<i>Abbreviations</i>	xxi
<i>Symbols</i>	xxiii
1 Introduction	1
1.1 Philosophy of tunnelling	1
1.2 Scope of this book	3
1.3 Historical context	3
1.4 The nature of the ground	6
1.5 Tunnel cross section terminology	7
1.6 Content and layout of this book	7
2 Site investigation	9
2.1 Introduction	9
2.2 Site investigation during a project	10
2.2.1 <i>Introduction</i>	10
2.2.2 <i>Desk study</i>	11
2.2.3 <i>Site reconnaissance</i>	11
2.2.4 <i>Ground investigation (overview)</i>	12
2.3 Ground investigation	13
2.3.1 <i>Introduction</i>	13
2.3.2 <i>Field investigations</i>	13
2.3.2.1 <i>Non-intrusive methods</i>	13
2.3.2.2 <i>Intrusive exploration</i>	18
2.3.3 <i>Laboratory tests</i>	31
2.4 Ground characteristics/parameters	41
2.4.1 <i>Influence of layering on Young's modulus</i>	44
2.4.2 <i>Squeezing and swelling ground</i>	45
2.4.3 <i>Typical ground parameters for tunnel design</i>	46

2.4.4	Ground (rock mass) classification	49
2.4.4.1	Rock Quality Designation	49
2.4.4.2	Rock Mass Rating	53
2.4.4.3	Rock Mass Quality Rating (Q-method)	54
2.4.4.4	A few comments on the rock mass classification systems	58
2.5	Site investigation reports	60
2.5.1	Types of site investigation report	60
2.5.2	Key information for tunnel design	61
3	Preliminary analyses for the tunnel	64
3.1	Introduction	64
3.2	Preliminary stress pattern in the ground	64
3.3	Stability of soft ground	66
3.3.1	Stability of fine grained soils	67
3.3.2	Stability of coarse grained soils	69
3.4	The coefficient of lateral earth pressure (K_0)	70
3.5	Preliminary analytical methods	73
3.5.1	Introduction	73
3.5.2	Bedded-beam spring method	74
3.5.3	Continuum method	74
3.5.4	Tunnel support resistance method	76
3.6	Preliminary numerical modelling	78
3.6.1	Introduction	78
3.6.2	Modelling the tunnel construction in 2-D	79
3.6.3	Modelling the tunnel construction in 3-D	81
3.6.4	Choice of ground and lining constitutive models	82
4	Ground improvement techniques and lining systems	84
4.1	Introduction	84
4.2	Ground improvement and stabilization techniques	84
4.2.1	Ground freezing	85
4.2.2	Lowering of the groundwater table	89
4.2.3	Grouting	90
4.2.4	Ground reinforcement	95
4.2.5	Forepoling	98
4.2.6	Face dowels	100
4.2.7	Roof pipe umbrella	101
4.2.8	Compensation grouting	102
4.2.9	Pressurized tunnelling (compressed air)	105

4.3	Tunnel lining systems	108
4.3.1	Lining design requirements	108
4.3.2	Sprayed concrete (shotcrete)	109
4.3.3	Ribbed systems	114
4.3.4	Segmental linings	115
4.3.5	In situ concrete linings	123
4.3.6	Fire resistance of concrete linings	125
5	Tunnel construction techniques	127
5.1	Introduction	127
5.2	Open face construction without a shield	128
5.2.1	Timber heading	128
5.2.2	Open face tunnelling with alternative linings	128
5.3	Partial face boring machine (roadheader)	129
5.4	Tunnelling shields	132
5.5	Tunnel boring machines	138
5.5.1	Introduction	138
5.5.2	Tunnel boring machines in hard rock	140
5.5.2.1	Gripper tunnel boring machine	140
5.5.2.2	Shield tunnel boring machines	145
5.5.2.3	General observations for hard rock tunnel boring machines	147
5.5.3	Tunnel boring machines in soft ground	150
5.5.3.1	Introduction	150
5.5.3.2	Slurry tunnelling machines	153
5.5.3.3	Earth pressure balance machines	158
5.5.3.4	Multi-mode tunnel boring machines	161
5.5.3.5	Choice of slurry or earth pressure balance tunnel boring machine	163
5.6	Drill and blast tunnelling	164
5.6.1	Introduction	164
5.6.2	Drilling	165
5.6.3	Charging	168
5.6.4	Stemming	169
5.6.5	Detonating	169
5.6.5.1	Detonating effect	169
5.6.5.2	Types of explosive	170
5.6.5.3	Detonators	172
5.6.5.4	Cut types	174
5.6.5.5	Explosive material requirements	180
5.6.6	Ventilation	180
5.6.7	Mucking and support	182

