
INTRODUCTION TO GEOCHEMISTRY

Second Edition

Konrad B. Krauskopf

*Professor of Geochemistry Emeritus
Stanford University*

INTERNATIONAL STUDENT EDITION

McGRAW-HILL BOOK COMPANY

Auckland Bogotá Guatemala Hamburg Johannesburg Lisbon
London Madrid Mexico New Delhi Panama Paris
San Juan São Paulo Singapore Sydney Tokyo

CONTENTS

	Preface	xi
1	Chemical equilibrium	1
1-1	The "Law of Mass Action"	2
1-2	An Example of Equilibrium: Hydrogen Chloride	4
1-3	The Effect of Temperature	7
1-4	A Second Example: Carbon Dioxide in Water	9
1-5	A Third Example: Calcium Sulfate	10
1-6	Le Chatelier's Rule	15
1-7	Stability	16
1-8	Conventions	18
1-9	A Word about Problem Solving	18
2	Acids and Bases	23
2-1	Chemical Definitions	23
2-2	Geologic Usage	25
2-3	The pH	26
2-4	Dissociation Constants of Weak Acids	28
2-5	Dissociation Constants of Hydroxides	33
2-6	Dissociation Constants of Salts	35
2-7	Hydrolysis	36
2-8	Estimating Ionic Concentrations	40
2-9	Carbonate Equilibria	43
2-10	Buffers	46

3	Carbonate Sediments	51
3-1	Calcium Carbonate: Solubility Calculations	51
3-2	Calcite and Aragonite	55
3-3	Supersaturation	56
3-4	Effect of Grain Size on Solubility	57
3-5	The Effect of Other Electrolytes: Activity and Activity Coefficient	58
3-6	Ion Association: Formation of Complexes	62
3-7	Effect of Organisms on Solubility	63
3-8	Precipitation of CaCO_3 in Seawater	64
3-9	Other Simple Carbonates	66
3-10	The Dolomite Problem	70
3-11	Calcium Phosphate	72
	Summary	76
4	Chemical Weathering	79
4-1	General Nature of Weathering Reactions	79
4-2	Changes in Rock Composition	80
4-3	Sequence of Mineral Alteration	83
4-4	Agents of Chemical Weathering	85
4-5	Solution and Hydration	86
4-6	Weathering of Carbonates	87
4-7	Oxidation	87
4-8	Hydrolysis of Silicates	91
4-9	Environments of Weathering	93
5	Structural Chemistry	98
5-1	Structure of NaCl	99
5-2	Other Ionic Solids	102
5-3	Covalent Bonds	105
5-4	Electronegativity	107
5-5	General Rules about Bond Type	109
5-6	Silicate Structures	110
5-7	Isomorphism	113
5-8	Substitution	115
5-9	Polymorphism	116
6	Colloids	120
6-1	Definitions	120
6-2	Kinds of Colloidal Systems	121
6-3	Properties of Colloids	122
6-4	Electric Charges on Colloidal Particles	124
6-5	Ion Exchange	127
6-6	Stability of Colloids	130
6-7	Silica as a Chemical Sediment	132
6-8	Clay Minerals as Colloids	135
6-9	Geologic Evidences of Former Colloids	136

7	Clay Minerals and Soils	140
7-1	Structure	140
7-2	Classification of Clay Minerals	147
7-3	Relation of Structure to Properties	148
7-4	Formation of the Clay Minerals	149
7-5	Stability of the Clay Minerals	152
7-6	Formation of Soils	159
7-7	Classification of Soils	160
8	Free Energy	165
8-1	Change in Enthalpy	165
8-2	Change in Equilibrium Constants with Temperature	168
8-3	Change of K with Temperature when ΔH Is Not Constant	171
8-4	Enthalpy Change as a Measure of Reactivity	172
8-5	Free Energy: Definition	173
8-6	Free Energy: Conventions and Qualifications	176
8-7	Free Energies of Formation	177
8-8	Free Energy as a Criterion of Equilibrium	178
8-9	Relation of Free-Energy Change to Equilibrium Constant	179
8-10	Free-Energy Changes for Activities Other than Unity	181
8-11	Free-Energy Changes at Other Temperatures	181
8-12	Free-Energy Changes at Other Pressures	183
8-13	Uses and Limitations of Free-Energy Calculations	183
8-14	Chemical Potential, Fugacity, and Activity	185
9	Oxidation Potentials and Eh-pH Diagrams	191
9-1	Oxidation Potentials	191
9-2	Relation of Oxidation Potential to Free Energy	195
9-3	Redox Potentials	196
9-4	Limits of pH and Eh in Nature	198
9-5	Eh-pH Diagrams	200
10	Oxidation and Reduction in Sedimentation	211
10-1	Iron Sediments	211
10-2	Manganese Sediments	214
10-3	The Separation of Manganese from Iron	217
10-4	Sulfur Sediments	219
10-5	Other Oxidation-Reduction Processes	227
11	Organic Material in Sediments	230
11-1	The Chemistry of Carbon Compounds	230
11-2	Organic Reactions	240
11-3	Carbon in Rocks	243
11-4	Origin of Petroleum	245
11-5	Origin of Coal	249
11-6	Organic Matter in Black Shales	250
11-7	Carbon Compounds as Reducing Agents	253

