Chapman and Hall

Contents

<i>Preface</i>	ix
1 Oil and gas properties	1
1.1 Introduction	1
1.2 Composition	1
1.3 Single-component behavior	4
1.4 Behavior of hydrocarbon mixtures: the phase envelope	9
1.5 Natural gas properties	12
1.6 Crude-oil properties	17
1.7 PVT tests	20
2 Properties of the environment	24
2.1 Introduction	24
2.2 Requirements for a reservoir: some typical traps	24
2.3 Oilfield waters: capillary pressure and water saturation	28
2.4 Compressibility of porous media	33
2.5 Initial pressures and pressure gradients	36
2.6 Fracturing of rock under stress	39
2.7 Reservoir temperature	43
3 Volumetric-balance equations	45
3.1 Introduction	45
3.2 The general form of the MBE	45
3.3 Gas reservoirs	53
3.4 Production from undersaturated oil field	57
3.5 Water encroachment	58
3.6 Volumetric-balance equation applied at pump intake	63
4 Liquid movement through the formation	67
4.1 Introduction	67
4.2 Potential and pressure in fluid flow	67
4.3 Permeability	71
4.4 The question of units	73
4.5 The radial-diffusivity (continuity) equation	73

4.6	Steady-state flow: no net withdrawal	77
4.7	Semi-steady-state flow: no replacement of withdrawals	78
4.8	Transient flow: the non-equilibrium of theis equation	81
4.9	Summary of Flowing BHP behavior	87
4.10	Permeability variations and permeability averaging	91
4.11	The flow of more than one fluid: effective and relative permeabilities	95
5	Maximizing the recovery	98
5.1	Introduction	98
5.2	The frontal-advance-rate formula	99
5.3	Mobilization efficiency, displacement efficiency, and economic efficiency	109
5.4	Areal-sweep efficiency	110
5.5	Vertical-sweep efficiency	114
5.6	Mobility ratio	128
5.7	Overall recovery efficiency	130
5.8	Thermal recovery methods	131
5.9	Miscible drives	135
5.10	Postscript	137
6	Analysis of oil-well test results: single-fluid flow	139
6.1	Introduction	139
6.2	Superposition and the method of images	139
6.3	Skin factor	142
6.4	Drawdown tests	144
6.5	Pressure-buildup analysis	154
6.6	Productivity index	161
6.7	Flow efficiency	162
7	Analysis of gas-well test results	166
7.1	Introduction	166
7.2	The radial-diffusivity equation for gas wells	166
7.3	Gas-flow equations, based on the diffusivity equation	170
7.4	Non-Darcy flow	175
7.5	Multiple-rate drawdown tests: non-stabilized flow conditions	177
7.6	Multiple-rate drawdown tests: isochronal and p^2 -plot methods	186
7.7	The Mishra-Caudle curves	190
8	Analysis of well-test results: two-phase flow	200
8.1	Introduction	200
8.2	Modifying the radial-flow formulas	201
8.3	Influence of free gas in the formation	202
8.4	The IPR: solution-gas-drive reservoirs	204
8.5	Future IPRs: solution-gas-drive reservoirs	212

8.6	The effect of skin on the IPR: solution-gas-drive reservoirs	217
8.7	Effect of formation stratification	226
9	Flow to the surface	236
9.1	Introduction	236
9.2	Flow through pipes (incompressible fluid)	236
9.3	Gas flow through vertical tubing	240
9.4	Multiphase flow in tubing	242
9.5	The correlations: vertical two-phase flow	249
9.6	Annular-flow gradients	252
9.7	Inclined pipe: deviated holes	254
9.8	Gradient-curve families	255
9.9	Gas flow as limiting case of two-phase flow	259
10	Flowing-well performance	261
10.1	Introduction	261
10.2	Tubing-head pressure curves and tubing-performance curves	262
10.3	The effects of tubing diameter	263
10.4	Surface control	266
10.5	Flowing-well performance	272
10.6	Production-rate and maximum-rate decline curves	277
10.7	Identification of changes in a well's productive capacity	286
10.8	Wet gas wells	288
11	Artificial lift: gas lift	293
11.1	Introduction	293
11.2	General considerations	293
11.3	Applications of gas lift	296
11.4	Some rules of thumb: continuous gas lift	297
11.5	Locating the bottom valve: continuous gas lift	298
11.6	Gas-injection rate for maximum profit	305
11.7	Gas-lift valves	307
11.8	Gas-lift string design	312
11.9	Intermittent gas lift	316
12	Artificial lift: electric submersible and hydraulic pumps	322
12.1	Introduction	322
12.2	The electric submersible pump (ESP)	323
12.3	Pumps with hydraulic drive	342
12.4	Overview of artificial-lift systems	351
Appendix: conversion factors		355
Suggestions for further reading		357
Index		360
