### **1 Physical properties of ice, glacier dynamics and thermodynamics**

1.1 Introduction	1
1.2 Physical properties: structure and composition of ice	1
1.3 Deformational behaviour: creep	2
1.3.1 Single crystals	3
1.3.2 Polycrystalline ice	3
1.3.3 Creep of natural ice	4
1.3.4 Discussion	5
1.3.5 Impurities and creep	6
1.4 Large-scale ice dynamics (motion in glaciers and ice sheets)	7
1.4.1 Creep velocity ( $U_c$ )	7
1.4.2 Basal sliding velocity ( $U_s$ )	10
1.4.3 Complications to sliding theory	13
1.5 Thermodynamic processes	14
1.5.1 Simple temperature distribution in a slab glacier with no motion	14
1.5.2 Temperature in a moving ice sheet or glacier	15
1.5.3 Simple temperature distribution in a moving ice mass with accumulation and ablation	15
1.5.4 Temperature control of erosion and sedimentation	17
1.6 Transient flow phenomena: surging behaviour	17
<b>2 Water in glaciers</b>	20
2.1 The role of meltwater	20
2.2 Sources of water in glaciers and ice sheets	21
2.2.1 Surface melting	21
2.2.2 Dissipation of mechanical heat	21
2.2.3 Geothermal heat	21
2.2.4 Groundwater flow and surface runoff	21
2.2.5 Liquid precipitation	21
2.3 Location and flow of water at and from the glacier surface	21

2.4 Location and flow of water at and from the glacier bed	23
2.4.1 Water layers and films	24
2.4.2 Cavities	25
2.4.3 Channels and conduits	25
2.5 Lakes	28
2.6 Discharge of meltwater from glaciers and ice sheets	29
2.7 Sudden, high-magnitude discharge events (Jökulhlaups)	31
<b>3 Glacial erosion: subglacial bedrock failure by crushing and fracture</b>	33
3.1 Introduction	33
3.1.1 Mechanisms of glacial erosion	33
3.2 Subglacial bedrock crushing and fracture	34
3.2.1 Rock strength and applied loads	35
3.2.2 Rock strength and resistance to failure	36
3.3 Patterns of loading in bedrock	38
3.3.1 Elastic contact between clasts and bedrock	38
3.3.2 Plastic contact between clasts and bedrock	40
3.3.3 Large-scale bedrock stress patterns	41
3.4 Modes of failure	42
3.4.1 Mohr-Coulomb failure	42
3.4.2 Cyclic loading and fatigue failure	43
3.4.3 Macroscopic consideration of fracture and failure	43
3.4.4 Crack propagation and fast fracture	44
3.5 Evacuation of crushed and fractured rock	45
3.5.1 Heat pump (Robin effect)	46
3.5.2 Hydraulic jack effect	46
3.5.3 Evacuation by water	47
<b>4 Glacial erosion: abrasional wear</b>	48
4.1 Introduction	48
4.2 Abrasion by 'pure' ice	48
4.3 Abrasion by rock particles in sliding basal ice: a first simple model	49

