| List of abbreviations..... | 341 |

The principal activities of IAH are to:

- * Promote international interest among scientists in hydrogeologic studies.
- * Sponsor hydrogeologic meetings. IAH has held more than 23 scientific conferences in the past 20 years.
- * Publish hydrogeologic reports. For example: Karst Hydrogeology, 1977; Hydrogeology of Great Sedimentary Basins, 1976; Hydrogeological Map of Europe, and Methods for Evaluation of Ground Water Resources, 1979.
- * Establish commissions to investigate topics of concern to hydrogeologists. The work of IAH is accomplished by several special Commissions.

During a meeting of the Karst Commission of the International Association of Hydrogeologists (IAH) in Cambridge, England, on September 8, 1965, the Association voted to issue the third volume of the Annotated Bibliography in the Spring of 1966, and additional volumes of the bibliography every other year. This bulletin represents the first of this new series of IAH bulletins on karst terrain.

The two previous karst bibliographies, Bulletins 59A and 59B of the Alabama Geological Survey, were published under the direction of Philip E. LaForsaux who was at that time State Geologist of Alabama. The Alabama Geological Survey was contacted, and by letter, released future rights to publish the bibliography to the Karst Commission of IAH. 1/

1/ July 23, 1965, letter to Dr. P. E. LaForsaux from Ernest A. Mancini, State Geologist and Oil and Gas Supervisor of Alabama.
