . . . .	176
4.5	References . . . . .	181
<b>5</b>	<b>Geothermal investigations in deep wells . . . . .</b>	<b>182</b>
5.1	Temperature disturbances due to drilling operations . . . . .	183
5.2	Location of cement tops . . . . .	188
5.3	Gas release in wells . . . . .	190
5.4	Evaluation of hydraulic fracturing . . . . .	194
5.5	Evaluation of acid treatment . . . . .	195
5.6	Location of water entry . . . . .	196
5.7	Location of lost circulation . . . . .	197
5.8	Control of water injection . . . . .	197
5.9	Correlation of geothermal gradients with rock formations . . . . .	198
5.10	Hydrologic applications . . . . .	199
5.11	References . . . . .	202

<b>6</b>	<b>Tables . . . . .</b>	<b>203</b>
6.1	List of symbols . . . . .	203
6.2	Conversion tables . . . . .	205
6.2.1	Length, area, volume, mass, weight, density and pressure . . . . .	205
6.2.2	Thermal conductivity . . . . .	205
6.2.3	Specific heat . . . . .	206
6.2.4	Coefficient of heat transfer . . . . .	206
6.2.5	Heat flow . . . . .	207
6.2.6	Conversion of different energy units . . . . .	207
6.2.7	Conversion factors for heat generation . . . . .	206
6.3	Thermal properties of rocks from 0—50 °C . . . . .	208
6.3.1	Igneous and volcanic rocks . . . . .	208
6.3.2	Metamorphic rocks . . . . .	210
6.3.3	Sediments . . . . .	211
6.3.4	Minerals . . . . .	211
6.4	Temperature effect on the thermal behaviour of rocks . . . . .	212
6.4.1	Thermal conductivity . . . . .	212
6.4.2	Specific heat . . . . .	215
6.4.3	Thermal diffusivity . . . . .	215
6.5	Change in thermal conductivity of rocks with pressure in one direction . . . . .	216
6.6	Anisotropy of thermal conductivity of rocks . . . . .	218
6.7	U, Th, K content and radiogenic heat generation of rocks . . . . .	219
6.7.1	Ultramafic rocks . . . . .	219
6.7.2	Igneous rocks . . . . .	220
6.7.3	Sedimentary rocks and sediments . . . . .	221
6.8	Thermal parameters of ice, water and dry air . . . . .	222
6.8.1	Ice . . . . .	222
6.8.2	Water . . . . .	223
6.8.3	Dry air . . . . .	224
6.9	References . . . . .	225
	Bibliography . . . . .	226
	Subject Index . . . . .	235
