Introduction .....	1
Chapter 1: Legacy of the Ancients .....	9
Paramount influence of a compartmentalised knowledge (p.9) <b>Shifting of Coastlines; Coastal Alluviation and Erosion</b> (p.10) Ovid: eight lines of great resonance (p.10) Aristotle: the eternal slow permutation (p.13) Strato: an amazing uniformitarian text (p.15) Herodotus: Egypt, a former sea gulf (p.19) Strabo: marine submergence, ground upliftment (p.20) Erosion: why are there so few texts? (p.23) <b>Fossils: Limited Interest in by the Ancients</b> (p.25) <b>Terminological Heritage; its Limitations</b> (p.29) <b>Circulation of Water</b> (p.31) Underground rivers: facts and legends (p.31) Debate on sources (p.34) <b>Earthquakes and Volcanoes</b> (p.36) The facts (p.36) Explanations and their comparison (p.38) <b>Genetic Theories and Deluges</b> (p.42) Lucretius: natural formation of the globe (p.43) Genesis according to Ovid (p.45) Biblical genesis: a negative or positive influence? (p.46) The Flood: Ovid, Seneca and the Bible (p.48) <b>Conclusions for Part One</b> (p.51) A global failure, but enduring lessons (p.51).	
Chapter 2: The Middle Ages .....	57
<b>Dying out of Ancient Science</b> (p.58) Fathers of the Church: fossils, evidence of the Deluge (p.59) <b>Arab Miracle</b> (p.62) Brothers of Purity presage the Huttonian cycle (p.63) Avicenna: genesis of rocks, fossils and mountains (p.66). Book of Elements (p.68). Averroës reintroduces the true Aristotle (p.68) Other Arab contributions to medieval geology (p.69) <b>Brief Chinese Interlude</b> (p.69) <b>West European Middle Ages</b> (p.70) Albertus Magnus: ambiguous origin of fossils (p.70). Brief look at Parisian Scholasticism (p.73) Ristoro d'Arezzo: a great Tuscan naturalist (p.75). Pietro d'Abano: fossils engendered	

by the stars (p.78) Buridan and Albert of Saxony: height of rational audacity (p.79) Conclusions on medieval 'geology': its remarkable freedom (p.84) **General Conclusions on the Middle Ages** (p.87).

Chapter 3: The Renaissance..... 91

**General** (p.91) Printing revolution (p.91) Age of contradictions (p.92) **Two Outstanding Isolated Personalities: 1) Leonardo da Vinci** (p.95) A useless genius? (p.95) Leonardo da Vinci and erosion (p.97) Sedimentation and fossilisation (p.99) Some general ideas (p.105) **2) Bernard Palissy, the 'Simple Potter'** (p.108) Palissy and the origin of sources (p.109) Interpretation of fossils: Anatomy of a legend (p.110) The Real thought of Palissy (p.112) Extinct species, receptacles and layers (p.117) Additional data (p.120) **Commencement of Major Debate on Fossils** (p.122) Another historiographic legend (p.122) Museums (p.125) Terminology (p.130) Importance of similitudes;—Gesner (p.131) **Major Concurrent Themes on the Origin of Fossils** (p.135) Exposition by Fracastoro (p.135) Radical diluvialism: Luther (p.137) 'Soft' diluvianism: Alessandro degli Alessandri (p.139) Gradual displacement of seas: Cesalpino (p.143) *In situ* genesis of fossils: Goropius, a remarkable unknown (p.146) Fabio Colonna's refutation (p.154) Glossopetrae and 'freaks of nature' (p.157) **Agricola and the Science of Mining** (p.160) The *Bergbüchlein* (p.160) Agricola and his work (p.164). An amazing text on erosion (p.168) Origin of minerals (p.170) Ordered sequence of rocks (p.171) **Conclusion on the Renaissance** (p.172).

Chapter 4: The Seventeenth Century..... 174

**Scientific Revolution of the XVIIth Century** (p.174) **Descartes and the First 'Theory of the Earth'** (p.177) **Gassendi: Another Unknown** (p.183) Queries regarding the origin of stones and fossils (p.183) Gassendi, successor to Palissy? (p.188) **Steno: The Decisive Breakthrough** (p.190) Brief biography of a genius (p.190) The *Canis Carchariae*...: Great Innovation of Strata (p.192) **Steno's Prodrumus: The Great Founding Text of Geological Science** (p.199) 'Steno unrecognised': another grievous error (p.200) Analytic plan of the

*Prodrumus* (p.203) A masterpiece of inductive logic (p.213) Defining the central problem; preliminary propositions (p.215) **Earth's Strata: Rational Bases of Modern Geology** (p.219) Origin of mountains; birth of tectonics (p.224). **Steno's Crystallography, a Century Ahead of its Time** (p.227) Constancy of Angles (p.227) Monograph on Hematite: derivation by Truncation (p.228) Rock Crystal: mechanism of growth (p.234) 'Marcasite' and other crystals (p.236) **Tests of Shellfish and Their Fine Structure** (p.238) Other fossil objects (p.241) **Successive Aspects of Tuscany in the Past** (p.245) Deduction of past geological history from its present state (p.245) Variance between evidence of Nature and the Scriptures (p.249) Rational explanation of the Deluge (p.252) Recent transformations in landscape (p.254) Steno's geology and modern data (p.256) **The Mystery of Steno** (p.259) Conclusion (p.261).