5.7	New Austrian Tunnelling Method and sprayed concrete lining	183
5.7.1	New Austrian Tunnelling Method	183
5.7.2	Sprayed concrete lining	187
5.7.3	LaserShell™ technique	192
5.8	Cut-and-cover tunnels	193
5.8.1	Introduction	193
5.8.2	Construction methods	193
5.8.3	Design issues	195
5.8.4	Excavation support methods (shoring systems) for the sides of the excavation	196
5.9	Immersed tube tunnels	201
5.9.1	Introduction	201
5.9.2	Stages of construction for immersed tube tunnels	203
5.9.3	Types of immersed tube tunnel	206
5.9.3.1	Steel shell	206
5.9.3.2	Concrete	206
5.9.4	Immersed tube tunnel foundations and settlements	209
5.9.5	Joints between tube elements	209
5.9.6	Analysis and design	211
5.9.7	Examples of immersed tube tunnels	213
5.10	Jacked box tunnelling	216
5.10.1	Introduction	216
5.10.2	Outline of the method and description of key components	216
5.10.3	Examples of jacked box tunnels	221
5.10.3.1	Vehicular under-bridge, M1 motorway, J15A, Northamptonshire, UK	221
5.10.3.2	I-90 Highway Extension, Boston, Massachusetts, USA	226
5.11	Pipe jacking and microtunnelling	230
5.11.1	Introduction	230
5.11.2	The pipe jacking construction process	231
5.11.3	Maximum drive length for pipe jacking and microtunnelling	235
5.12	Horizontal directional drilling	235
6	Health and safety, and risk management in tunnelling	244
6.1	The health and safety hazards of tunnel construction	244
6.1.1	Introduction	244
6.1.2	Hazards in tunnelling	245
6.1.3	Techniques for risk management	245

6.1.4	Legislation, accidents and ill health statistics	246
6.1.5	Role of the client, designer and contractors	247
6.1.6	Ground risk	248
6.1.7	Excavation and lining methods	249
6.1.8	Tunnel boring machines	249
6.1.9	Tunnel transport	250
6.1.10	Tunnel atmosphere and ventilation	250
6.1.11	Explosives	251
6.1.12	Fire, flood rescue and escape	251
6.1.13	Occupational health	252
6.1.14	Welfare and first aid	253
6.1.15	Work in compressed air	253
6.1.16	Education, training and competence	254
6.1.17	Concluding remarks	255
6.2	Risk management in tunnelling projects	255
6.2.1	Introduction	255
6.2.2	Risk identification	258
6.2.3	Analyzing risks	258
6.2.4	Evaluating risks	259
6.2.5	Risk monitoring and reviewing	259
7	Ground movements and monitoring	262
7.1	Ground deformation in soft ground	262
7.1.1	Surface settlement profiles	263
7.1.1.1	Estimating the trough width parameter, i	266
7.1.1.2	Volume loss	268
7.1.2	Horizontal displacements	269
7.1.3	Long-term settlements	270
7.1.4	Multiple tunnels	271
7.2	Effects of tunnelling on surface and subsurface structures	271
7.2.1	Effect of tunnelling on existing tunnels, buried utilities and piled foundations	272
7.2.2	Design methodology	276
7.3	Monitoring	280
7.3.1	Challenges and purpose	280
7.3.2	Trigger values	282
7.3.3	Observational method	283
7.3.4	In-tunnel monitoring during New Austrian Tunnelling Method tunnelling operations	285
7.3.4.1	Measurements	285
7.3.4.2	General development of displacements	287

7.3.4.3 Interpretation of the measurements: displacements	289
7.3.4.4 Interpretation of the measurements: comparative observation	291
7.3.4.5 Interpretation of the measurements: deformation	293
7.3.4.6 Interpretation of the measurements: stress-intensity-index	296
7.3.4.7 Measuring frequency and duration	298
7.3.4.8 Contingency measures	298
7.3.5 Instrumentation for in-tunnel and ground monitoring	304
7.3.6 Instrumentation for monitoring existing structures	307
8 Case studies	311
8.1 Eggetunnel, Germany	311
8.1.1 Project overview	311
8.1.2 Invert failure of the total cross section in the Eggetunnel	312
8.1.3 Sprayed concrete invert – its purpose and monitoring	314
8.2 London Heathrow T5, UK: construction of the Piccadilly Line Extension Junction	319
8.2.1 Project overview	319
8.2.2 The 'Box'	319
8.2.3 Construction of the sprayed concrete lining tunnels	321
8.2.4 Ground conditions	321
8.2.5 The LaserShell™ method	322
8.2.6 TunnelBeamer™	323
8.2.7 Monitoring	325
8.2.7.1 Existing Piccadilly Tunnel Eastside	325
8.2.7.2 Existing Piccadilly Tunnel Westside	325
8.3 Lainzer Tunnel LT31, Vienna, Austria	330
8.3.1 Project overview	330
8.3.2 Geology	333
8.3.3 Starting construction from the shafts	333
8.3.4 Side wall drift section: excavation sequence and cross section	334
8.3.5 Monitoring of the sprayed concrete lining of the side wall drift section	339
8.3.6 Cracks in the sprayed concrete lining	339

Appendix A: Further information on rock mass classification systems	345
A.1 Rock Mass Rating	345
A.2 Rock Mass Quality Rating (Q)	350
A.2.1 Use of the Q-method for predicting TBM performance	354
Appendix B: Analytical calculation of a sprayed concrete lining using the continuum method	356
B.1 Introduction	356
B.2 Analytical model using Ahrens <i>et al.</i> (1982)	357
B.3 Required equations and calculation process	358
B.4 Example for a tunnel at King's Cross Station, London	361
References and bibliography	368
Index	385