12	Evaporites	258	17	Ore-forming Solutions	387
12-1	Soluble Material in Streams	258	17-1	Metal Compounds in Magmatic Gases	388
12-2	Salt Deposits in Arid Regions	260	17-2	Hydrothermal Solutions: The Dilemma	393
12-3	The Composition of Seawater	262	17-3	Hydrothermal Solutions: Geologic Data	395
12-4	Geologic Data on Marine Evaporite Deposits	264	17-4	Hydrothermal Solutions: Possible Answers	405
12-5	Usiglio's Experiment	268	17-5	General Reflections	409
12-6	Physical Chemistry of Salt Deposition	269	18	Oxidation of Ore Deposits	413
12-7	The Evaporation of Seawater	274	18-1	Oxidation of Sulfides	414
12-8	The Effect of Temperature	280	18-2	Solubilities of Oxidized Metal Compounds	416
12-9	Postdepositional Changes in Salt Beds	282	18-3	Eh-pH Diagrams for Weathering of Ore Deposits	418
	Summary	283	18-4	Supergene Sulfide Enrichment	421
13	The Phase Rule	287	18-5	Oxidation of Gold	424
13-1	Formulation of the Phase Rule	288	18-6	Oxidation of Uranium Ores	426
13-2	The Phase Rule Applied to Salt Crystallization	293	19	Metamorphism	432
13-3	Eutectics and Solid Solutions	294	19-1	Conditions of Metamorphism	433
13-4	Theoretical Crystallization Curves	298	19-2	Classification of Metamorphic Rocks	435
13-5	Complex Binary Systems	299	19-3	Equilibrium Relations	436
13-6	Ternary Systems	305	19-4	Metamorphic Facies	444
13-7	Additional Components	310	19-5	Examples of Experimental Studies on Metamorphic Reactions	449
	Summary	312	19-6	High-Pressure Facies	456
14	Crystallization of Magmas	314	19-7	Ultrametamorphism	458
14-1	Mafic Magmas	315	19-8	Metamorphic Differentiation	460
14-2	Magmatic Differentiation	319	20	Distribution of the Elements	464
14-3	Variation Diagrams	321	20-1	The Periodic Classification	464
14-4	Felsic Magmas	324	20-2	Goldschmidt's Geochemical Classification	467
14-5	Effect of Pressure on Differentiation	330	20-3	Distribution of Elements in Igneous Rocks	471
14-6	Origin of Basaltic and Granitic Magmas	333	20-4	Distribution in Sedimentary Rocks	481
14-7	Unusual Igneous Rocks	336	20-5	Distribution in Metamorphic Rocks	485
15	End Stages of Magmatic Crystallization	346	21	Isotope Geochemistry	488
15-1	Kinds of Evidence Available	346	21-1	Kinds of Isotopes	488
15-2	Phase Relations	347	21-2	Radioactive and Radiogenic Isotopes	489
15-3	The Critical Point	351	21-3	Strontium and Lead	499
15-4	Pegmatite and Aplite Dikes	359	21-4	Stable Isotopes of Low Atomic Number	504
15-5	Quartz-Sulfide Vein and Replacement Deposits	361	22	Historical Geochemistry	514
15-6	Recapitulation	364	22-1	The Composition of the Earth	515
16	Volcanic Gases	368	22-2	Origin of the Earth	519
16-1	Relation of Volatiles to Volcanic Activity	368	22-3	Early History	521
16-2	Gases from Fumaroles	370	22-4	Later Geochemical History of the Crust	525
16-3	Equilibrium Relations in Volcanic Gases	374	22-5	History of the Atmosphere	527
16-4	Sublimates	377	22-6	History of Seawater	532
16-5	Hot Springs	379	22-7	Some Larger Problems	534
16-6	Gases from Heated Rocks	381			
	Summary and Speculations	382			

	Appendixes	
I	Constants and numerical factors	541
II	Symbols, atomic numbers, and atomic weights of the naturally occurring elements	542
III	Average abundances of elements in the earth's crust, in three common rocks, and in seawater (in parts per million)	544
IV	Ionic radii and electronegativities	547
V	Large-scale data about the earth	550
VI	The geologic time scale	551
VII	Equilibrium constants	552
	<i>Table VII-1. Solubility products</i>	552
	<i>Table VII-2. Dissociation constants of acids</i>	554
	<i>Table VII-3. Dissociation constants of hydroxides</i>	555
	<i>Table VII-4. Equilibrium constants for complex ions and molecules</i>	557
VIII	Standard free energies, enthalpies, and entropies	558
IX	Standard electrode potentials	566
X	Balancing oxidation-reduction equations	569
XI	The thermodynamic background of geochemistry	572
XII	Answers to end-of-chapter problems	596
	Index	601
	Volcanic Gases	234
	Some Latest Problems	235
	History of Seawater	238
	History of the Atmosphere	239
	Late-Geochemical History of the Crust	239
	Early History	242
	Origin of the Earth	243
	The Composition of the Earth	244
	Historical Geochemistry	23
	Stable Isotopes of Low Atomic Number	234
	Strontium and Lead	237
	Radioactive and Radiogenic Isotopes	242
	Kind of Isotopes	244
	Isotope Geochemistry	23
	Distribution in Metamorphic Rocks	202
	Distribution in Sedimentary Rocks	204
	Distribution of Elements in Igneous Rocks	202
	Goldschmidt's Geochemical Classification	202
	The Periodic Classification	207
	Distribution of the Elements	20
	Metamorphic Differentiation	198
	Ullmann's Metamorphism	197
	High-Pressure Facies	199
	Examples of Experimental Studies on Metamorphic Reactions	197
	Metamorphic Facies	194
	Equilibrium Relations	196
	Classification of Metamorphism	196
	Conditions of Metamorphism	196
	Metamorphism	191
	Oxidation of Ore Deposits	550
	Oxidation of Solides	552
	Solubilities of Oxidized Metal Compounds	552
	Ep- <i>in situ</i> Diagrams for Weathering of Ore	552
	Oxidation of Gold	555
	Subaqueous Sulfide Enrichment	554
	Ore-forming Solutions	539