4.3.1 The single asperity	50	5.8 Carbonation	78
4.4 Components of the simple abrasion model	51	5.8.1 Subglacial dissolution-precipitation dynamics	78
4.4.1 Hardness and clast-bed friction	52	5.9 Cation exchange	79
4.4.2 Debris concentration ( $C_o$ )	53	5.9.1 Exchange between meltwater and suspended particles	80
4.4.3 Clast velocity ( $U_p$ )	54	5.10 Discharge of solutes in glacial meltwater	80
4.4.4 Effective contact force (F)	55	5.10.1 Measurement of TDS	80
4.4.5 Removal of fines	58	5.10.2 Temporal variations	81
4.4.6 Discussion	58		
4.5 Application of the Boulton-Hallet theories	58		
4.6 Abrasion by cold ice	61		
<b>5 Mechanical and chemical erosion by glacial meltwater</b>	<b>63</b>	<b>6 Glacial erosion: process rates and rankings</b>	<b>83</b>
5.1 Introduction	63	6.1 Introduction	83
5.2 Mechanical erosion by glacial meltwater	63	6.1.1 Effects of temperature and geotechnical properties	83
5.2.1 Hydrological variability	63	6.2 The erosion budget	83
5.2.2 Velocity characteristics	64	6.3 Direct estimates of erosion rates	84
5.2.3 Viscosity-temperature effects	64	6.3.1 Measured abrasion rates	84
5.2.4 Mechanisms of erosion	64	6.3.2 Measured rates of bed crushing and fracture	85
5.3 Abrasive erosion of bedrock channels	64	6.3.3 Measured rates of mechanical and chemical meltwater erosion	86
5.3.1 Abrasion by impinging suspended particles	64	6.4 Indirect estimates of glacial erosion rates	86
5.3.2 Abrasion by bedload transport	67	6.4.1 $SQ_w$ : discharge of sediments in meltwater	87
5.4 Cavitation erosion	68	6.4.2 $SQ_m$ : discharge of sediments in ice	88
5.4.1 Bernoulli equation	69	6.4.3 Average chemical erosion by meltwater	89
5.4.2 Cavitation condition	69	6.5 Conclusions	90
5.4.3 Factors affecting cavitation	70		
5.4.4 Cavitation damage	70		
5.5 Chemical erosion by glacial meltwater	73	<b>7 Entrainment and characteristics of sediments in ice</b>	<b>91</b>
5.5.1 Chemical composition of glacial meltwater	73	7.1 Introduction	91
5.6 Solute sources	74	7.2 Subglacial entrainment mechanisms	91
5.6.1 Precipitation	74	7.2.1 Regelation	92
5.6.2 Firn and ice	75	7.2.2 Ice-debris accretion	93
5.6.3 Surface runoff and groundwater	76	7.2.3 Block incorporation	93
5.6.4 Exchange between meltwater and the atmosphere	76	7.2.4 Overriding	94
5.6.5 Solute enrichment of meltwater at the glacier bed	77	7.3 Super- and englacial entrainment mechanisms	94
5.7 Dissolution	77	7.3.1 Rockfall	94
		7.3.2 Avalanches	94
		7.3.3 Atmospheric precipitation	95
		7.4 Character of sediments: basal	97
		7.4.1 General disposition	97

7.4.2 Texture	99	9.7 Flow till: resedimentation processes	134
7.4.3 Debris concentration	100	9.7.1 Flow mobilization	134
7.4.4 Debris layer thickness	102	9.7.2 Sediment flow behaviour and depositional facies	137
7.5 Character of sediments: super- and englacial	103	9.7.3 Sediment flow fabrics	144
7.5.1 General disposition and comparison with basal sediment	103	9.7.4 Flow till and the sedimentation continuum	145
7.5.2 Texture	104	9.8 Lithofacies models	145
7.5.3 Debris concentration	106		
7.5.4 Debris layer thickness	106	<b>10 Glaci-fluvial processes and sedimentation</b>	<b>147</b>
<b>8 Transport and modification of sediments in ice</b>	<b>108</b>	10.1 Introduction	147
8.1 Migration of debris	108	10.2 Sediment in glacial meltwater	147
8.1.1 Vertical migration	108	10.3 Transport and discharge	148
8.1.2 Lateral migration	108	10.3.1 Suspended sediment	148
8.1.3 Glaci-tectonic processes and structures	110	10.3.2 Bed load	150
8.2 Changes in clast size: comminution	112	10.4 Sedimentation in glacier meltwater channels	150
8.2.1 Comminution of superglacial sediments	112	10.4.1 Deposition in tunnels	151
8.2.2 Comminution in the basal zone	114	10.4.2 Palaeohydraulic inference	154
8.2.3 Bimodal or multimodal grain-size distributions?	118	10.4.3 Ripple-drift cross-lamination	155
8.3 Changes in clast shape	120	10.4.4 Post-deposition modification	156
8.3.1 Striation and faceting	120	10.5 Sedimentation in pro-glacial meltwater channels	157
8.3.2 Rounding	120	10.5.1 Channel characteristics	158
8.3.3 Shape	121	10.5.2 Bedforms and internal structures	158
8.4 Fabric development	121	10.6 Facies associations and channel evolution	163
8.4.1 Englacial debris fabrics	121	10.6.1 Core facies	163
8.4.2 Basal debris fabrics	123	10.6.2 Lateral-distal facies	163
		10.6.3 Channel evolution	166
<b>9 Processes of till deposition and resedimentation</b>	<b>125</b>	<b>11 Glaci-lacustrine processes and sedimentation</b>	<b>167</b>
9.1 Introduction	125	11.1 Introduction	167
9.2 Deposition of basal sediments: lodgement	126	11.2 Physical processes in glacial lakes	167
9.2.1 Friction force	126	11.2.1 Density	167
9.2.2 Particle velocity: variable lodgement	127	11.2.2 Thermal conditions	168
9.2.3 Particle interference effects	127	11.2.3 Stratification	168
9.3 Lee-side cavity deposition	128	11.2.4 Circulation and water movement	170
9.4 Characteristics of lodgement and cavity tills	128	11.2.5 Water inflow and mixing	170
9.5 Basal melt-out	130	11.2.6 Over-, inter- and under-flow	172
9.5.1 Characteristics of basal melt-out tills	132	11.3 Chemical and biological processes in glacial lakes	174
9.6 Autochthonous deposition of surface melt-out sediments	133	11.4 Sedimentation	175

## Contents

11.4.1	Sediment input	175	13.5	Patterns of glaci-marine sedimentation	210
11.4.2	Settling of sedimentary particles	176	13.5.1	Suspended sediments	211
11.5	Facies characteristics	178	13.5.2	Lithofacies	212
11.5.1	Basin margin sedimentation	178	13.5.3	Sediment gravity flows	215
11.5.2	Lake floor sedimentation	179	<b>14</b>	<b>Glaci-marine processes and sedimentation: icebergs and sea ice</b>	217
11.5.3	Littoral sedimentation	183	14.1	Introduction	217
<b>12</b>	<b>Glaci-estuarine processes and sedimentation</b>	185	14.2	Iceberg calving, fragmentation and toppling	217
12.1	Introduction	185	14.3	Debris content of icebergs	219
12.2	Sources of sediment	185	14.4	Iceberg trajectories	220
12.3	Fjord hydrography and associated processes	187	14.5	Debris release from icebergs	222
12.3.1	Water stratification and estuarine circulation	187	14.5.1	Melt above the water line	222
12.3.2	Tidal effects	190	14.5.2	Sidewall melt at and below the water line	222
12.3.3	Coriolis effect	190	14.5.3	Melt at the iceberg base	223
12.3.4	Sediment input	190	14.5.4	Mechanical modes of debris release	224
12.3.5	Flocculation	191	14.6	Sedimentation and facies models	224
12.4	Pattern of glaci-estuarine sedimentation	192	14.7	Sedimentational processes associated with sea ice	225
12.4.1	Fjords and estuaries with tidewater glaciers	193	14.8	Entrainment of debris into sea ice	226
12.4.2	Fjords and estuaries with stream input	195	14.8.1	Frazil ice-debris suspensions	227
12.4.3	Biogenic sedimentation	195	14.8.2	Anchor ice	227
12.5	Facies models	198	14.8.3	Concentration of sediments in sea ice	228
12.5.1	Deposition by surging glaciers	200	14.9	Transport of sediments by sea ice and melt-out	228
<b>13</b>	<b>Glaci-marine processes and sedimentation: ice shelves and glacier tongues</b>	201	14.10	Sedimentary facies and models	229
13.1	Introduction	201	14.10.1	Inner shelf region	229
13.2	Sources of glacial sediment in sea water	203	14.10.2	Central and outer shelf region	230
13.3	Melting and freezing of ice shelves and ice tongues	204	14.10.3	Deepwater glaci-marine sedimentation	230
13.3.1	Ice-water-salt system	205	14.10.4	Seasonal variations	230
13.3.2	Freezing and melting rates	206	14.11	Seabed scouring by floating ice	231
13.3.3	Effects of pressure on thermal regime	206	14.11.1	Sea ice plough marks	231
13.4	Measurements and estimates of melting and freezing	208	14.11.2	Iceberg plough marks	235
13.4.1	Ice shelves	208	References		238
13.4.2	Ice tongues	210	List of symbols		257
